"It will be observed by these tables that our trade in drills and sheetings is much larger than that of Great Britain. Another feature of these tables is the insignificant position of the import trade in English yarn, showing how the Bombay mills have cut into it.

"The Shanghai piece-goods market shows that stocks of gray shirtings, including English and Dutch, are abnormally large. On March 27 the quantity was 2,300,000 pieces, against 1,004,000 pieces for the corresponding period of last year. This is a very large increase, and it is to be noted that holdings of other staples are also larger.

"A remarkable expansion is reported in the export of nankeens from China, which are required by Chinese laborers abroad, who now find it as cheap to buy this more durable homespun cloth as the flimsy European fabrics.

"The formation of a Chinese company for the erection of cotton spinning and weaving factories in the province of Szu-chuan forms the basis of some comments by a correspondent of the London *Times*. Writing from Chung-king, on February 28, he remarks that the new commercial treaty with Japan, authorizing the importation of machinery and consequent establishment of factories upon a European scale, would seem to have determined the officials in the province (Szu-chuan) to try and forestall the movement from outside and do the work themselves. Two companies have already been started under purely Chinese auspices—one for the erection of cotton spinning and weaving mills, and one for the manufacture of matches, both with foreign machinery. Sites have been purchased a mile or more below the city, and on the opposite bank of the Yang-tsze, and work will be commenced as soon as the machinery is received from abroad. Of the capital for the cotton mills, 500,000 taels have already been found by the leading officials of Chung-king, and they are now calling upon the many wealthy merchants of the province to contribute the remaining 500,000 taels still required, the total capital being thus 1,000,000 taels, say $1,420,000. It still remains to be seen how far this call will be responded to."

BRITISH CONSULAR REPORTS.

The Manchester (England) *Courier* says: "The consular reports forwarded to the Foreign Office regarding American cotton crops are more than usually interesting documents. From Galveston we have a confirmation of the 'short crop' estimates for 1895–96, which created so much excitement earlier in the season, and the report considers it doubtful if the total crop will reach 7,000,000 bales. Texas, in particular, is responsible for the falling away. Under ordinary circumstances this state accounts for about 30 per cent. of the whole crop, and, with an average production of 7,000,000, its share should amount to 2,100,0000 bales. The present estimate, however, is 1,750,000, and, as a result, Galveston has suffered considerably. Notwithstanding this, Galveston remains the second cotton port in the United States, and Manchester people will not forget that they have, thanks to the local cotton association, enjoyed equal terms of freight with Liverpool from this great center for handling cotton. The British consul at New Orleans dwells upon the general features of the raw cotton trade during the last thirty years. Nor are the conclusions arrived at altogether satisfactory to this country. The consumption of cotton in Great Britain, it is true, has on the whole increased during the period dealt with, but the ratio of development cannot in any respect compare with that of our continenal rivals, who augmented their takings of American cotton from 1,700,000 bales in 1866–67 to 4,784,000 in 1893–94. While, too, European competition has become yearly more keen, the southern states have themselves become manufacturers as well as producers. In 1880 there were only 180 mills at work, 80 more were added during the next decade, but last year the number had sprung up to 435, and the cry is, 'still they come.' Thus, in five years the number of spindles in the south has nearly doubled, and now reaches a total of 3,177,310, while looms have increased from 38,865 to 70,874. Lancashire has thus cause to take advantage of every legitimate means by which she can maintain her position as head of the great textile industry. This is doubtless one of the reasons why importers of cotton are making fuller use of the ship canal. The Liverpool *Mercury* admits that substantial progress has been made in this direction. The prognostications of Liverpool brokers regarding higher freights to Manchester and difficulty in finding warehouse accommodation have been proved futile by the increasing import. 'Manchester has already secured nearly 20 per cent. of the whole of this season's import from Egypt, and the direct shipments of American are far in excess of the corresponding shipments of the previous year, despite the fact of the whole import into Lancashire being 500,000 bales less than last year.' Such an admission should be encouraging to Lancashire. It proves that spinners are awakening to the fact that all facilities for decreasing the cost of the raw material must be taken advantage of, and, despite temporary disturbance of trade, it is certain that Liverpool will ultimately gain by the general prosperity of the community."

Oregon Improvement REORGANIZATION.

NEW YORK, BOSTON, } May 29th, 1896.

To Holders of Certificates of Deposit representing bonds or stock of the Oregon Improvement Company deposited with the MANHATTAN TRUST COMPANY, New York, or the OLD COLONY TRUST COMPANY, Boston, under a preliminary agreement dated October 8, 1895, between such holders and the undersigned Committee, and to

Holders of First Mortgage Bonds,
Consolidated Mortgage Bonds,
Preferred Stock, and
Common Stock
of the Oregon Improvement Company.

The undersigned, who were appointed a Committee for the purpose, have perfected a plan for the reorganization of the Oregon Improvement Company, which has been accepted by the holders of a large amount of all classes of bonds and stock.

Copies of said Plan may be obtained on application to the MANHATTAN TRUST COMPANY, No. 10 Wall Street, New York City, or the OLD COLONY TRUST COMPANY, Ames Building, Boston (with each of which Companies is lodged a duplicate Agreement of Reorganization), or will be mailed to any holder of bonds or stock sending his address to either of said Trust Companies.

This plan provides for the issue of the following new securities:

1. First mortgage 5% 50-year gold bonds..$5,000,000
2. Four per cent. non-cumulative preferred stock..... 5,000,000
3. Common stock..... 9,000,000

By the terms of the Plan,

First mortgage bondholders receive in cash an amount equal to the coupons on such bonds maturing June 1, 1896, to wit, $30 per bond, and 110 per cent. of the principal of such bonds in new five per cent. bonds, bearing interest from June 1, 1896.

The new first mortgage bonds not set aside for the present firsts are to be issued at no greater rate than the rate of $100,000 par value of bonds per annum, and only for the purchase of new steamships and other needed property, which is to be added to the security for such bonds.

Holders of consolidated mortgage bonds who pay 12½ per cent. of the principal thereof, to wit, $125 per bond, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of the principal of such bonds in new preferred stock and 75 per cent. thereof in new common stock.

Holders of preferred stock who pay 12½ per cent. of the par thereof, to wit, $12.50 per share, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of par in new preferred stock and 75 per cent. of par in new common stock.

Holders of common stock who pay 10 per cent. of the par thereof, to wit, $10 per share, in four equal instalments, as provided in the Plan, receive 10 per cent. of par in new preferred stock and 50 per cent. of par in new common stock.

First mortgage bonds should be deposited, or if already deposited under said preliminary agreement of October 8, 1895, the certificates held therefor should be exchanged for reorganization receipts or certificates, at one of said Trust Companies, ON OR BEFORE JULY 1, 1896. On making such deposit or exchange the holders will receive in cash an amount equal to the interest coupons thereon maturing June 1, 1896, to wit, $30 per bond.

Consolidated mortgage bonds and preferred and common stock should be deposited, or if already deposited under said preliminary agreement, the certificates representing the same should be exchanged for reorganization receipts or certificates, at one of said Trust Companies on or before July 1, 1896.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 6, 1896.

Just at present the positions of the two leading national parties on the monetary question form the principal subject of conjecture. It is needless to say that on almost every hand the monetary issue is regarded as the important one of the campaign, and as is the case where there exists so wide a diversity of opinion as seems to prevail among delegates from different sections of the country on a point of this importance, there is a natural tendency on the part of political managers to endeavor to find the line of least resistance through the medium of a declaration framed to antagonize as few delegates as possible. In cases of this kind the process of compromise is rarely completed until the meeting of the convention, so that any forecasts as to the ultimate form of declaration must be in the nature of conjecture. So far the advocates of free coinage, who have shown considerable strength in the more recent conventions, have made far greater inroads in the Democratic than in the Republican ranks, and there is thought to be a possibility of their being able to secure a majority of the convention at Chicago, though not to dictate the choice of a candidate.

While the free coinage craze is running its course in the west and south organizations representative of commercial and financial interests are doing their best to direct attention to the importance of maintaining the existing gold standard of value. In resolutions adopted this week the Maritime Exchange of New York placed itself on record as advocating the existing gold standard, which is the same as that of the other great manufacturing and trading nations. Similar declarations have been made by other like bodies, and in connection with all of them the point is strongly insisted upon that the present agitation in respect to the monetary standard of the country and the uncertainty as to the course which may be pursued by our national legislators, are responsible for a considerable share of the contraction of business and the impairment of commercial and financial activity. The committee of the New York Chamber of Commerce on sound financial legislation submitted a report at the regular monthly meeting, held this week, in which it urged the members of the Chamber to aid in the work through correspondence with their customers and friends in the south and west. Missionary work of this kind should do some good, even though the range of its efficacy may be limited.

Ratifications of the Behring Sea Claims Arbitration treaty were exchanged in London on Wednesday. This treaty was ratified by the Senate seven or eight weeks ago, but the Senate amended its provisions in a few respects, a circumstance which called for the concurrence of the British authorities in the changes made. The treaty was negotiated in order to provide a means of settling the claims of British subjects for alleged illegal seizures of sealing vessels by cruisers of the United States. It provides for the appointment of a commission to consist of one member appointed by each government, and in case they cannot reach a conclusion then a third commissioner is to be appointed by the President of the Swiss republic. Whatever may be agreed upon by these commissioners is to be binding on the two governments, which are parties to the treaty. These are the principal provisions of the treaty as given out in Washington dispatches at the time of the negotiation of the treaty. It is expected that its text will be given out in a day or two, the publication being made simultaneously in Great Britain and the United States.

The prison authorities in New York have been giving some attention lately to the problem presented by the prison labor laws enacted by the late legislature, which, following the provisions of the new constitution, prohibit the sale of convict-made goods in the state. The new legislation provides that convicts shall be employed in the manufacture of various articles for the use of state institutions. The State Prison Commission has been endeavoring to secure from the various state institutions an estimate of the articles of prison manufacture which they may need, but has thus far received few estimates. In consequence the maturing of plans for the utilization of convict labor is delayed. It is understood that the existing legislation gives the commission authority to compel the purchase of prison-made goods by public institutions.

Representatives of the countries which have been supporting the Bureau of American Republics have had under consideration for some time new rules for the regulation of the bureau in connection with a programme for its work in the future. According to advices from Washington summarizing the proceedings had at the State Department, where the delegates have just been in session, the bureau under the new plan is to be considered as an international organization. The present force of employees will be continued during good behavior, but hereafter all vacancies are to be filled and promotions made after examination and nomination by a board appointed by the delegates themselves. A permanent executive committee is created, composed of five of the representatives of the American nations interested, which is to act as a board of supervision of the administration of the bureau and audit all accounts. The publications of the bureau in the form of monthly bulletins and handbooks and monographs are to continue. An important amendment of the existing rules of the bureau is an authorization conferred upon the director to arrange for the insertion of advertisements in the publications made by the bureau. This plan was suggested some time ago by the director of the bureau, on the ground that the practice was recognized by a number of nations and that it was economical and businesslike. The surplus of the publications of the bureau are to be sold at a price not to exceed the actual cost.

A conference at Lake Mohonk, N. Y., has been discussing the subject of international arbitration this week. Some of the addresses before the conference were more enthusiastic than critical, but several of the speakers recognized that the working out of a system of arbitration in practice was not free from difficulties. One speaker favored a court of conciliation rather than a court of final decision. Judge Earl, of New York, while conceding that in theory every possible question might be submitted to such a court, said that practically it would be wise to limit the jurisdiction of the tribunal at first, though its scope would gradually widen enormously, as has been the history of all kinds of courts. One plan submitted for the organization of an international tribunal suggested that the highest tribunal of each great civilized nation should name one member to compose the court. This would give an impartial body for the controversies of the world, and if any nation refused to obey its decisions, the other nations could at once withdraw their ministers and consuls, stop all intercourse with it, and close their ports to its commerce.

A tariff commission convention has been in session at Detroit this week, the main objects of the gathering being to secure the establishment of a commission to deal with the tariff schedules on a business basis and to further the use of the consular system as a means of increasing foreign trade. The attendance was less than was expected by the promoters of the organization, but it was explained that credentials had been received from many business organizations not represented by delegates. The convention adopted resolutions declaring in favor of taking the tariff question out of partisan politics, directing a committee to investigate the subject and frame a bill for the accomplishment of that purpose, and to present the same at the next convention of the association, recommending in general terms the placing of the consular service in the hands of men having knowledge of business and of international law, their compensation to be based on amounts of exports from the United States to their respective countries, as well as amounts of imports therefrom, and urging plans for the development of reciprocal trade with South America.

News from Hawaii lately has been neither frequent nor exciting. Advices from Honolulu, however, report that formal resolutions in favor of annexation by the United States have been passed unanimously by both houses of the legislature. This is a repetition of the former action of the two houses. The same advices that tell of this action of the Hawaiian legislature give the substance of an interview with President Dole, in which he declared that the extraordinary expenses of last year, growing out of the insurrection and cholera, for a time exhausted the surplus of the current revenue; but that the legislature is completing a provision which will undoubtedly yield a large surplus over all appropriations, and that a new loan of $800,000 will be placed on the Honolulu market at 5 per cent. President Dole declared that at no time since the revolution of 1893 has there been such an absence of political unrest as there is to-day.

No change seems to have occurred in the situation in Cuba recently. The revolution continues apparently unchecked. The Spanish forces appear to have made no more headway under Captain-General Weyler than under his predecessor. The conditions at present are unfavorable to the Spanish troops, who are unacclimated, and are sure to suffer more from disease than from the sword for some months to come. The Spanish authorities, however, appear as determined as ever to maintain their control over the island, and they are understood to have determined to send over large reinforcements at the close of the summer season. The interest of Congress in the situation in Cuba seems to have diminished somewhat of late, a circumstance which may be in part due to the attitude of the President.

MAY'S DECREASING BANK CLEARINGS.

May bank clearings show a heavy decrease, both from the preceding month and from May a year ago, and for the first time in more than a year the tendency towards a decrease seems to be impartially distributed over the country. That this unfavorable showing was no more than could be expected seems evident when general business this spring is considered. Bank clearings in May are usually of a very large volume, this being true alike in prosperous years and in other years, bank transactions during that month usually reflecting settlements on account of business done in months previous. This year, however, May clearings show a falling off from those of April, which has occurred only twice previously in thirteen years.

Total clearings at 69 cities for the month just closed aggregate $4,218,000,000, a decrease of 13 per cent. from May a year ago, and a falling off of 1.4 per cent. from April this year. This latter decrease is in sharp contrast with a year ago, when May clearings showed a gain over April of over 14 per cent. It should not be forgotten, however, that May a year ago witnessed a remarkable expansion in every line of trade, and this activity was reflected in very heavy bank clearings, the increase in May, 1895, over 1894 being fully 25 per cent. Compared with May, 1894, clearings this year show an increase of 8.7 per cent., while they show a falling off from May, 1893, the month of the industrial stock panic, of nearly 20 per cent. With the exception of May, 1894, the total clearings for the month just closed are the smallest reported in any May since 1886.

The following table of percentages of increase and decrease during the first five months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5
May	Dec. 13.0	Inc. 25.0	Dec. 26.3	Inc. 4.6
Five months	Inc. 1.9	Inc. 12.5	Dec. 30.2	Inc. 1.2

The decrease shown in May this year is not only the first reported this year, but is, in fact, the first falling off from the preceding year reported since July, 1894.

The showings made by the various groups of clearing house cities during May and the first five months of the year compare with preceding months as follows:

	Feb., 1896.	*March*, 1896.	*April*, 1896.	*May*, 1896.	*Five mos.* 1896.
New Engl'd.	Inc. 12.9	Dec. 1.5	Inc. .8	Dec. 8.4	Dec. .4
Middle	Inc. 25.3	Inc. 3.0	Inc. .3	Dec.16.0	Inc. 2.2
Western	Inc. 4.5	Inc. 4.0	Dec. 1.7	Dec. 9.5	Dec. .7
Northwestern	Inc. 8.8	Inc. .2	Inc. 7.6	Dec. 4.1	Inc. 2.8
Southwestern	Inc. 9.1	Dec. 4.0	Dec. 4.0	Dec.15.9	Dec. 3.9
Southern	Inc. 29.7	Inc. 11.9	Dec. 3.3	Dec. .6	Inc. 7.8
Far-western	Inc. 9.9	Inc. 1.1	Inc. 3.4	Dec. 2.7	Inc. 4.0
Totals	Inc. 20.3	Inc. 2.2	Inc. .9	Dec.13.0	Inc. 1.9
Canada	Inc. 14.1	Dec. 2.5	Inc. .5	Dec. 6.3	Inc. 1.0

Every group in the above table, it will be noted, reports a falling off in clearings in May this year from a year ago. The heaviest decrease occurs in the middle states, curtailed business and speculation alike at New York of course accounting for a good portion of the decrease. The falling off in the southwestern group is, however, almost as large as that in the middle states. The smallest decrease, a fraction of 1 per cent., is reported from the south.

When details by cities are considered, a marked tendency toward contraction is found. Of the 83 cities making comparisons with May a year ago only 27 show gains, fully two-thirds showing a falling off. The very general nature of this tendency to reduced clearings is another feature of this exhibit. In New England 5 of the 10 cities reporting show decreases, in the middle states 6 out of 9 show a falling off, in the central-west 12 out of 15, and in the northwest 11 out of 15 report losses. In the southwest only 1 out of 10 cities shows a gain, while in the south only 3 out of 14 totals increased.

Among larger cities, increases are confined to a few centers where special circumstances make enlarged bank operations. Prominent among them are gains of 7 per cent. at Pittsburgh and 5 per cent. at Cleveland, where the activity in the iron trade is credited with a favorable effect. At Buffalo, where manufacturing and other interests have been experiencing activity, the gain is nearly 5 per cent. At St. Paul the gain is over 9 per cent., and at Baltimore the increase is 4.5 per cent. At Omaha the heaviest gain is shown, 28 per cent., this being probably the reflection of favorable crop conditions in that city's territory. The list of cities reporting decreases is long, Detroit leading with a falling off of 28 per cent., and Louisville following with a decrease of 23 per cent. At New York and St. Louis the falling off is in the neighborhood of 17 per cent. in each instance. At Boston and at Indianapolis the rate of loss is almost the same, 8.8 per cent. Other decreases to be reported among the larger cities are those of Philadelphia, 9.4 per per cent.; Cincinnati, 12.9 per cent.; Minneapolis, 6.9 per cent.; Chicago and New Orleans, 5 per cent. each, and Kansas City, 13.7 per cent.

For the five months' period the total clearings at sixty-nine cities aggregate $21,277,749,614, an increase over a year ago of 1.9 per cent., a gain over 1894 of 14.7 per cent., but a decrease from 1893 of 20 per cent. Compared with a year ago the five months' totals by groups are a little more favorable than are those for May, four of the seven groups into which the exhibit is divided showing gains. The eastern, western and southwestern groups report decreases varying from less than 1 per cent. to nearly 4 per cent. The largest gain reported by any one group is that of the southern cities—7.8 per cent. In Canada the decrease for May is a trifle over 6 per cent., while the gain for the five months' period is about 1 per cent.

BANK CLEARINGS AT 87 CITIES FOR MAY, AT 82 CITIES FOR THE MONTH AND FOR FIVE MONTHS THIS YEAR AND LAST, AND AT 76 CITIES FOR FOUR YEARS.

CONDITION OF THE TREASURY.

The Treasury has now entered upon the last month of the fiscal year, the accounts for May rounding out eleven months of that period. According to the figures presented in the debt statement the aggregate of debt, including certificates and Treasury notes, offset by an equal amount of cash in the Treasury, amounted on May 31 to $1,776,316,583, which represents a decrease of over $2,600,000 for the month. The certificates and Treasury notes amounted to $555,646,973, a decrease of over $4,900,000 for the month. The interest-bearing debt amounted to $845,488,590, which represented an increase of $3,176,450 for the month. The debt bearing no interest amounted to $373,535,050, a decrease of $879,350 for the month, and the debt on which interest has ceased since maturity amounted to $1,645,970, a decrease of $5,820 for the month. The gold coin and bars in the Treasury amounted to $151,307,142, and the silver holdings to $512,199,837. The net cash balance amounted to $167,193,210.70, which, taken in connection with the gold reserve, gives a total cash balance amounting to $267,193,210.70, a decrease of $2,897,450 for the month.

The receipts of the government for the month of May amounted to $24,643,717. This sum represents an increase of a little over $360,000 as compared with the preceding month, but a decrease of over

$600,000 as compared with the corresponding period of the preceding fiscal year. As compared with May, 1895, there was a decrease of over $1,500,000 in receipts from customs and an increase of nearly $800,000 in receipts from internal revenue sources. The expenditures for the month amounted to $28,426,592, which represents a decrease of over $500,000 as compared with the preceding month and of over $130,000 as compared with the corresponding month of last year. The principal decreases have been on account of the war and navy departments and the principal increase under the head of pensions.

For the eleven months of the fiscal year ending with May the receipts amounted to $299,804,806, an increase of over $12,100,000 as compared with the corresponding period of the preceding fiscal year. The receipts from customs showed an increase of over $8,500,000 as compared with the corresponding period immediately preceding, internal revenue receipts showed an increase of nearly $1,400,000, and miscellaneous receipts showed an increase of over $2,100,000. The expenditures for the eleven months amounted to $326,786,680, which represents a decrease of over $7,600,000 as compared with the corresponding period of the preceding fiscal year. The most marked decrease was under the head of civil and miscellaneous receipts, where the falling off amounted to over $7,600,000. There were decreases of over $2,500,000 under the head of navy expenditures and of over $3,000,000 under the head of pensions, while there were increases of nearly $2,000,000 under the expenditures for Indians and of over $4,300,000 under the head of interest. The excess of expenditures over revenue for the eleven months ending with May amounted to over $26,900,000, while the excess of expenditures over receipts for the corresponding eleven months of the preceding fiscal year amounted to over $46,700,000, so that the deficit for the eleven months is in round numbers nearly $20,000,000 less than it was at the corresponding date last year.

WHEAT STOCKS TOTALS FOR JUNE 1.

One year ago available stocks of wheat in the United States east of the Rocky Mountains fell away 16,079,000 bushels during May, the eleventh month in the cereal year, while in May, 1896, the corresponding falling off was only 11,617,000 bushels. In April, 1896, the like shrinkage was nearly as large as in April, 1895, but in preceding months of 1896 decreases in eastern stocks of available wheat were disappointing as compared with like changes one year before. On the Pacific coast the May decrease was little more than one-third in 1896 what it was in 1895, but in April it was twice as large in 1896 as in 1895. The total shrinkage in stocks of available wheat, United States and Canada, last month was, therefore, only 12,243,000 bushels, against 17,784,000 bushels in the like month of 1895, which is a practical continuance of the records of smaller decreases in months of this calendar year compared with last.

Total supplies of American wheat on June 1, 1896, amount to 71,329,000 bushels, compared with 72,820,000 bushels one year before, 80,520,000 bushels two years previously, and as compared with 89,050,000 bushels on June 1, 1893. The quantity held on June 1 has, therefore, been slowly growing smaller for three years past, although as large to-day as one year ago, an increase of 75 per cent. as compared with stocks held June 1, 1892, and heavier increases as compared with supplies June 1, 1891, 1890, or 1889.

Details of stocks of wheat available, both coasts of the United States, together with those in Canada, on June 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
June 1, 1896	68,773,000	2,556,000	71,329,000
June 1, 1895	64,375,000	8,445,000	72,820,000
June 1, 1894	71,816,000	8,704,000	80,520,000
June 1, 1893	86,031,000	3,019,000	89,050,000
June 1, 1892	39,249,000	2,425,000	41,674,000
June 1, 1891	28,020,000	2,434,000	30,454,000
June 1, 1890	30,603,000	3,191,000	33,794,000
June 1, 1889	27,075,000	1,206,000	28,275,000

Details of the foregoing table show that stocks of available wheat in the United States and Canada on June 1 are slightly less than one year ago merely because of the unusual shrinkage of holdings on the Pacific coast, supplies east of the Rocky Mountains being about 4,400,000 larger on June 1 this year than last.

The total quantity of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on June 1, added to available stocks in Europe, as reported to BRADSTREET'S, is as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
June 1, 1896	68,773,000	2,556,000	46,640,000	117,969,000
June 1, 1895	64,375,000	8,445,000	68,656,000	141,476,000
June 1, 1894	71,816,000	8,704,000	79,872,000	160,392,000
June 1, 1893	86,031,000	3,019,000	78,088,000	167,138,000
June 1, 1892	39,249,000	2,425,000	78,496,000	120,170,000
June 1, 1891	28,020,000	2,434,000	60,240,000	90,694,000
June 1, 1890	30,603,000	3,191,000	50,816,000	84,610,000
June 1, 1889	27,075,000	1,206,000	53,519,000	81,795,000

Unexpectedly well maintained stocks of visible wheat during recent months have evidently not been without significance to the trade in importing countries, as shown by aggregates of stocks of wheat held in Europe on June 1 out of farmers' hands plus stocks afloat for Europe from all exporting countries. On June 1 in 1892, 1893 and 1894 supplies of wheat afloat for and in Europe amounted to about 78,000,000 or 79,000,000 bushels. During the same period stocks in the United States and Canada were steadily increasing, ranging from 41,000,000 bushels on the date named in 1892 to 89,000,000 bushels in 1893, and to 80,000,000 on June 1, 1894. By that time the succession of under-reported or underestimated crops of wheat in the United States had become generally recognized, and Europe began to hedge to the extent of permitting exporters of wheat, the United States among the rest, to carry more of the world's supplies, while it bought and carried less. On June 1, 1894, stocks of wheat in and afloat for Europe amounted to nearly 80,000,000 bushels, one year later to only 68,656,000 bushels, and on June 1, 1896, to only 46,640,000—a smaller aggregate than for years past at a corresponding date.

The foregoing explains why there is a sharp reduction in the volume of world's available wheat supplies as compared with June 1, 1895. It is due to the sharp shrinkage in stocks of wheat afloat for and in Europe as compared with a year ago —not of supplies in the United States and Canada, the latter being about as heavy now as on June 1, 1895. The disappointing character of the falling away in supplies since January 1, 1896, is shown in an accompanying table, with a decrease for five months of only 28,976,000 bushels east of the Rocky mountains against a shrinkage of 49,332,000 bushels in five months of 1895, and 28,320,000 bushels from January 1 to May 31, 1894. On the Pacific coast wheat bins emptied more satisfactorily, the falling off for the past five months being 4,560,000 bushels, against 4,864,000 bushels in the like portion of 1895, and 2,015,000 bushels in 1894. Combining totals for both coasts, the net loss of wheat in sight January 1 to March 31, United States and Canada, both coasts, is 33,536,000 bushels, whereas in a like portion of 1895 it was 54,196,000, and in 1894 it was 30,335,000 bushels.

In May, 1890, there was no net falling ing off in the world's wheat stocks, the early crop resulting in a net gain of about 1,800,000 bushels. In May, 1891, the net loss in supplies in the United States, Canada, Europe and afloat for Europe was about 5,100,000 bushels; in 1892, 5,700,000 bushels; in 1893, 4,900,000 bushels; in 1894, 10,300,000 bushels; in 1895, 13,510,000 bushels, and in May, 1896, 13,300,000 bushels, all but about 1,000,000 bushels of the last decrease being accounted for in this country and Canada.

The most bullish aspect of the world's wheat stocks situation is found in the total June 1, 1896, 117,969,000, as compared with 118,857,000 bushels on August 1, 1895. With an average decrease in stocks for June, 1896, the outlook is for only about 106,000,000 bushels in the world's available July 1, compared with 130,877,000 bushels one and 146,519,000 bushels two years ago.

* Decrease. † Increase.

A DECLINE IN CIRCULATION.

A net decrease of $18,422,799 is shown by the Treasury statement of circulation for the month of May. The principal decreases were $11,786,626 in United States notes, $2,840,519 in Treasury notes of 1890, $2,521,333 in silver certificates, $90,650 in gold certificates, $1,132,800 in subsidiary silver, $884,945 in standard silver dollars, and $1,316,629 in national bank notes. The principal increase was one of $1,650,783 in gold coin, the only other gain being one of $500,000 in currency certificates. The total amount of money and bullion in the Treasury on May 1 amounted to $827,932,400, of which over $152,600,000 consisted of gold and silver bullion. There was a net decrease of $167,224 for the month. The decreases were $16,950,555 in gold coin, $188,761 in gold bullion and $949,646 in silver bullion. All the other items showed increases, there being gains of $2,384,945 in standard silver dollars, $178,421 in subsidiary silver, $1,156,519 in Treasury notes of 1890, $11,786,626 in United States notes, and $2,415,227 in national bank notes.

The total amount of all kinds of money coined or issued, and the amount of each in circulation are exhibited in the following table:

	Amounts	
	Coined or issued.	*In circulation.*
Gold coin	$574,520,722	$455,876,439
Standard silver dollars	429,289,916	52,717,417
Subsidiary silver	76,994,051	61,356,627
Gold certificates	43,649,189	42,961,909
Silver certificates	340,942,504	336,313,080
Silver Treasury notes	131,385,280	98,080,506
United States notes	346,681,016	225,562,755
Currency certificates	33,670,000	33,430,000
National bank notes	225,287,935	215,285,550
Totals	$2,208,420,613	$1,521,584,283

The total amount of money in circulation, $1,521,584,283, represents a decrease of over $84,500,000 as compared with the corresponding date last year. The most marked decreases were over $27,800,000 in gold coin, over $41,300,000 in United States notes, over $19,800,000 in Treasury notes of 1890, and over $15,800,000 in currency

certificates. Among the increases was one of $14,700,000 in silver certificates. The per capita circulation on June 1 amounted to $21.35, which represents a decrease of 30c. for the month, and of $1.67 as compared with the corresponding period of last year.

National bank circulation outstanding on May 31 amounted to $225,200,348, an increase of $1,099,003 for the month and of $13,812,319 for the twelve months ending therewith. The portion of the circulation based on the deposit of bonds amounted to $205,215,839, an increase of $1,812,600 for the month, and of $20,246,261 for the year. The portion of the circulation based on the deposit of money amounted to $19,984,509, a decrease of $713,597 for the month, and of $6,433,942 for the year.

CHICAGO & NORTHWESTERN.

Unlike the roads west of the Mississippi river, which depended during the past year upon the corn crop for their freight traffic, the wheat-carrying railway lines enjoyed a comparatively prosperous year. Nothing could emphasize this fact better than the annual report of the Chicago & Northwestern Railway Company for the year ending May 31, 1896, which has just come to hand. The figures given out in connection with the annual meeting of the corporation at Chicago on last Thursday are, indeed, incomplete, or rather preliminary, so far as they relate to the fiscal year just ended. The comparisons which they suggest, with the results of the two preceding years, are, however, significant and well worthy of attention. Exhibited in tabular form, they are as follows:

	Year ending May 31		
	1896.	1895.	1894.
Gross earnings	$33,436,344	$28,108,374	$31,586,182
Operating expenses and all charges	28,328,545	25,501,326	27,678,638
Balance	$5,107,798	$2,607,048	$4,307,543
Other income	257,909	244,907	.....
Total	$5,364,707	$2,851,955	$4,307,543
7% on preferred	1,563,975	1,563,450	1,563,450
Balance	$3,801,732	$1,288,505	$2,744,093
5% on common	1,953,082	4% 1,562,096	6% 2,343,144
Surplus	$1,848,649	Def. $273,590	$401,949

Prior to the appearance of these figures it had been confidently predicted that the road would make the best showing for any year in its history. The results more than bear out this anticipation. From a comparison of the revenues for the year just ended with the corresponding period which terminated on May 31, 1895, it will be seen that the gross earnings increased no less than $5,327,970, while operating expenses were augmented only to the extent of $2,827,219, and as a result thereof the net income of the company was $2,500,750 larger than in the preceding year. In other words, the year has given the Chicago & Northwestern Company a larger surplus over fixed charges, and therefore applicable to the payment of dividends upon the preferred and common stock of the corporation, than any twelve months since 1887, when the amount thus earned was somewhat in excess of $6,000,000, though this last sum included receipts from the Transmissouri lines and land sales, which are not added to the results of operations presented in the foregoing table for the fiscal year that has just ended. Even without this addition the estimated results of the company's traffic earnings represent about 9¾ per cent. upon the common stock, as against 3⅓ per cent. in 1895, and almost exactly 7 per cent. in 1894. As the preferred stock, however, is entitled to dividends of 10 per cent. before the common shareholders can receive a dividend of more than 7 per cent., the figures given above may be somewhat misleading, though there is no doubt that the complete annual report of the company will show results no less gratifying, and even surprising, to the friends of the property.

THE ANTI-BOND BILL AND EXECUTIVE POWER.

The Senate has lately devoted considerable time which might under different conditions have been profitably spent in discussing what is known as the Prohibitory Bond bill. This bill prohibits the issue of interest-bearing bonds of the United States for any purpose whatever without further authority of Congress. The bill was introduced some months ago by a Populist senator from North Carolina, but in the meantime, as the vote on the bill showed, the idea embodied in it has gained the support not only of the Populist members of the Senate, but of a considerable number of Democrats and of many Republican senators from the silver states in the extreme west and northwest. The vote upon the bill showed thirty-two in favor of it and twenty-five opposed. Of the majority, seventeen were Democrats, ten were Republicans, and five were Populists. Of the minority, sixteen were Republicans and nine were Democrats.

Efforts were made by the opponents of the bill in the Senate to amend it in a variety of ways, but in vain. One of the amendments proposed by Mr. Aldrich, of Rhode Island, provided for the grant of power to issue bonds whenever, in case of an emergency, it is necessary, in the opinion of the President of the United States and the Secretary of the Treasury, to issue such bonds, in accordance with the provisions of existing law, to preserve the public credit or to meet obligations of the United States created by such existing law which cannot otherwise be met, and that all such bonds, when so issued, should first be offered at public sale. This amendment was promptly laid on the table, as was another proposed by the same senator declaring that nothing in the act should be construed to impair the obligation of the United States to redeem in coin outstanding United States legal tender notes and Treasury notes, nor to restrict or lessen the authority of the Secretary of the Treasury to obtain the necessary coin for the purpose of such redemption. The same fate befell an amendment proposed by Senator Hill, of New York, providing that the Secretary of the Treasury should not reissue United States notes when redeemed, and an amendment offered by Senator Quay, of Pennsylvania, providing for the redemption and cancellation of Treasury notes, and for the issue therefor of notes payable in gold and receivable for all debts, public and private.

The majority had to listen to some plain speaking before the vote was taken, and that, too, from senators politically opposed to the administration. Among these may be mentioned Senator Chandler, of New Hampshire, who expressed the hope that the Senate would not, on the eve of adjournment, repeal the only law on the statute book that enabled the President and the Secretary of the Treasury to protect the national credit and the public honor during the next six months. The President and the Secretary of the Treasury were not the men of his choice, but while senators would be at their homes the President and the Secretary of the Treasury would represent the power and credit and the money of the United States. They were to be trusted with that power, and he wished to have left with them every scrap of power that they now had under the statute to preserve the credit of the nation. Senators, he said, should rise above party and say to the people of the country and of the world that a law which enables the executive to protect the honor and credit of the United States should not be struck down by their votes.

In the course of the discussion on the Bond bill, its opponents declared that it was well known that it could not become a law at the present session of Congress, even if it should pass the Senate, the House of Representatives constituting one obstacle in the way and the President the other. The House Committee on Ways and Means has with great promptness reported the bill adversely, and there can be little doubt that its action will be sustained by the House itself. As regards the President, the senators have discussed his exercise of the veto power with great freedom during the week. One of the senators (Sherman, of Ohio,) suggested that the veto power should be curbed, and another (Pettigrew, of South Dakota,) declared that the veto power was a relic of the past; that it was out of place in a free government based on the idea that the will of the majority is supreme, and that the Constitution should be amended so as to abolish the veto power. If such ideas as these should prevail the outlook for the country would be regarded as rather discouraging by sane people. Those who have followed the recent antics of the Senate with any attention are, we imagine, disposed to congratulate themselves and the country that a presidency not dependent for its tenure or its lines of policy upon the caprice of Congress continues to be one of our strongest and, unless most signs fail, one of our most permanent institutions.

THE RIVER AND HARBOR VETO OVERRIDDEN.

Just as it was expected on every hand that the President would veto the extravagant River and Harbor bill passed by the present Congress, so it was believed that the bill would be repassed over his veto, and the expected has happened. The bill came before the House on Tuesday upon a report of the committee having it in charge recommending its passage over the veto. This report declared that most of the items had been incorporated in previous river and harbor bills, denied that there were any improvidently planned projects in the bill, and declared that the President had placed the amount under the contract system over $2,000,000 higher than was justified by the provisions of the bill, or $62,000,000 instead of only $59,600,000. Attention was further called to the fact that if the bill should fail work upon hundreds of projects in course of completion would be suspended at a great loss. Finally, the report declared that if the bill should become a law it would yield most actual substantial benefit to the farmers, the producers, the consumers, the merchants, and the business interests of the country, and contribute largely to its prosperity.

The House responded to the appeal of the committee by promptly passing the bill over the veto. The majority was a very large one, there being 220 votes in favor of the passage and only 60 votes against it. The vote was not, of course, upon party lines, a considerable number of Democrats having voted to override the veto, and a number of Republicans and several Populists having voted to sustain it. Only a two-thirds vote is required to pass a bill over a veto, so that, as will be seen, the advocates of the bill had a hundred votes to spare.

In the Senate the result was even more one-sided, there being 56 votes cast in favor of the bill and only 5 votes against it. The Senate wasted no time in proceeding to consider the bill after it came from the House. Senator Vest pointed out what he declared to be some inaccuracies in the President's statement as regards the amount to be expended, and, in regard to the President's intimation that the payment of the $62,000,000 covered by the bill was as binding as the bonded debt of the government, he deemed it a sufficient argument to "mildly suggest" that there was no interest on it. Senator Sherman, who also voted to override the veto, said that he did not think that such an appropriation bill should be vetoed under any circumstances, for the reason that if there was no money in the Treasury not otherwise appropriated he was not bound to expend it. The senator apparently overlooked the fact that the question at issue is just whether money not otherwise appropriated should be expended for the purposes and to the extent provided in the bill. The suggestion of the senator that the veto power of the President should be curbed or checked, and that of another senator that it should be abolished, will fall on deaf ears. The only practicable suggestion made in the chamber was that of Senator Hill, who, although known not to be persona grata to the administration, defended the veto. He regretted that the Constitution did not give the President power to veto items in an appropriation bill, as was the case in New York and other states, and introduced a joint resolution proposing an amendment to the Constitution giving the President this power. There is, perhaps, little likelihood that this resolution will be adopted; there is, however, as little probability that the people will ever consent to the removal of the check which the veto power at present puts upon the tendency to extravagant and dangerous legislation.

METROPOLITAN RAPID TRANSIT.

New York city, owing to its physical and geographical situation, presents the most interesting problem in connection with internal transit that can be found in any portion of the habitable globe. The narrow, rocky island of Manhattan is in some respects the last place to have been selected for the metropolis of a nation, and the march of its population during the last decade has only emphasized the fact. While the existing elevated railroads temporarily solved the transportation problem, the municipality has outgrown their facilities, and it is the most pressing question which now confronts the administrators both of the old and of the so-called Greater New York.

A great deal of attention will be paid not only by the metropolitan public, but by the entire country, to the experiments now in progress or under contemplation for the solution of the problems thus involved. The situation has been decidedly complicated by the decision of the Appellate Division of the Supreme Court of the state overthrowing the plans submitted by the rapid transit commission, and thus probably postponing the creation of an underground sytem of inter-mural communication for another generation. This leaves the whole matter in the hands of two parties, the surface lines and the Manhattan Elevated Railway. As to the former, it may be said that

New York city, both as a formal municipality and a community, has set its face firmly against the ubiquitous electric trolley which has in most of our country's cities been the practical solution of this vexing problem. To a certain extent, and within very narrow limits, the substitution of cable power in the city's principal avenues has been satisfactory simply because that kind of power compares so favorably with the old-fashioned horse-car power. A great deal of attention will therefore be paid to the experiments which it is alleged are about to be instituted by the Metropolitan Traction Company, the leading surface road organization of the city, with compressed air motors, the fact that the company in question has lately added the Fourth avenue surface road (owned by the Harlem Railroad) to its system being calculated to make the questions connected with the improvement of the old-time facilities of additional importance.

As respects the elevated systems there is also matter for a good deal of discussion. As regards the scheme of increasing the capacity of the existing structures, and giving additional speed to their trains by double-decking them, there is little or no ground for hope. It must also be noted that leading interests in the management of the Manhattan Company have insinuated that where additional facilities and new lines are required the municipality should take into consideration the question of land damages, and, possibly, assume the same. The old plans for extending the elevated roads, both on the water front of the city and in the new suburban districts north of the Harlem river, have, however, been brought into renewed prominence and, at the same time, there is a quasi promise that improvement in the operating power, by the introduction of electric motors in some form, shall not be neglected. The matter has not yet developed sufficiently to furnish safe ground for comment, but the situation is one which will certainly receive a due share of attention.

SILVER MARKET PROSPECTS.

Speculative interests have not failed to pay attention to the prospects of the silver market, and during the past week there has been a slight revival of trading in silver bullion certificates on the New York Stock Exchange. The transactions in question amounted to only 450,000 ounces, at an advance to 69½c. per ounce, against the last previous record of 68c. The movement, therefore, has thus far failed to attain any decided headway, but in lieu thereof more or less discussion has been heard of the possibility of a marked revival of interest in silver. A Wall street house noted for its original views on various topics connected with the markets voices this sentiment in the following form. After expressing the belief that silver is entitled to a considerable rise the gentlemen in question say: "We base our opinion, first, on the solid consumptive demand from abroad, but rear the superstructure of the expectation of a smart rise on the small visible supply here and the practical certainty that one of our great parties will adopt a free coinage platform. We do not believe that that principle will win, but all accounts from the west and south reveal a passionate feeling on the subject and a determination to force the free coinage issue to the front. Silver production has been falling off immensely, but the process has been so gradual that speculators have not yet taken proper note of it. There is no stock of silver bullion in the world, the markets are bare except as to the current supply, and if it began to rise, silversmiths would buy extra quantities, for they are affected just like anybody else, buying on strong markets and doing nothing on dull markets. There has been no speculation in silver for months, but there will be more of it from now on."

It will be observed that this speculative view of the situation is founded upon the political outlook with reference to the silver question in our own country rather than in the position of the metal in the world's market—London. The factors which have created a firmer tone in silver prices were commented on in the last issue of BRADSTREET'S. There is, indeed, little in relation to the subject that may be added to what was said in these columns on that occasion. The latest numbers of the London financial papers that have come to hand are a fortnight old, but, nevertheless, the remarks of one of the leading authorities on the matter—the London *Statist*—may be read with interest, as indicating that so far as foreign or oriental demands for silver are concerned, the hopes of a decided revival of speculation in the metal rest on a slender foundation. It says: "The silver market has been steady, with dealings almost entirely confined to small purchases for the continent. The buying is stated to be for Paris, but is believed to be in connection with the Spanish requirements. America has not been a free seller, holding out for 31⅛d. per ounce, whereas buyers are not willing to give more than 31 1/16d., at which they have been able to purchase some arrivals from South America. India is out of the market at the present level of exchange, and while Japan is stated to be desirous of purchasing, it is understood that she is not willing to pay more than 31d. per ounce."

Apart from this subject and the indications referred to of a renewal of interest and attention in connection with silver bullion certificates as a vehicle of speculation, there has been no change in the actual commercial position of silver. The London market, as will be seen from the regular reports and quotations in another column, retains its steadiness, and our own bullion houses report the existence of the same demand which has been holding up quotations. The contingencies to which the brokerage house whose opinions are quoted above makes reference may produce the effects it anticipates, but it is for the future to decide the matter, however interesting the subject may be.

THE ROCK ISLAND REPORT.

The fiscal year of the Chicago, Rock Island & Pacific Railway Company ends on March 31. The company's annual report, covering its operations for the twelve months ending with the above date in 1896, has just appeared, and in view of the importance of the road as one of the leading granger railway systems, is well worthy of detailed examination. It may be said that the Rock Island management is not conspicuous for the fullness of its reports or for the inclusion therein of any excessive amount of information in regard to the details of the road's operations. Nevertheless, on this occasion the document supplies some decidedly interesting reading, and, on the whole, produces a favorable impression. It naturally shows that the company was affected by the same class of influences which were apparent in the Burlington & Quincy's figures for its fiscal year. Depending, as the Rock Island largely does, upon the traffic of a corn-growing country, the low prices for that staple and the general tendency of farmers to store their corn or employ it for feeding purposes made the results to the railroads of last season's large crop exceedingly disappointing. This situation in the case of the Rock Island has been met by a severe reduction in operating expenses, and, furthermore, by cutting down the dividends paid to the stockholders to 2 per cent. for the year, against 3 per cent. in the fiscal year ending March 31, 1895, and 4 per cent. in 1894.

The tabulated comparison of earnings for the past three years is as follows:

	Year ending March 31 1896.	1895	1894.
Gross earnings	$17,359,653	$17,420,816	$21,039,073
Operating expenses	11,866,594	12,682,201	14,977,479
Net earnings	$5,493,059	$4,738,555	$6,061,594
Other income	38,439	15,644	43,038
Total income	$5,531,498	$4,754,199	$6,104,632
Fixed charges	4,107,790	4,171,068	4,049,001
Balance	$1,423,708	$583,131	$2,054,731
Dividend {	(2%) 923,116	(3%) 1,384,674	(4½%) 1,846,232
Suplus	$500,592	*$801,543	$208,499
Received in Minn. & St. L. reorganization	.....	1,154,076	.....
Surplus	.....	$352,533	.....

* Deficit.

Contrasting the results of the year just ended with 1895, the changes in the separate items are as follows:

Gross earnings	Decrease	$61,163
Operating expenses	Decrease	815,605
Net earnings	Increase	754,504
Other income	Increase	22,795
Total income	Increase	777,299
Fixed charges	Decrease	63,278
Balance	Increase	840,577
Dividends	Decrease	461,558
Surplus	Increase	1,302,135

The report shows, in the first place, that the company from operations alone during the year covered by the report earned on the stock about 3 per cent., as against about 1¼ per cent. in 1895, though in the latter year $1,154,076 received in the reorganization of the Minneapolis & St. Louis road as deferred interest upon Rock Island's holdings of the former's improvement and equipment bonds was included in the income account, and converted a deficit, after payment of dividends, into an apparent surplus. No such windfall was, however, in sight this year, and the trifling reduction of bonded debt by the operation of the sinking fund resulted in a saving of only $60,000-odd in fixed charges. Under these circumstances, a vigorous scaling down of operating cost was instituted, with the result that the item in question shows a decreased outlay of $815,000, and the total operating expenses and taxes for the year were in the proportion of 68.36 per cent. of the gross, against 72.8 per cent. in 1895.

The important feature of the report is found in the source of this reduction. In many cases leading railroads during the last two years have effected economies of equal severity, but readers of these columns cannot fail to remember that in a large number of cases this has been secured by a visible neglect of both permanent way and rolling stock, the latter too frequently bearing an unwarranted share of the burden. The Rock Island, however, is almost exceptional in having successfully restricted its economies to general expenses. It must, of course, be considered that, as compared with 1894, there was a considerable reduction in the outlay for repairs to cars and structure. It was evidently concluded that the continuance of this process was unwise, and the report now at hand shows actual increases of $209,000 in repairs to rolling stock and motive power and of about $100,000 in repairs to track and buildings. On the other hand, salaries, legal and miscellaneous expenses and such items were cut down with vigor, while the reduction of useless train service is reflected in the large decrease in the cost of fuel ($159,000) and in the wages of engineers, firemen and station agents. In this respect the report is a favorable one and indicates that the era of economy which has been inaugurated in western railroad management can be productive in other cases of further good results by extending such principles to the personnel of the road and to the miscellaneous items which in the past have been allowed to swallow an unduly large proportion of gross revenues. It may also be noted that the Rock Island, like many other roads in all parts of the country, exhibits an increased tonnage with a lowering of the average freight rate. The total receipts from that source during the year decreased $47,000, while the number of tons hauled was 167,417 in excess of the preceding year's record, the rate per ton per mile being 1.03c., against 1.05c. in 1895.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

[East of Rocky Mountains.]

A report in favor of the Nicaragua Canal has been submitted by a majority of the House Committee on Commerce. The report says that the questions of the feasibility and permanence of the canal have been definitely settled in the affirmative. Regarding the question of cost the report says that to have charged the railroad system of this country, in its incipiency, with the cost of the heavy superstructure and equipment now in use would have been injurious. The report impeaches the commission's estimates of unit prices of work on the canal by exhaustive quotations from statements of engineers. Whether the depth of canal and harbor shall be thirty feet at the outset, whether four locks shall be used instead of three, whether the water elevation should be 110 feet instead of 106, and other differences between the commission and the company are said to be details depending on whether the policy of making provision for all demands in all time to come is adopted. Owing to the testimony on unit prices the report reduces the estimates of cost on the basis of the Board's plans from $133,000,000 to $102,000,000, but holds that $100,000,000 will be an ample appropriation. The prospective benefits of the canal to the Pacific coast states and the Alleghany coal mining and iron interests are dwelt upon in the report.

Continuing, the report says that the Board of Engineers have stated that they believe the canal entirely feasible, but differ with the engineers of the company as to the probable cost of the work. The advantages of the canal are so great that the report says the canal should be built by government assistance to the company, even if it costs over $150,000,000, and the difference of opinion between the Board of Engineers and the engineers of the company does not in any way affect the feasibility or practicability of the canal nor lessen its importance to the United States. It is no longer a question whether the canal will be built, but as to who shall build it, and who shall control it when built. The feasibility of the proposed interoceanic waterway, the report says, has been fully demonstrated, and its importance and advantages to commerce have never been seriously questioned. Its consummation is inevitable, for its necessity is present and imperative, and when completed it will insure the safety and prosperity of the interests and industries of the American people.

A Washington dispatch gives the views of Internal Revenue Commissioner Miller on the repeal of section 61 of the Tariff bill, providing for free alcohol used in the arts and for medicinal purposes. The repeal, he says, will have the effect of increasing the net revenue from internal revenue sources $10,000,000 per annum. There are now pending suits against the United States for $15,000,000 for alcohol used since the passage of the Wilson Tariff bill, and which the Treasury refused to refund, as provided by that section. The government has taken the position that it is impossible to draft regulations to carry that section into effect and at the same time to protect the interests of the Treasury. In the meantime manufacturers of medicinal compounds and those who use alcohol in the arts have been using duty-paid alcohol, and keeping their own accounts, and demanding a refund of the amount paid, which the Treasury has uniformly refused to refund, alleging as a reason that the Treasury had provided no regulations to determine the quantity used, and could not take unofficial or ex parte statements of interested parties of the quantity of alcohol so used.

The executive committee of the New York Credit-men's Association have called a general meeting for Tuesday, June 9, at 4 P.M., at the Broadway Central Hotel, New York. Mr. W. H. Preston, of Sioux City, Iowa, the chairman of the national executive committee for the Toledo convention, has accepted an invitation to address the meeting. Members of the committee from other eastern cities are also expected. The Toledo meeting, June 23, 24 and 25, will be the first annual convention of the Credit-men's Association of the United States, and it is expected it will be attended by 900 delegates. Among those invited to deliver addresses are Hon. James H. Eckels, Comptroller of the Currency; James G. Cannon, vice-president of the Fourth National Bank, New York; F. R. Boocock and M. E. Bannin, of New York, and Lyman Gage, of Chicago.

Estimates from regular county correspondents of *American Agriculturist*, carefully consolidated, show an increase of 2.6 per cent. in the acreage of winter wheat now growing in comparison with the area harvested last year. In spring wheat there is a decrease of slightly less than 1 per cent. The actual area is estimated at 25,043,000 acres of winter and 12,056,000 acres of spring, a total of 37,099,000, against 36,565,000 harvested last year. The acreage of the present year is smaller by some 333,000 acres than the average breadth of the past three years. Winter wheat shows a decline in condition of 5.3 points since May 1, standing at 83.1. The first report of spring wheat shows condition 95.5, a figure rarely exceeded in the history of the crop. In spite of low prices, the steady enlargement of oats acreage, which has been a marked feature of American agriculture in recent years, continues. The area this year, according to special investigation, exceeds that of last by about 300,000 acres, or 1.4 per cent., making it the largest ever planted. The season has been remarkably favorable for the crop, and condition, reported at 94.1, is 10 points higher than last year, and higher than has been reported in any year since 1888. Apparently another large acreage of corn has been planted. The season to date has been remarkably favorable. The condition of the crop is reported very uniform, and almost perfect, the general average being 95.9.

That the movement to further the building up of a larger American export trade is not to be allowed to languish for want of energetic work on the part of the representatives of the manufacturing and commercial interests is proved by a meeting of delegates of leading trade and commercial organizations at the Philadelphia Museum on Wednesday and Thursday of this week. The representatives of these organizations, about sixty in all, have been constituted an advisory board of the Museum, thus bringing every important trade and line of commercial effort in this country into direct relations with the Museum, which is by far the most important, and, in fact, only undertaking of its kind in this country. The first day of the meeting of this advisory board was devoted to the formal opening of the board's proceedings, and included an address by Dr. William Pepper, president of the board of trustees of the Museum, who gave an instructive explanation of the objects sought to be attained. Following this was an inspection of the exhibits and practical workings of the Museum by the advisory board, after which the following officers of the board were elected: President, Henry W. Peabody, of Boston; vice-presidents, W. H. Parsons, of New York, Charles L. Raymond, of Chicago, and Robert Blakely, of New Orleans; secretary, William Harper, of Philadelphia.

At a banquet in the evening a number of addresses were made by officers and members of the advisory board. In speaking of the relation of the Commercial Museum to the manufacturing interests of the country, Mr. Theodore Search, president of the National Association of Manufacturers, said: "England, Germany and France rank first in the supply of manufactured products for the world's markets. Great Britain furnished nearly 30 per cent. of the total of manufactures, Germany nearly 18 per cent., and France 13 per cent., making about 60 per cent. for these three countries. In 1892, the year upon which these calculations were based, our share of the world's total exports of manufactures was only 7.5 per cent., although in 1894 it increased to 12.16. A comparison of the exports and population shows Switzerland in the lead, with $37 worth of exports of manufactures per capita. Then come the Netherlands, $35.60 per capita; England, $24.60; Belgium, $23.40; Germany, $11.50; France, $11; Sweden, $7; Norway, $4.60, and the United States, $3.40." That this disproportion in our share of the world's trade in manufactures should and could be remedied was affirmed by Mr. Search, who said: "American ingenuity and energy, supplemented by machinery which turns our highly-paid labor into the most economical productive factor, and by the cultivation of our artistic faculties, will open wide the markets of the world for the products of our industry. I have an abiding faith in the ability of our people to meet all the problems as they arise, and I have no fear for the ultimate success of our efforts to gain that share of the world's trade to which our industrial importance entitles us."

A Paris correspondent writes that the story that the French government pays a bounty on the export of flour is incorrect. Nothing, he says, is paid by the French government on flour exported, but a defect in the French law regulating the duty on the import of wheat, and its application in connection with the "acquit-à-caution" system of temporary entry, has given rise to this supposition. As a matter of fact, the working of the acquit system, he says, virtually constitutes a premium to the miller on wheat imported. The bill classifies mill products in two classes—60 per cent. of flour and 38 per cent. bran and middlings, with 2 per cent. allowed for short weight; and 70 per cent. of flour and 28 per cent. bran and middlings, and so on, for 80 and 90 per cent. extraction. Therefore, in exporting 60 per cent. flour in compensation for wheat imported, under the temporary entry system, and to discharge or release the acquit-à-caution, there will remain in the hands of the miller 38 per cent. of by-products, comprising 15 per cent. of seconds flour, 6 per cent. of middlings and 17 per cent. of bran, on the whole of which 60 francs per 100 kilos duty is paid, instead of the real duty on seconds flour, which is not less than 11 francs per 100 kilos, equivalent to the parity of the duty on wheat.

There is besides this the margin of 10 per cent. from one type of flour to the other, equal to 16.66 per cent., 14.30 per cent. and 12.50 per cent. in wheat, which remains at the discretion of the miller, as the Customs do not admit of fractions, so that 69 per cent. flour must be declared as extracted at 60 per cent. This is an adaptation of the regulations. The classification of flour exported is determined by comparing the color with the color of standard types, which is quite insufficient. From this it is seen the French miller derives no profit on flour exported, and may even suffer loss; his profit is realized on the by-products which are not exported and on the margin between the different ratios of extraction which the Customs takes no account of. In the first case, the benefit will be the 15 per cent. of seconds flour, on which, if imported, the duty would have been 11 francs per 100 kilos, equal to 1.65 francs per 100 kilos on the total quantity of wheat imported, less .09 francs representing the duty paid for bran. In the second case, flour extracted at 69½ per cent. is accepted at the Customs as extracted at 60 per cent., leaving 9½ per cent. of first flour, on which, if imported, the duty would have been 13.50 francs per 100 kilos, equivalent to 1.28 francs per 190 kilos on the total quantity of wheat imported, less .06 francs representing the duty paid for bran, and in this case he also has a certain proportion of seconds, which will constitute a total profit equal, if not exceeding, that shown in the first case.

CURRENT BUSINESS NEWS.

Industrial.

The *American Manufacturer* says: "It is now announced that the convention of the Amalgamated Association of Iron and Steel Workers, which has been in session at Detroit for the past week, has decided to make a move for an advance in at least one department. The puddling rate, it is stated, has been put up in the new scale, making the minimum figures $4.50 per ton instead of $4 per ton, which has been the rate during the past year. Other changes have been made, so reports say, but none include a decided advance such as is proposed in the puddling rate."

It is estimated the market requirements of newly mined anthracite coal for June will be 3,000,000 tons (compared with 3,777,644 tons, the actual output for the same month of 1895), and it is expected that each of the companies will restrict its production to their respective percentages of that quantity. "There is reported a good demand for stove and no surplus stock of that size, and some shippers do not desire any more orders for chestnut coal at present."

Five per cent. below the $2.50 basis is the wages which will be paid the mine workers in the Schuylkill anthracite region for the last half of May and the first half of June. This figure is 5 per cent. below the present wages.

Two hundred Paterson, N. J., silk operatives struck against a reduction of 15 to 20 per cent. in wages this week.

The seventh biennial session of the Pattern Makers' National League of North America opened this week at Philadelphia. The league is affiliated with the American Federation of Labor and has a total membership of about 3,500, its local unions being established in all the principal cities from Boston to San Francisco.

The 500 or 600 grain scoopers who are members of the Grain Shovelers' Union, International Longshoremen's Association, of Buffalo, have gone out on strike. The men demand an increase of $1.50 per thousand bushels and no Sunday work, and that they shall have a voice in the selection of the boss scoopers.

At Chattanooga general business, as reported by the *Tradesman's* correspondents, continues quiet, but manufacturers are enlarging their plants and getting ready for an active trade in the fall. "Weakness characterizes the iron and steel markets and prices are lower. Since April 1 pig iron has fallen more than 5 per cent., but there has been a slight advance on finished products. The furnaces at South Pittsburg, Tenn., will blow out to-day to remain idle until prices advance. The Big Stone Gap, Va., furnace has blown out and will be relined."

The Brotherhood of Locomotive Engineers, in session at Ottawa, Ontario, has decided in the case of twenty engineers who were dismissed by the authorities of the Plant Railway system, in Georgia, to pay the wages of the men until they get employment.

What is claimed to be "the biggest oil well in the Indiana field" has just been struck in the woods near Van Buren. When the drill was pulled a stream of oil six inches in diameter spurted like a fountain for fifty feet above the derrick.

The third annual convention of the Millers' National Association has been held at Chicago this week. Charles A. Pillsbury, of Minneapolis, presided. The following officers were elected: President, Charles A. Pillsbury, Minneapolis; first vice-president, M. H. Davis, Shelby, Ohio; second vice-president, George Urban, Buffalo; third vice-president, F. H. Madgeburg, Milwaukee; treasurer, Charles J. Martin, Great Falls, Mont.; secretary, Frank Barry, Milwaukee. Executive committee—C. B. Cole, Chester, Ill.; Charles T. Ballard, Louisville; C. E. Angel, Rochester; W. A. Coombs, Coldwater, Minn.; Frank Barry, Chicago. The next meeting will be held in Chicago a year hence.

There is a lockout at the works of the Illinois Steel Works, Chicago, and nearly 1,500 men are thrown out of employment.

Commercial.

Messrs. Clapp & Co., of New York, write that the "trade and statisticians seem to have forgotten that Denmark, Germany and France are raising more hogs, and Argentine more corn, while the south never had so large a home supply of hogs and hominy. Exports of lard and meats are much larger than a year ago, and have recently increased. The lard bulls of England and Berlin have failed to advance prices, and sold out. Perhaps this is a signal that values will not decline further. Loose lard sold at $6 80, the lowest price on record. Hogs at about $2 per hundred pounds in the corn belt indicates values are at the minimum point since 1860. The domestic demand at Chicago is reported as moderate."

The Philadelphia *Press* says: "The great depression in the price of wheat and provisions is again attracting attention by reason of the further declines this week. The price of wheat and corn are now at about the lowest ever known, and provisions are in a similar condition. This situation has a powerful influence on Wall street, and checks anything like wide trading in stocks."

The *Orange Judd Farmer* estimates the wheat crop at 500,000,000 bushels. It places the winter at 320,000,000 and spring at 180,000,000 bushels. The crop of 1895 was estimated at 467,000,000, against 460,000,000 in 1894 and 396,000,000 in 1893, and it was too small.

The Thomas *Produce Report*, San Francisco, says: "So as we have always maintained while there may be some little side issues affecting the wool market in a light degree—the main cause of the lower market for not only wool, but everything in produce, has been that many of those who had always been able to buy your clothes, bread, etc., have been deprived of the wherewithal to get it by improved machinery. And a trade journal that does not note the workings of industrial life in these days, and apply them to the condition of trade and finance is working on a very thin crust."

Financial.

The following securities were sold at auction this week at New York:

50	Shares Dayton & Michigan Railroad Company, $50 each	77¼%
395	Shares Spokane Falls Water Power Company, $100 each (hypothecated); 500 shares Northwestern Milling & Power Company, $100 each (hypothecated)	$100 for lot
$500,000	The New York & Western Coal Company 1st mortgage 6 per cent. gold bond (hypothecated)	$150,000
$24,000	Colonial City Electric Railway Company	1
$3,000	City of Yonkers, county of Westchester, 7 per cent.	111¾
1	Share Chemical National Bank	4,105
$10,000	Norfolk & Virginia Beach 1st	38
1,650	Shares Leadville Consolidated Mining Company	10c. per share
5	Shares American Horse Exchange	$25
50	Shares Metropolitan Concert Company	$2
5	Shares Equitable Gas Co., Suffolk county, N. Y.	$1
3	Shares South Side Improvement Company	$1
100	Shares Denver, Western & Pacific	$1
300	Shares Sage Run & Oil Creek Petroleum Co.	$1
300	Shares Cashier Mining Company	$1
1,450	Shares Grand View Mining Co.	$1
1,450	Shares Rico Mining Co.	$1
280	Shares Magnetite Mining Co	$1
528	Shares Kennebec Mining Company	$1
10	Shares U. S. Mining Investment Company	$1
8,523	Shares Dolores Montezuma Silver Mining Co	$2
11-100	Shares Interest in Firefly Claim in Colorado	$1
$106,000	State of North Carolina 6 per cent. bonds	$450
$1,000	Gainesville, Jefferson & Southern 2d 7 per cent.	30
$2,000	Atlantic Mutual Ins. Company scrip of 1896.	104¾
5	Shares United States Trust Company	1,070
$6,057.03	National Cordage Company trust liquidation certificate	$270
$6,985.40	National Cordage Company trust liquidation certificate	$295
$8,000	Camden & Atlantic Railway Co. 2d 6 per cent.	106⅛
10	Shares East Orange National Bank	110
$23,000	Retsof Mining Company 1st 5 per cent.	16
10	Shares Title Guarantee & Trust Company	310
15	Shares Southern National Bank	111½

The following meetings of companies are announced:

C., St. P., Min. & Omaha—Annual	June 6
Westinghouse Electric—Special	June 4

The Columbus, Hocking Valley & Toledo Railway Company has declared a dividend of 2½ per cent. on its preferred stock, payable July 1.

The United States Leather company has declared a dividend of 1 per cent. on its preferred stock, payable July 1.

The Maritime Association in New York city has adopted resolutions advocating the existing gold standard.

The free silver editors of Minnesota at Minneapolis have organized the "Reform Press Association of Minnesota."

The Consolidated Produce and Stock Exchange of Chicago was opened June 1. "The new Exchange starts out with 283 regular members, of whom 135 are non-residents. When the Exchange opened there were many men in the pit, and the trading in wheat was remarkably lively. The new Exchange is planned after the style of the Consolidated Stock and Petroleum Exchange in New York, and is established to fill a place long desired by speculators and traders who have been unable to get accommodations on the larger exchanges."

The New York Clearing House was to hold a meeting Thursday to consider a resolution providing that hereafter members of the association shall not send through the exchanges any checks, sight drafts, notes, bills of exchange or other items having thereon any qualified or restrictive endorsement, such as "for collection" or "for account of," unless all endorsements thereon are guaranteed by the bank member of the association sending such checks, drafts, notes, bills of exchange or other items.

The New York *Daily Stockholder* presents the following table of dividend disbursements for the past four years:

	1896.	1895.	1894.	1893.
Bonds	$540,342,631	$541,224,153	$519,696,155	$634,889,910
Interest	14,892,602	14,780,015	14,346,875	17,304,057
Stocks	481,205,386	382,636,335	378,473,335	368,606,835
Dividends	10,695,347	9,597,222	9,681,317	9,201,955
Total disb.	25,587,953	24,377,237	24,028,192	26,506,012

Railroads.

The following railroads report gross and net earnings for April this year and last:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Allegheny Valley	193,124	206,955	69,381	89,976

Wheeling & Lake Erie	117,849	72,370	64,857

At the sale of the Cedar Falls & Minnesota Railroad, on Tuesday, the property was bid in by John S. Hannah, of Chicago, for $600,000. Mr. Hannah acted for the stockholders of the Illinois Central Railroad, who held 90 per cent. of the $1,377,000 of the bonds of the road.

The Travelers' Protective Association, in session at Terre Haute, Ind., this week, "unanimously decided to make war on the railroad companies. The national convention, in secret session, adopted a resolution looking to secure legislation in the several states fixing the fare for all passengers at 2c. a mile."

The House Judiciary Committee has agreed to a favorable report on the joint resolution permitting the reorganization of the Northern Pacific Railway Company.

The Chicago and Northwestern Railroad Company has declared a semi-annual dividend of 2½ per cent. on its common stock and a quarterly dividend of 1¾ per cent. on its preferred stock, payable July 6.

The Denver and Rio Grande Railroad Company has declared a dividend of 1 per cent. on its preferred stock.

The New London Northern Railroad's report to the Massachusetts Railroad Commissioners for the quarter ending March 31 compares:

	1896.	1895.	1894.	1893.
Gross	$143,666	$141,353	$137,487	$157,179
Operating expenses	100,869	104,318	96,723	120,542
Net	$42,797	$37,035	$40,763	$36,637

The all-rail east-bound shipments of dead freight from Chicago last week were 40,311 tons, against 49,305 tons the previous week and 38,909 tons the corresponding week of the previous year.

The Chicago & Eastern Illinois report for ten months ending April 30 shows:

	1896.	1895.	
Gross	$4,474,329	$3,124,732	Inc. $349,597
Operating expenses	1,931,250	1,973,091	Dec. 41,841
Net	$1,543,079	$1,151,641	Inc. $391,438
Prop. expenses to gross	55⅝	63⅛	Dec. 7½
Total income	1,667,045	1,289,085	Inc. 377,960
Charges	1,156,982	1,140,786	Inc. 16,196
Surplus	$510,063	$148,299	Inc. $361,764

The preliminary annual report of the Chicago & Northwestern for the year ending May 31, partly estimated for 1896, actual for 1895 and 1894, shows:

	1896.	1895.	1894.
Gross	$33,436,344	$28,108,374	$31,986,182
Op. expenses and charges	28,328,545	25,501,326	27,678,638
Net	$5,107,798	$2,607,048	$4,307,543
Other income	257,909	244,907	----
Total	$5,364,707	$2,851,955	$4,307,543
Dividend on preferred	1,563,975	1,563,450	1,563,450
Balance	$3,801,732	$1,288,505	$2,744,093
Dividend on common	1,953,082	1,562,096	2,143,144
Surplus	$1,848,649	Def. 273,590	Sur. $400,949

The Chicago and Eastern Illinois Railroad Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable July 1.

Miscellaneous.

The Hon. Hannis Taylor, United States Minister to Spain, furnishes an elaborate review of "England's Colonial Empire" in the June number of the *North American Review*. "The varied forms of government exercised by Great Britain toward her dependencies and the distinguishing features of each are treated by Mr. Taylor in a most attractive style."

The Anti-Coal Trust bill, which was recently passed by the New York state legislature, was permitted to die by Governor Morton, who did not sign it within the required time after adjournment of that body.

Messrs. Clapp & Co., bankers and commission merchants, New York, have issued their third annual souvenir book, covering the business of leading American exchanges in 1895. The book is a reproduction of the firm's weekly letters of 1895, and is beautifully gotten up.

Foreign.

The Pacific cable conference, at which representatives of Canada, New Zealand and Australia were present, assembled at London this week. The advocates of the undertaking urge that the British government should unite with the governments of Australia and Canada in guaranteeing the interest upon the capital required for a single line of cable from Vancouver to Australia.

A resident of Hoboken, N. J., has received a letter from Pres. Kruger through the German General Consulate at New York. The South African diplomatist declares "that emigration to the Transvaal republic, either from America, Germany or elsewhere, would not be advisable at the present time, as, on account of the well-known political troubles, commerce and industries are at a rather low ebb, and offer insufficient opportunities to make a living for newcomers."

Germany has taken kindly to the idea of boards of arbitration, to which commercial and trade disputes may be referred, and efforts are now being made to establish tribunals for settling troubles between merchants. In a report on the subject, Mr. J. C. Monaghan, United States consul at Chemnitz, says that six Brunswick chambers of commerce have established a board, to which all trade and commercial troubles may be brought. The great expense and delay attending appeals to courts of law have made the mercantile world favorable to the project, and it has received almost general commendation from all classes.

Spanish imports, beginning with the fiscal year and up to the month of April, have increased 1,143,046 pesetas ($210,000), and the exports have increased 98,536,258 pesetas ($18,710,000) compared with the same period of 1895. The customs receipts for the first ten months decreased 16,139,471 pesetas ($3,060,000).

The London *Financial News* says: "One hardly recognizes Roumania as a maritime country, and yet, with Varna and the Danubian ports, its waterborne commerce is of some importance. An endeavor is now being made by the government to extend the mercantile marine of the country. The Minister of Public Works asks for an extraordinary credit of 10,000,000 francs to buy several steamers to carry passengers, mails and cargo between Roumanian ports and Constantinople, the islands of the Archipelago, Egyptian and Mediterranean ports, England, Belgium and Holland."

Last year the production of coal in India exceeded 3,000,000 tons, the precise figure being 3,065,500 tons, or an increase of 244,848 tons on 1894, and of 1,771,270 tons on the output of 1885. The progress of coal mining in India has been remarkably constant since the industry first assumed respectable proportions, and the fuel is, as a rule, of such satisfactory quality that the demand is always in excess of the capacity of the mines; but some of the Indian coal is quite unfitted for steam raising, while some is so fiery that it gets up a heat which almost burns up the fire bars.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Debt—Security—Note—Maturity.

The maturity and renewal of a debt collaterally secured does not operate to bring to maturity a note for longer time primarily secured by mortgage, and held as such collateral security, according to the decision of the Supreme Court of Indiana in the case of the Clause Printing Press Company et al. vs. Chicago Trust and Savings Bank.

Married Woman—Mortgage—Estoppel.

The Supreme Court of Indiana held, in the recent case of Trimble et al. vs. State ex. rel. Stephens, that where a married woman, to obtain a loan from the school fund, complies with all the statutory requirements, makes the prescribed affidavit, and executes a mortgage upon her real estate to secure the loan so obtained, she is estopped to dispute the validity of such mortgage, although the auditor making the loan knew it was for her husband's use.

Insurance Policy—Stipulation—Action.

The Supreme Court of Georgia held, in the recent case of Brooks et al. vs. Georgia Home Insurance Company, that where a policy of insurance stipulated, among other things, "that no suit or action against this company for the recovery of any claim by virtue of this policy shall be sustainable in any court * * * unless commenced within twelve months next after the loss shall have occurred," an action upon such policy brought more than twelve months after the destruction by fire of the property insured was barred.

Growing Crop—Mortgage—Lien.

The Supreme Court of Georgia held, in the recent case of Stewart vs. Kramer et al., that where a growing crop was mortgaged to secure advances with which to make the same, and after its maturity was sold under a common law execution against the mortgagor, this execution was entitled to the proceeds of the sale as against an execution issued upon a foreclosure of the mortgage, it appearing that the common law execution had been entered upon the general execution docket before the mortgage was given, and the mortgagee not being a person entitled to a statutory lien upon the crop for such advances.

Contract—Partnership—Distilleries.

The Kentucky Court of Appeals held, in the recent case of Mattingly vs. Stone, that a written contract between appellant and appellee by which appellee acquired an interest in two distilleries owned and operated by appellant, in consideration of the transfer to appellant of a valuable brand owned by appellee, created a partnership between them which could not be terminated by appellant at his will and pleasure, and that as the parties by the terms of the written contract were each to perform services and to render the assistance necessary to the proper conduct of the business, and appellee failed to render any assistance in the management of the business, leaving it entirely to appellant, who also furnished the capital, in an action for a settlement of the partnership the appellant was entitled to compensation for his services.

Insurance—Application—Burden of Proof.

The Supreme Court of Minnesota held, in the recent case of Chambers vs. Northwestern Mutual Insurance Company, that in a suit upon an insurance policy it was no part of the plaintiff's case to allege and prove that the answers contained in the application were true, but that the burden was on the insurer to allege and prove their falsity, and he must in his pleading specify which of the answers he claimed to be false, and on the trial would be limited in his proof to those which he alleged to be false. The court also held that evidence as to the business habits, pursuits and associations of the insured at and before the time of the issuing of the policy was admissible as bearing on the question whether he was temperate; also that the questions above quoted had reference to the habits of the insured and not to exceptional and occupational acts, and the word "temperate" meant abstinence from excessive or injurious use, and not total abstinence.

Grain Note—Lien—Conversion.

In the case of Schofield vs. National Elevator Company, recently decided by the Supreme Court of Minnesota, it appeared that the appellant owned a seed grain note which was a lien upon certain grain raised from the seed furnished by him and described in the seed grain note. After default in the payment of the note, appellant brought suit against the respondent, alleging in his complaint that he was the owner of the grain so raised, and that the respondent had wrongfully converted the same. The trial court, against the objection of the respondent, permitted the appellant to introduce in evidence the seed grain note and default in its payment, as sole proof of the respondent's ownership therein. The court held that a seed grain note is not a conditional sale of property therein described; that default in the payment of such a note does not of itself divest the title of the maker of the note to the grain mentioned in the note, and that the admitted proof of ownership of the grain constituted a variance between it and the allegations of ownership set forth in the complaint, and was therefore inadmissible under the allegation in the complaint.

Insurance—Stipulation—Arbitration.

In the case of Ritch vs. Masons' Fraternal Accident Association, recently decided by the Supreme Court of Georgia, it appeared that a policy of accident insurance contained a stipulation in these words: "No legal proceeding for recovery hereunder shall be brought until the expiration of three months after receipt by the association of acceptable proofs of loss, and the association shall not be required, in case of a disagreement between the certificate-holder and the beneficiary and the association as to liability, to arbitrate the question of liability, as by the rules of this association it is provided, and no suit shall be brought at all, and the said association shall not be bound to arbitrate at all, unless the said suit is brought or such arbitration is in writing demanded, within one year from the date of the alleged accident, and no suit shall be brought in any case except to enforce payment of the award of the said arbitrators, unless the association refuse to arbitrate." The court held that whether the requirement that "no suit shall be brought in any case except to enforce payment of the award of the said arbitrators, unless the association refuse to arbitrate," was or was not reasonable, an action brought by the insured after more than one year from the date of the alleged accident, he having made no demand for an arbitration, was too late, and that if in any event "overtures for a settlement" or "promises to pay" on the part of the company, or "negotiations" between it and the insured for a settlement, could have the effect of extending the time within which the plaintiff might begin his action beyond the conventional limit prescribed by the policy, there was nothing in the facts of the case to constitute an exception of this kind, and that it did not appear that there was any conduct on the part of the company which should have deterred the plaintiff from bringing his action within the year.

Railroads—Tickets—Connecting Lines.

The Supreme Court of Illinois held, in the recent case of Chicago & Alton Railroad Company vs. Mulford, reported in the Chicago *Legal News*, that a railroad company in selling a passenger ticket, with coupons over its own and connecting lines, in the absence of a contract to the contrary, acts merely as the agent of the other lines, and there is no extra terminal liability, the rights of the passenger and the duties and responsibilities of the several companies, over whose road he is entitled to passage, being the same as if he had purchased a ticket at the office of each company constituting the through line. The court said: "In the English courts it is held that the sale of a ticket by a railroad company over its own and connecting lines is evidence of a contract for through carriage to the destination, and that the company making the sale thereby enters into a contract that renders itself liable for the full journey. In this country the decisions are not harmonious, but the general rule is stated in the "American and English Encyclopedia of Law," vol. xxv, page 1085, as follows: 'But the doctrine founded in reason and best supported by the authorities in this country is that, in the absence of a contract making it responsible, the carrier selling the tickets acts merely as the agent of the other lines, and there is no extra terminal liability, the rights of the passenger, and the duties and responsibilities of the several companies, over whose roads he is entitled to passage, being the same as if he had purchased a ticket at the office of each company constituting the through line.' The rule is also stated in Redfield on the "Law of Railways," vol. ii, sec. 185, as follows: 'These through tickets in the form of coupons, which are purchased of the first company, and which entitle the persons holding them to pass over successive roads, with ordinary passenger baggage, sometimes for thousands of miles, in this country import commonly no contract with the first company to carry such person beyond the line of their own road. They are to be regarded as distinct tickets for each road, sold by the first company, as agent for the others, so far as the passenger is concerned,' etc. This rule has been adopted by this court."

BUSINESS NOTES.

Bolivia Arming.

An English newspaper says: "Bolivia is one of the poorest of the South American republics, but it is not lacking in spirit. The new budget provides for an expenditure of $400,000 on armaments, an outlay which has been forced on the government by the restlessness of some of Bolivia's neighbors. The sum appropriated will not go very far in the acquisition of modern arms, but it will do a good deal towards complicating the finances of the country, which, fortunately, is not among our debtors. In view of the situation in South America, it is hardly surprising that Bolivia should try to show that it is still alive."

Wheat Surplus in France.

The London *Statist* says: "A correspondent takes up a remark we made recently with regard to France having a surplus of wheat beyond her home requirements. In reply to the question, What will France do if she has a surplus of 5,000,000 quarters this crop season? our correspondent observes that she will find a ready customer in Spain, where more than such a surplus as that above referred to will, apparently, be required. Our correspondent is of opinion that if weather conditions in Spain do not mend capitalists and companies with works, mines, etc., in Spain will be wise to promptly take steps to import food for their workpeople. 'Grain dealers nowadays work on a different plan from Joseph.'"

European Forest Area.

The St. Louis *Globe-Democrat* says: "The forest area of Europe is much larger than most persons in this country are aware of. In Russia there are 503,000,000 acres of forest, or 40 per cent. of the whole; in Sweden and Norway, 62,000,000, or 34 per cent.; in Austria, 45,000,000, or 29 per cent.; in Germany, 34,000,000, or 26 per cent.; in Turkey, 25,000,000, or 22 per cent.; in Italy, 14,000,000, or 22 per cent.; in Switzerland, 1,700,000, or 18 per cent.; in France, 22,000,000, or 17 per cent.; in Spain, 8,000,000, or 7 per cent.; in Great Britain, 3,000,000, or 4 per cent. Even little Denmark has 3 per cent. of the total area in forest, while Greece has nearly 2,000,000 acres, or 14 per cent., and Holland and Belgium have each 7 per cent. of wooded land."

The Financial Test.

The *American Economist* is credited with the following comparisons:

"BUSINESS OF THE COUNTRY."

	Amount.
January to April, 1892	$20,933,879,840
January to April, 1896	17,059,514,662
Decrease, 1896	$3,874,365,178

"BUSINESS OF THE NATIONAL BANKS."

	Loans and discounts.
September 30, 1892	$2,153,498,829
February 28, 1896	1,951,344,782
Loss in 1896	$202,154,047
	Deposits.
September 30, 1892	$2,022,500,000
February 28, 1896	1,648,092,869
Loss in 1896	$374,407,131

	Net earnings.	*Ratio to capital and surplus.*
March 1, 1892	$34,363,090	3.78 per cent.
September 1, 1895	23,498,671	2.87 per cent.
Decrease, 1896	$10,864,419	1.21 per cent.

St. Louis After the Storm.

The *Globe-Democrat* says: "The first reports of the great St. Louis storm were considerably exaggerated, as is usually the case when such a calamity occurs. It was impossible in the confusion and darkness to obtain definite information, and the stories of havoc and fatality were magnified by the exciting influences of the situation. The number of killed, which was hastily estimated at 1,000, is now known to be less than 200 for St. Louis and probably about the same for East St. Louis, while the destruction of property may be put at not to exceed $5,000,000. It is impossible as yet to tell how many were wounded, but the list is likely to be several times as large as that of the dead; and there are hundreds of houseless and destitute families, thankful in their distress that they escaped with their lives. The work of succoring the needy is being carried on with all possible diligence and effectiveness."

Trade in Costa Rica.

The London *Daily Financial News* says: "Costa Rican trade showed some expansion last year, the value of the imports into the republic rising £182,215, while the exports were about £125,000 greater. In the imports British goods did not figure so well as in 1894, but this was due wholly to the reduction of the arrivals of coal by one-half. Consul Harrison makes no suggestion as to the falling off in the imports of fuel from Great Britain. American imports rose slightly, as they have been doing consistently for some years back, but this is mainly because more flour is imported into Costa Rica than in former days. Among the exports coffee showed the greatest increase, the shipments of bananas being slightly smaller than in 1894. This article of produce hardly deserves to bulk so largely in the public mind as one of the mainstays of Costa Rica, as the total value, on board, of bananas has been little over £64,000 in recent years."

Australia's Money Market.

The London *Statist* says: "Money has become so abundant in Australia, and so cheap, that the banks find it exceedingly difficult to employ their funds. The really strong banks, it is said, are exerting themselves to get business, and as the funds at their disposal are immense, while their credit stands high, the best business naturally goes to them. But for all that it is exceedingly difficult to employ surplus funds. The hope is that some of the reconstructed banks may begin to realize their assets. If they would only offer estates for sale there is plenty of money, both in the colonies and at home, to be invested at a fair price, and if the estates were to pass into the hands of men who could work them properly—men, that is to say, with reasonable knowledge and with good credit—there would be before long a revival of prosperity. The real mischief is that so much land has passed into the hands of the banks who do not work on proper principles, and who are afraid to sell it."

Stanley on Commercial Methods.

Mr. H. M. Stanley, M.P., in the course of a recent address before the Swansea Chamber of Commerce, "said that the astonishing increase in foreign trade as compared with that of the United Kingdom was due to the spirit of cosmopolitanism in commerce which is prevalent on the continent generally, and especially in Germany. The German devoted himself to learning foreign languages, methods and weights and measures, and endeavored, in intercourse with foreigners, to make himself as little German as possible. The Welsh, on the other hand, were inclined to attach undue importance to a narrow patriotism. The English were guilty of favoring branches of education which were of no use for commercial purposes. Another cause of loss of trade was British 'laziness' and lack of adaptability. The British expected customers to come to them, while foreigners, by means of commercial travelers, went to the whole world and got business in this way which otherwise would not have been obtained at all."

The Glow Lamp Problem.

The Philadelphia *Press* says: "First Tesla, then Edison. First Edison, then Tesla. Now it is Edison who seems to have solved the glow lamp problem, and, as is the wont of the wizard, in a novel way, too. As in previous cases, the toy of the lecture room in his hands assumes a practical effect. It is known that in a vacuum tube the kathode rays cause mineral substances to glow with beautiful color effects. Mr. Edison has applied this principle in an exceedingly common-sense manner to lighting. He has found a suitable mineral which fluoresces with a white light. He coats his vacuum tube with the crystals of this mineral, turns on the current, and the effect is a brilliant glow. Not only this, but all the X rays, or kathodic rays, are kept within the tube, and so it does not lose any of its energy. As the mineral is common and cheap the commercial end of the new light seems assured. Allowing for all claims, it is apparent that we are on the edge of a great change in electric lighting, and if the credit rests on Americans, so much the better."

Canada's New Map.

The *American Agriculturist* says: "The 1,411,000 square miles of Canadian territory previously unnamed has been divided and named and appears on the new official map duly labeled. The new districts are as follows: Ungava, which includes all the district between Hudson's bay and the Arctic ocean, with the exception of the narrow coast line of Labrador. Franklin, the great group of islands north of Hudson's straits and lying between the 60th and 125th degree of west longitude. West of this again is Mackenzie, taking in the mainland country between the northern limit of Athabaska and the Arctic sea, and being between the 100th meridian of longitude and a line about 500 miles west and parallel with the Mackenzie river. Yukon includes the district inclosed between the latter line and the northern boundary of British Columbia, the eastern boundary of Alaska and the Arctic ocean. Ungava is almost as extensive as British Columbia, and Mackenzie is larger than British Columbia and Quebec combined. Of the remaining districts, each is bigger than Ontario."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade continues depressed in almost all lines. Demand is smaller than a week ago, and request for and offerings of commercial paper have decreased. Mercantile collections continue unsatisfactory, and the tendency of prices, particularly of cereals, sugar, coffee, pork products, cotton and cotton goods, and iron and steel continues downward.

At the south, the more favorable features are the rain which has visited South Carolina, Georgia and Alabama, with benefit to the crops, about one-sixth increase in the cotton acreage of Texas, higher prices for rosin, and a larger volume of business at Nashville, Charleston and at Baltimore. Nebraska's crop prospects were never better. There is a moderate increase in demand for dry goods at Chicago, but business there generally is disappointing. The check to trade at St. Louis is, in part, the result of delays in distribution of merchandise on account of the late storm. Unseasonably cool weather and rain have interfered with retail trade in territory tributary to Kansas City.

May bank clearings, 1895, are heavily reduced, reflecting the quietness in trade and speculation. They show not only a heavy falling off from May a year ago, but are smaller than the April total, something which has occurred only twice in thirteen years. Two-thirds of the cities report smaller clearings in May this year than last, and every group reports a falling off. The smallest relative decrease is from the south. The middle and southwestern states report heaviest declines. Total clearings at sixty-nine cities for May aggregate $4,218,000,000, a decrease of 13 per cent. from May a year ago, of 1.4 per cent. from April this year, an increase of 8.7 per cent. over May, 1894, but a decrease from May, 1893, a period of industrial share panic, of 20 per cent. For five months clearings aggregate $21,277,749,614 this year, an increase of 1 9 per cent. over 1895, of 14.7 per cent. over 1894, but a decrease from 1893 of 20 per cent.

The total number of business failures throughout the United States this week, as reported to BRADSTREET'S, is 236; compared with 227 last week, 236 in the first week of June, 1895, 207 in the corresponding week of 1894, and 293 in the like week in 1893.

Eastern advices are that wool is as dull and weak as ever, with larger stocks of old carried over than for years and very light demand for new clip. In the face of this, Portland, Ore., wires that about 4,000 tons of wool will be handled at The Dalles this year, that it has begun to move, but that eastern buyers have not put in an appearance. Makers of cottons for export are doing relatively the best business. Over-supply of cotton fabric continues to depress prices. Much woolen goods machinery continues idle, and sales of woolens for fall delivery have not held up as expected. Shoes continue firm, and factories report a large number of orders on hand, which strengthens leather and hides. Iron and steel prices in some instances are maintained by the strength of pools. Either consumers are resisting demands of combinations by withholding orders or nearby wants for staple makes of iron and steel have been overestimated. Production tends to decrease.

Total bank clearings throughout the United States, as wired BRADSTREET'S, for the past six business days (no portion of the week being estimated), amount to $967,000,000, 5 per cent. more than in the preceding week, but 14 per cent. less than in the first week of June, 1895, and only 7 per cent. larger than in the corresponding week of 1894, the period of extreme depression after the year of panic. As compared with the first week of June, 1893, this week's clearings are 16 per cent. smaller, and as contrasted with 1892 they are 18 per cent. smaller.

Stock speculation at New York has been dull and professional, fluctuations depending entirely upon the political outlook with reference to the currency. At the close of the week prices are better on more encouraging views respecting the action of the St. Louis convention. The trading, however, is absolutely professional, and prices are lower on scattered liquidation by tired holders. European financial interests continue to neglect the American market. Foreign exchange has receded on offers of bills drawn against bond sales in Europe. German financiers still offer inducements for specie consignments, but the gold shipments this week are only $1,100,000. Demand sterling is 4.88⅜@4.88½. Silver has advanced on speculative buying and talk of a free silver declaration by one of the national parties.

Exports of wheat (flour included as wheat) from both coasts of the United States this week have been the largest since the third week in January, 3,209,000 bushels, against 2,064,000 bushels last week, 2,991,000 bushels in the first week of June, 1895, 2,742,000 bushels in the corresponding week of 1894, and as compared with 3,834,000 bushels in the like week of 1893.

The most significant feature of BRADSTREET'S regular monthly report of world's available wheat is in relative increases of domestic stocks at this period for several years, while supplies afloat for and in Europe on like dates have been much smaller. Leading importing countries have permitted producers to carry a larger proportion of world's stocks of available wheat since 1893. Supplies afloat for and in Europe two years ago were 80,000,000, one year ago 69,000,000, and on June 1, 1896, 47,000,000 bushels.

General business in Canada is dull, merchants buying for necessities only. Jobbers at Montreal expect a fair season's business. At Toronto demand is confined to sorting-up orders. Trade is light in Nova Scotia, but the weather has been favorable to the crops. In New Brunswick lumber shipments are active, but trade in other lines is dull. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to almost $22,000,000 this week, a very heavy increase as compared with last week, when the total was only $16,000,000. The corresponding total one year ago, however, was about $600,000 larger than it is this week, and two years ago it was about $2,400,000 smaller than for the past six business days. There are 29 business failures reported throughout the Canadian Dominion this week, against 25 last week, 27 in the week a year ago, 37 two years ago and 36 three years ago.

FINANCIAL.

The Money Market.

The supply of money available for the purposes of the New York market is as large as ever, while the prevalent inactivity in mercantile and speculative lines curtails the demand and keeps rates upon a low level. There is no particular demand for commercial paper, and the supply of choice names is still restricted, though the best class of paper is taken with reasonable rapidity. Rates are on the basis of 4@4½ per cent. for best names, and indorsed bills receivable. There is very little inquiry for time money, and the supply from all sources is decidedly excessive. Rates are 2½@3 per cent. for thirty to ninety days, and 3@4½ per cent. for longer dates. Call money throughout the week has ranged from 1½@2 per cent. Among the features of the week was the final payment of installments for government bonds and the calling in by the Treasury of $2,000,000 more of the money left on deposit with certain specially designated banks. These operations have taken several millions out of the money market without producing any special effect upon rates, and it is generally believed the government could call in the $4,000,000 left in the special depositaries without in any way disturbing the rates for money.

Discount Rates and Exchange on New York.

The New York Banks.

The bank statement issued last Friday in anticipation of Saturday's holiday covers only five days' operations of the associated banks. The principal changes in the items were given in BRADSTREET'S of last week, but the full figures as compared with those of the preceding week are presented herewith They show another considerable increase in cash holdings in the face of large withdrawals of specie for shipment to Europe, though the gain of $1,756,000 in loans and the corresponding increase of $1,800,000 in deposits are equally calculated to attract attention. As a result of the other changes the surplus reserve increases $529,175. The figures of the statement compare as follows with those of the preceding week:

	May 23, '96.	May 29, '96.	Changes.
Loans	$473,400,400	$475,156,400	Inc. $1,756,000
Specie	61,541,500	62,456,000	Inc. 914,500
Legal tenders	84,420,300	84,493,200	Inc. 72,900
Deposits	497,041,200	498,874,100	Inc. 1,832,000
Circulation	14,529,800	14,605,100	Inc. 75,300
Total reserve	145,961,800	146,949,200	Inc. 987,400
Reserve required	124,260,300	124,718,525	Inc. 458,225
Surplus reserve	21,701,500	22,230,675	Inc. 529,175

At the corresponding date last year the surplus reserve was $41,221,250, against $77,905,100 in 1894.

The Boston Banks.

	May 29, '96.	May 23, '96.	Changes.
Loans	$161,004,000	$160,727,000	Inc. $277,000
Circulation	9,848,000	9,905,000	Dec. 57,000
Deposits	101,659,000	102,237,000	Dec. 578,000

Foreign Exchange.

The appearance in the exchange market of a fair amount of sixty-day bills drawn against the sale of securities in Europe by a prominent firm has changed the tendency of rates and imposes a check on gold exports. The volume of the offerings in question is not large, but the inquiry for exchange is so limited that they produce considerable effect. The selling was in the form of sixty-day sterling. On the other hand, it is understood that the German banking influences, which are endeavoring to accumulate more gold, have made a slight increase in the premium or allowance to the shippers which very

nearly equals the decline in value here. The gold shipments for the week however, were only $1,100,000, of which $600,000 went by Tuesday's German steamer and $500,000 on Thursday.

Posted rates for demand were generally reduced on Tuesday ½c. to 4.89, making the nominal figures 4.88@4.89. This corresponded to the decline of actual rates from 4.88½@4.88¾ to 4.88¼@4.88½. The market became a little firmer on Wednesday but yielded again on Thursday under renewed selling of security bills.

* Holiday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88½@4.88¾; commercial bills, 4.86½@4.86¾; francs, 5.16⅞@5.15; reichsmarks, 95¼@95 11/16.

The Bank of England discount rate remains at 2 per cent. The bank this week gained £610,000 in bullion, and its proportion of reserve is 59.36 per cent., against 59.33 per cent. last week. In the London open market discount 13/16@⅞ per cent., and call money ½@¾ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending May 28, 1896:

	1896.	1895.
Dry goods	$1,175,012	$1,947,952
General merchandise	5,485,885	7,885,818
Totals for the week	$6,660,897	$9,833,770
Previously reported	204,988,072	211,604,414
Since January 1	$211,648,969	$221,438,184

The exports (exclusive of specie) from New York to foreign ports for the week ending June 2 were $1,882,139 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$6,166,562	$3,474,084
Previously reported	158,103,734	144,795,233
Since January 1	$164,270,296	$148,269,317

Silver.

The silver market has been excited to renewed speculative activity by the success of the free silver coinage advocates within one of the national political organizations here. This has resulted in some discussion of the probability of some benefit to the silver market and in not a little speculative buying both of bar silver and of silver deposit certificates. Trading in the latter, which had been non-existent for many months, has been resumed on the Stock Exchange. The London market for silver and silver securities at first hung back, but finally responded to the advance here. On Friday the markets tended to recede.

THE STOCK MARKETS.

The New York Stock Market.

Restricted conditions continue to prevail in both speculative and investment circles at this city. The political situation and the uncertainty as to the treatment of the currency question in the platforms of the great parties keeps the public out of the street, makes Europe utterly indifferent to American securities, and occasions marked timidity on the part of the larger speculative interest. In addition to the causes just mentioned, Congress has during the week contributed its quota to the general feeling of uncertainty and apprehension. The passage of the so-called Anti-Bond bill by the Senate and the action of both Houses in adopting the river and harbor appropriation over the President's veto, though not productive of any decided depression, have been unfavorably regarded, being considered indicative of a certain lack of appreciation on the part of Congress of the serious nature of the situation now confronting business and financial interests. Several times during the week the market has appeared to virtually go to sleep, so intense was the dullness and the lack of speculative initiative. On Friday, however, a better tone seemed to prevail in regard to the political outlook and prices were decidedly steadier in most cases with an improvement in a number of instances. Small room traders have supplied nearly all the activity, their general disposition being to sell stocks for a decline wherever an opportunity of doing so with success presented itself. Some scattered liquidation by timid or tired holders also occurred from time to time, giving the market a generally weak appearance in spite of the fact that the absence of any supply of real securities involves a tendency for the market to become over-sold, and thus create a limited amount of covering of short contract with a corresponding hardening of prices. Europe, as already indicated, continues to take an unfavorable view of the situation here, and has manifested its distrust by letting American stocks severely alone. While the release of the Transvaal prisoners gave an impetus to mining and other departments of the London market, Americans were entirely neglected or sold to a limited extent by professional traders. The market has taken no account whatever of the condition of foreign exchange, which has been somewhat weaker on the appearance of a limited supply of bills drawn against the sale of securities in London through the Messrs. Morgan. Although it is understood that the German bankers who have been successfully endeavoring to draw gold from the country have advanced the premium for allowance, which has made the recent shipments of specie possible, this week's gold shipments were only $1,100,000. General favorable crop prospects have also secured but little attention, and seem for the moment to have no effect upon the temper or action of the stock market. It may be also noted that the favorable annual reports presented by the Rock Island and Chicago & Northwestern railways fail to have any influence upon the granger share list, although under normal conditions the appearance of such documents would have certainly furnished occasion for something of a bullish movement in them.

The market's activity, so far as it can be said to have exhibited anything of the kind, centered in the industrials and particularly in American Sugar. That stock exhibited more or less weakness, the manipulation in it being apparently for lower prices, in sympathy with the reduction in the price of the refined article and the absolute unsteadiness of the raw sugar markets. On Friday, however, short covering caused a rapid recovery in the price of the stock. American Tobacco is also heavy, insiders being credited with selling it, and the current reports as to the trade war indicating that no immediate hope of a settlement is entertained. Another section of the list which attracted some attention by its unsteadiness and yielding tendencies was the southwestern railroad stocks. Missouri Pacific, which declined to 22⅝, was a conspicuous example, its fall being attributed to the poor earnings for the month of May and the damage to the company's real estate and property generally from the recent St. Louis cyclone. Texas Pacific bonds were another weak feature, the recent unfavorable earnings of the company furnishing occasion for the selling and consequent decline. Manhattan Elevated, after a decline to 101⅞, rallied on Friday to 105¾ on the submission of the company's plans for extensions to the Rapid Transit Commissioners.

Boston Stock Market.

The market has ruled quiet, with values fairly steady. Railroads have held up well in price. New York, New Haven & Hudson River closes 2⅝ points above the price a week ago. Copper stocks have been well maintained, Boston & Montana showing a gain of over 1 point. Pioneer has been active, but the price has been forced down several points, the close being at 4½. Dominion coal has been active, and closes at 13¾.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price June 4, 1896.	Price May 28, 1896.	Sales June 4, 1896.	Sales May 28, 1896.

General Mention.

Messrs. J. P. Morgan & Co., Drexel & Co., Philadelphia, and Deutsche Bank, Berlin, the managers of the reorganization of the Northern Pacific Railroad Company, notify holders of the general first mortgage and land grant bonds of the Northern Pacific Railroad Company that a majority in amount of the above named bonds having been deposited for conversion, all other holders of such bonds who desire to avail of the privilege are notified to deposit their bonds at either of their offices on or before June 30. Reorganization certificates will be issued for bonds deposited. The basis of conversion is 135 per cent. in the new 4 per cent. prior lien bonds of the reorganized Northern Pacific Railroad, with 3 per cent. in cash payable now on the old bonds, with interest due July 1. On July 1 next the basis for conversion of bonds not previously deposited will be reduced from 135 to 132 per cent.

The committee of bondholders of the Spokane & Palouse Railroad Company announce that bondholders may participate in the plan for reorganizing the Northern Pacific Railroad up to June 15. They will receive for each $1,000 bond with all unpaid coupons attached $525 in cash on January 1, 1897; $525 in new 3 per cent. general lien bonds, and $250 in new preferred stock trust certificates of the reorganized Northern Pacific Railroad. Deposits must be made with J. P. Morgan & Co.

Messrs. J. P. Morgan & Co. offer for sale at par and accrued interest $5,100,000 of the 5 per cent. 30-year consolidated mortgage gold bonds of the Milwaukee Electric Railway & Light Company. These bonds form part of $7,000,000 secured by the consolidated mortgage covering all the real and personal estate of the company now owned and hereafter to be acquired. Of the above amount $400,000 are already in the hands of the public, $1,500,000 are retained by the trustees to provide for $1,000,000 first mortgage bonds of the Milwaukee City Railway Company and $500,000 first mortgage bonds of the West Side Railroad Company, which are at present a prior lien on these properties, which bonds, when surrendered, will be held in trust as further security for the bonds now issued. The Milwaukee Electric Railway & Light Company is formed by the consolidation of the various city railways and lighting companies of Milwaukee. The net earnings of the company for 1895 were $588,496, showing a surplus of over $230,000 over the total fixed charges of the company, leaving a large margin of security for the interest of the bonds now offered, while the net earnings for the first three months of the present year show an increase of 36 per cent. over those of the same period of last year. The subscription will be opened on Monday, June 8, and will be closed on Tuesday, June 9, or earlier on notice from London, where a simultaneous issue will be made by Messrs. J. S. Morgan & Co.

F. P. Olcott, president of the Central Trust Company, and Gustav E. Kissel, of Kessler & Co., of New York, and Moses Williams, president of State Street Safe Deposit & Trust Company and of the Third National Bank, Boston, constituting a committee which was organized in February last for the exclusive protection of the first mortgage bonds of the Oregon Improvement Company, recommend the deposit of those bonds with the reorganization committee, of which John I. Waterbury is the chairman, the terms offered being the result of conferences between the two committees prior to the publication of the plan.

The Central Pacific Railroad Company has made arrangements to extend its $3,383,000 first mortgage bonds, maturing July 1 next, so that the principal thereof shall become payable in one and one-half years from that date, with interest meanwhile payable semi-annually at the rate of 5 per cent., principal and interest payable in gold, the right being reserved to redeem the bonds so extended at any time on paying to the bondholders the face value of the bonds and interest thereon at the rate of 6 per cent. per annum. The right of the bondholders to avail themselves of such extension has been reserved to such holders as prior to 20th instant shall deposit their bonds for that purpose with Messrs. Speyer & Co., New York; Speyer Brothers, London; Mr. Laz. Speyer Ellissen, Frankfort-on-Main, or Messrs. Teixeira de Mattos Brothers, Amsterdam. Messrs. Speyer & Co., referring to the above arrangement, advise bondholders that upon presentation at their office, on or before 20th instant, their bonds will be stamped and new coupon sheets affixed, free of charge.

The managers of the reorganization of the Northern Pacific Railroad Company give notice that the second installment of $3 per share in respect of preferred stock and $5 per share in respect of common stock is called, payable on or before June 26 at the offices of Messrs. J. P. Morgan & Co., Drexel & Co., Philadelphia, or Deutsche Bank, Berlin.

THE DULL SEASON.

ONLY A MODERATE VOLUME OF STAPLE PRODUCTS AND GENERAL MERCHANDISE DISTRIBUTED.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, June 5.—There is no improvement in the general condition of business, nearly all kinds of merchandise ruling dull, with the market depressed. The money market continues quiet, although time loans are firmer and names more closely scrutinized. The demand rules very slow. Business paper is quoted nominally at 4 per cent., with factory paper at 3@3½ per cent. The boot and shoe trade holds in a steady position. The factories as a rule have got plenty of orders on hand for present needs, and manufacturers are looking for no more business except at prices showing a profit in production. This affects some of the cheaper grades of staples, which opened very low in price. Leather is quiet, but the surplus has become somewhat reduced, and better prices are asked for both sole and upper leather. Hides are dull and a trifle easy, although yet costing above the parity of the price of leather. The iron and steel trade is dull, with prices only maintained through the strength of the different pools.

Providence, June 5. — General trade continues without improvement, especially in textile manufacturing, mill supplies, etc. In the manufacture of jewelry orders are light for the season, although there are the usual arrangements for expected trade.

Philadelphia, June 5.—Wool continues without change. The new clip comes in slowly and is taken up readily by manufacturers, although there are many mills that are closed or running on short time. There is a feeling that an improvement will be manifested shortly on account of increased demand. In many sections a much less quantity has been raised than last year. The past week has not developed any improvement in dry goods, the demand continuing light. Morocco and leather very much unsettled and irregular; jobbers anticipate a more healthy tone and are expecting a rise.

Pittsburgh, June 5.—No new features are noted in local trade. There is a fair volume of business

doing and prices are well maintained. There is still some complaint heard as to collections, but otherwise general business conditions are favorable. There is no particular change in iron, except that there has been a little less business done. Prices are reported firm at present quotations, and some improvement is looked for in the near future.

Baltimore, June 5.—Business continues dull. Clothing and boot and shoe houses have salesmen on the road taking fall orders, and report they are meeting with encouragement.

West and Northwest.

Cleveland, June 5.—The week develops nothing specially new in the business situation. Leading merchandise moves in fair volume, but general wholesale trade is light and unchanged. Iron markets continue quiet.

Cincinnati, June 5.—Country collections are difficult.

Detroit, June 5.—There are no special features in the trade situation at this point. The volume of business is fair in most lines. Carpenters' strike is off and the building trade is showing some improvement.

Chicago, June 5.—There is a slight increase in sales of dry goods, but clothing and shoe orders show no improvement, and trade generally is quiet, with no disposition among buyers to take more than absolute requirements. Preparations are being made for the fall trade, but merchants are not predicting a big run of orders. The situation in iron and steel continues slow and inquiries have fallen off. Manufacturers are trying to maintain prices, and the latter are nominally steady, but, to make sales, concessions have to be granted. The hide market is steady, but there is an absence of the booming tendency that characterized it a few weeks ago. Sales of leather have decreased, but tanners maintain prices. Building materials are slow for the season and the number of permits for buildings shows a good decrease from last year. The produce trade is fair. Butter, eggs and poultry are steady. Potatoes have advanced. Wool receipts, 2,287,500 pounds. Deposits have increased and the demand is not as good. Provision men are the largest borrowers. Collections are fair.

Louisville, June 5.—Trade conditions, embracing both wholesale and retail lines, continue quiet. An increase in receipts of leaf tobacco is noticed this week, but prices are low and the market has an easy tone. The new crop has been set under very favorable conditions, the acreage being about up to the average.

St. Louis, June 5.—Jobbers and manufacturers, with few exceptions, say that trade is quiet and the volume smaller than at the same period last year. The tornado is partly responsible, as freight is handled slowly and considerable time and attention is devoted to the sufferers. Supplies for rebuilding are in good demand, but prices have not been advanced. The necessary labor is scarce, workmen practically receiving their own price. Perishable goods, such as fruits and produce, are higher on account of delays. All indications point toward a rich harvest, both in quality and quantity, and fall operations are expected to be better. Lumber is firm, shipments being made almost altogether by rail. Offerings of hides are light at steady prices. Leather is firm and purchased in fair-sized lots. Pig iron and iron and steel are without life.

Kansas City, June 5.—All jobbers report fair orders for the past week, with good collections. Cold and rainy weather has had a drepressing effect on the retail trade. Live stock receipts are liberal, with low values.

Milwaukee, June 5.—There appears to be no noted improvement in the movement of merchandise, and general trade continues quiet. Collections are slow.

St. Paul, June 5.—General trade conditions remain practically the same as a week ago. Dry goods and boot and shoe dealers are passing through their dull season, but report sales for future shipment fully up to a year ago, which was an average year. Hardware and saddlery trade has all along been, and still is, good, though showing a decrease as the season advances. Collections are such as might be expected at this time of year.

Minneapolis, June 5.—The movement of staple merchandise is about as usual at this season, seasonable merchandise being quiet. Flour is active, sales being large.

Omaha, June 5.—Trade still contiues dull in all lines. Prospects were never better for a large crop than at the present time. Collections are fair.

Sioux Falls, June 5.—No new features are noted in trade circles. Prospects are favorable; collections fair.

Southern Cities.

Charleston, June 5.—Wholesalers of boots, shoes and dry goods report fall trade opening up well. Groceries are rather depressed and collections very slow. Have had good rains, and crop prospects are a little brighter.

Savannah, June 5.—Trade for the week is good. Collections are fair. Spirits of turpentine and rosin receipts and shipments are about the same. The price of spirits continues to decline, with strong demand. Factors will not sell except on private terms. Rosin is advancing, with further advance expected.

Atlanta, June 5.—No change is noted in the state of trade or collections since last week.

Augusta, June 5.—Summer dullness characterizes trade, demand for staples being only for present wants—a "hand-to-mouth" buying. Collections are fairly satisfactory. Good rains in this section improve cotton prospects.

Jacksonville, June 5.—Business is in fair condition for this time of the year. Collections are coming on fairly well.

Birmingham, June 5.—Trade is quiet. Good rains improve crop conditions.

Chattanooga, June 5.—Business is about the same. Machine shops have not been kept busy of late. Collections continue fair.

Memphis, June 5.—There is no change in the condition of business. Collections are fair.

Nashville, June 5.—Trade continues dull, with indication of slight picking up. Collections are favorable for the season.

New Orleans, June 5.—The volume of business is only moderate. Early payment of sugar bounty will insure an improvement. Cotton is moderately active. Sugar is easier and dull. The rice movement is very light.

Galveston, June 5.—Trade is generally dull for the season. A synopsis of 452 reports received from 159 Texas cotton-producing counties places increased acreage at 16.6 per cent. over last year, with crops generally in good condition, though in some sections both cotton and corn are in need of rain.

Pacific Coast.

San Francisco, June 5.—No new features are reported in commercial lines. General business continues dull and collections slow. Two ships loaded with wheat for Africa. Freight dull. Fruits, particularly oranges, for shipping purposes, are in fair demand and prices are active.

Portland, June 5.—It is estimated that 4,000 tons of wool will be handled at The Dalles, Oregon, this year. Eastern buyers have not put in an appearance yet, although the wool has commenced to move. There are strong indications that there will be little salmon canned on the Columbia river this season. Elections have interfered with business during the past week, and collections are slow.

Tacoma, June 5.—Exports for five months increased 30 per cent. over the same period last year. A Chinese steamer clears this week full laden. Wheat receipts are larger, and a cargo is loading for Africa. Local trade is quiet, but collections are comparatively good.

Seattle, June 5.—Business is opening better this month. Grain, flour, provisions, paints and oils are leading in improvement, due to better weather and increased business of loggers and mills. Good shipments were made to Alaska this week.

Canada.

Toronto, June 5.—Wholesale trade is quiet, the moving being confined to sorting-up orders. Retailers are cautious, refraining from stocking up. Wheat is dull and unsalable, while coarse grains are lower than ever before.

Montreal, June 5.—Business is inactive and featureless. Sales show that actual necessity alone is taken into consideration when orders are given. Although the market is thus restricted, still the tone is comparatively healthy. Losses by failures are light, and unless complications arise a fairly good fall season is anticipated. Railway receipts show good increases this week.

Halifax, June 5.—The volume of business during the week has been light, and buyers are very conservative in their ideas. Trade in breadstuffs and provisions has been unusually quiet. The weather has been favorable for the crops. In St. John, N. B., there is great activity in lumber shipments. General trade is dull and without special features.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

The market continues very slow in all departments, with only a hand-to-mouth business in progress. Cotton fabrics are depressed through oversupply, and manufacturers find it very difficult to market their goods except at cut prices, made regardless of cost. Some of the mills employed on export goods claim to have a steady business, but the American market is depressed. Printed fabrics are dull, while ginghams are featureless. Trade in dress woolens is very slow with both agents and jobbers. Business in fall fabrics with the former has petered out much quicker than expected, although fall purchases from abroad were very much curtailed. Men's-wear woolens are slow, and the market very unsatisfactory, with much machinery idle. Samples for the light-weight season are being prepared, and manufacturers are in hopes of a better business.

Wool.

The state of the wool market shows no improvement, trade ruling dull, with values easy and nominal in the absence of demand. Some buying is

noted from week to week, but with a good deal of woolen machinery idle, it does not take much to meet manufacturers' needs. The latter see nothing in the future to induce stocking up. The amount of old wool carried over is larger than for many years, and with values for new wools held quite firm in the country seaboard operators see but little inducement to buy the new clip. Some local operators in the country have bought fairly of the new wools at prices too high to be sold at a profit in the east in hopes of a turn for the better, but they are having that market largely to themselves. If good orders for light-weight woolens are taken it will increase the demand for wool and probably start business, but the present outlook is not very bright.

THE COST OF ARMORPLATES.

An English exchange says: "It does not often happen that details of the cost of armor are published in this country. The business is understood to be a very profitable one, which we can readily understand when it is remembered that, while ordinary boiler plates cost £6 or £7 per ton, the cost of armorplates runs up to ten or fifteen times that figure. A glimpse at the prices actually paid for armor by the nations which cultivate the luxury of a navy is afforded by some facts published this month in the United States as to the contracts for armor placed with the Carnegie Steel Company and the Bethlehem Iron Company in respect of the new warships Kearsarge and Kentucky, now being built in the United States. It seems that for these two vessels 2,800 tons of armorplates of all kinds will be required, in addition to thirty tons of bolts and nuts. The total sum quoted for the lot by the Carnegie Company was $3,140,640, and by the Bethlehem Company $3,142,465, and as the 'exhibits' upon which each of these companies were the lowest bidders were about equal in amount, it looks very much as if the estimates were what is known as a 'put-up job,' especially when we are told that there were no other bids. Some of the armor is quoted at £127 per ton; other lots fall as low as £103, while the price quoted for the bolts and nuts in every case is $400, or £80, per ton. This looks like particularly good business for the Carnegie and Bethlehem companies. We do not grudge them a good time with their armorplate contracts, which do not come every day, and which call for costly installations of plant. But we do not think that the publicity which is accorded to contracts of this description in the United States should be an equally prominent feature of similar contracts at home, especially as our business in this branch of the iron and steel industries is now so large, and has an interest for so many outside the small circle of manufacturers. No one grudges our amorplate firms good prices for good work, and we have no reason to doubt that the work is in all cases of the best, although we have not yet decided to use nickel, as they do in the manufacture of American armorplate."

IVORY PRODUCTION.

An exchange states: "The future of the ivory industry is giving a good deal of concern to those who are specially interested in it. The total consumption of ivory amounted, on an average, between the years 1879 and 1883, to 1,843,600 pounds. In the four years between 1889 and 1893 this average had fallen to 1,423,400 pounds. A reduced import and consequent rise of prices for the raw ivory caused the increased use of cheaper materials in substitution for ivory. For instance, in the first named period there were used for knife handles, combs and 'various articles,' respectively, 490,600 pounds, 409,200 pounds and 149,600 pounds, while in the latter period the figures of consumption under these three heads were 189,400 pounds, 200,000 pounds and 74,800 pounds. But there are two purposes for which no effective substitute for ivory has yet been found, viz., the mounting of piano keys and the making of billiard balls. In the first period these were credited respectively with a consumption of 354,200 pounds and 127,600 pounds, and in the latter four years with an average of 356,400 and 107,800. The size of billiard balls varies in different countries. In most of the northern countries small balls are used; in moderately warm climates medium sizes are preferred, while in tropical countries the taste of billiard players runs to the largest sizes. America and France absorb half the annual supply of balls, the remainder being taken by England, Germany and the other countries. In bad financial years the consumption of balls will run down from 110,000 or 115,000 to 80,000 or 85,000. As those elephants' teeth which are the best suited for billiard balls are getting scarcer and scarcer, great difficulty is experienced in meeting the present demand, and prices are rapidly advancing, being at present more than $4 per pound for good quality. The best teeth are those of full-grown female elephants of the higher regions of Equatorial Africa. These teeth usually weigh from 12 to 18 pounds each, but are never heavier than 30 pounds. Bull elephant teeth are often flat and diseased in the center. America, Russia, England and Italy buy the best billiard balls, while France and Germany, for the sake of cheapness, take many inferior balls, such as are obtained from the points of other teeth, and from hard West African teeth. Under the microscope, ivory is seen to consist of millions of infinitely small cells or tubes, filled with a glue-like substance. To this construction, calling to mind that of honeycomb, ivory owes the wonderful elasticity which, in combination with other qualities, is not possessed by any other substance. For perfect billiard balls the grain and weight of the different parts of the ivory would be uniform, so as to give equal balance and rolling. This accounts for the high prices that are asked for the choicest kind of billiard ball ivory. It is believed by experts that in twenty or thirty years a really fine ivory ball will be a rare article, and that with the disappearance of ivory the game of billiards will lose much of its interest. Another use of ivory for which no substitute gives satisfaction is the covering of piano keys. All good players say there is no substance that can equal ivory in smoothness and delicacy of touch. The speed of execution of the modern virtuoso, often involving several thousand finger contacts in a few minutes, is such that the most minute fraction of an increase in the 'drag' of the keys would be fatal to the success of a performance. This augmentation of 'drag' is the inevitable accompaniment of all substitutes heretofore tried. It is not surprising, therefore, that the sale of ivory keys has always shown a steady increase, and this branch of the ivory trade is the one that is likely to last the longest time."

FINANCIAL.

CENTRAL PACIFIC RAILROAD CO.

FIRST MTGE. GOLD BONDS.

OFFICE OF THE
CENTRAL PACIFIC RAILROAD CO.,
NEW YORK, June 2, 1896.

This Company has made arrangements to extend its $3,383,000 First Mortgage Bonds, maturing July 1, 1896, so that the Principal thereof shall become payable in 1½ years from that date, viz.: On January 1, 1898, with interest meanwhile payable semi-annually January 1 and July 1, at the rate of 5 per cent. per annum, Principal and Interest payable in United States Gold Coin.

The right is reserved to redeem the Bonds so extended at any time on paying to the Bondholders the par or face value of the Bonds and Interest thereon at the rate of 6 per cent per annum from July 1st, 1896, in United States gold coin, less such interest accrued subsequent to that date as may have been paid thereon before such redemption thereof.

The right of the Bondholders to avail themselves of such extension has been reserved to such holders as PRIOR TO JUNE 20TH, 1896, shall deposit their Bonds for that purpose with MESSRS. SPEYER & CO., New York, or with MESSRS. SPEYER BROTHERS, London, or MR. LAZ. SPEYER ELLISSEN, Frankfort on Main, or MESSRS. TEIXEIRA DE MATTOS BROTHERS, Amsterdam.

The extended bonds will be stamped to show the extension, and new Coupon Sheets will be annexed, representing future interest.

Copies of the Extension Agreement can be obtained at the Company's Office and at the office of the Bankers above mentioned.

The present extension is made to the date of maturity of the latest maturing Central Pacific First Mortgage Bonds, on or before which date the Company expects to arrange a long extension of the entire First Mortgage issue.

C. P. HUNTINGTON, Vice-President.

Bondholders desiring to avail themselves of the privilege of extension referred to in the foregoing notice, are advised that, upon presentation at our office on or before June 20th, 1896, their Bonds will be stamped and new Coupon Sheets affixed, free of charge.

SPEYER & CO.,

30 BROAD STREET.

Oregon Improvement REORGANIZATION.

NEW YORK, BOSTON, May 29th, 1896.

To Holders of Certificates of Deposit representing bonds or stock of the Oregon Improvement Company deposited with the MANHATTAN TRUST COMPANY, New York, or the OLD COLONY TRUST COMPANY, Boston, under a preliminary agreement dated October 8, 1895, between such holders and the undersigned Committee, and to

Holders of First Mortgage Bonds,
Consolidated Mortgage Bonds,
Preferred Stock, and
Common Stock
of the Oregon Improvement Company.

The undersigned, who were appointed a Committee for the purpose, have perfected a plan for the reorganization of the Oregon Improvement Company, which has been accepted by the holders of a large amount of all classes of bonds and stock.

Copies of said Plan may be obtained on application to the MANHATTAN TRUST COMPANY, No. 10 Wall Street, New York City, or the OLD COLONY TRUST COMPANY, Ames Building, Boston (with each of which Companies is lodged a duplicate Agreement of Reorganization), or will be mailed to any holder of bonds or stock sending his address to either of said Trust Companies.

This plan provides for the issue of the following new securities:

1. First mortgage 5% 50-year gold bonds. $5,000,000
2. Four per cent. non-cumulative preferred stock 5,000,000
3. Common stock 9,000,000

By the terms of the Plan,

First mortgage bondholders receive in cash an amount equal to the coupons on such bonds maturing June 1, 1896, to wit, $30 per bond, and 110 per cent. of the principal of such bonds in new five per cent. bonds, bearing interest from June 1, 1896.

The new first mortgage bonds not set aside for the present firsts are to be issued at no greater rate than the rate of $100,000 par value of bonds per annum, and only for the purchase of new steamships and other needed property, which is to be added to the security for such bonds.

FINANCIAL.

Holders of consolidated mortgage bonds who pay 12½ per cent. of the principal thereof, to wit, $125 per bond, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of the principal of such bonds in new preferred stock and 75 per cent. thereof in new common stock.

Holders of preferred stock who pay 12½ per cent. of the par thereof, to wit, $12.50 per share, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of par in new preferred stock and 75 per cent. of par in new common stock.

Holders of common stock who pay 10 per cent. of the par thereof, to wit, $10 per share, in four equal instalments, as provided in the Plan, receive 10 per cent. of par in new preferred stock and 50 per cent. of par in new common stock.

First mortgage bonds should be deposited, or if already deposited under said preliminary agreement of October 8, 1895, the certificates held therefor should be exchanged for reorganization receipts or certificates, at one of said Trust Companies, ON OR BEFORE JULY 1, 1896. On making such deposit or exchange the holders will receive in cash an amount equal to the interest coupons thereon maturing June 1, 1896, to wit, $30 per bond.

Consolidated mortgage bonds and preferred and common stock should be deposited, or if already deposited under said preliminary agreement, the certificates representing the same should be exchanged for reorganization receipts or certificates, at one of said Trust Companies on or before July 1, 1896.

JOHN I. WATERBURY, N. Y.,
T. JEFFERSON COOLIDGE, Jr., Boston,
E. ROLLINS MORSE, Boston,
EDWIN S. HOOLEY, New York,
JULES S. BACHE, New York,
} Committee.

SIMPSON, THACHER & BARNUM, Counsel,
10 Wall St., New York.

NEW YORK, BOSTON, June 3d, 1896.

TO THE HOLDERS OF

Oregon Improvement Company

FIRST MORTGAGE 6% BONDS.

The undersigned Committee, which was organized in February last for the exclusive protection of the First Mortgage Bonds under a Bondholders' protective agreement, recommend the deposit of bonds with the Reorganization Committee of which Mr. John I. Waterbury is Chairman, the terms offered being the result of conferences between the two Committees prior to the publication of the plan.

F. P. OLCOTT,
President of the Central Trust Co., New York.

GUSTAV E. KISSEL,
Of Kessler & Co., No. 54 Wall Street, New York.

MOSES WILLIAMS,
President of State Street Safe Deposit and Trust Co., Boston, and of the Third National Bank, Boston, Mass.

Spokane and Palouse.

NEW YORK, May 27th, 1896.

To the Bondholders of the Spokane and Palouse Railroad Company and the Holders of New York Security and Trust Company Receipts therefor:

The undersigned Committee, after negotiation with the Northern Pacific Reorganization Managers, has arranged with the latter that, pursuant to the provisions of page 14 of the Plan of Reorganization of the Northern Pacific Railroad System, dated March 16, 1896, the bonds of the Spokane and Palouse Railroad Company may participate in such reorganization, receiving for each $1,000 present bond, with all unpaid coupons attached—

$525 in cash on January 1, 1897.

$525 in the new 3 per cent. General Lien Bonds bearing interest from January 1, 1897.

$250 in the new Preferred Stock Trust Certificates of the reorganized Northern Pacific Railroad.

The present agreement with the Northern Pacific Railroad Receivers (whereby they pay a sum equal to interest at 5 per cent. per annum on the face of the present bonds), to continue to January 1, 1897, inclusive, but not thereafter, such payment to be made on July 1, 1896, and January 1, 1897.

Holders of bonds of the Spokane and Palouse Railroad Company, or of New York Security and Trust Company receipts therefor, in order to participate in this arrangement, are notified to deposit their bonds or receipts with Messrs. J. P. Morgan & Co., New York, not later than June 15th, obtaining in exchange therefor suitable Reorganization Certificates to be issued by them, entitling their holders to all the benefits of said arrangement.

Bonds or receipts not so deposited may, at the discretion of the Reorganization Managers, be excluded from the benefits of this arrangement.

The undersigned Committee is unanimously of the opinion that prompt acceptance of the foregoing proposition is for the best interests of all bondholders or receipt holders.

GEORGE R. SHELDON,
EDWARD N. GIBBS,
R. B. DODSON,
EVANS R. DICK,
WILLIAM BLODGET,
} Committee.

FINANCIAL.

All future interest of any of the bonds so designated ceases with the coupons due July 1, 1896, in accordance with the terms of the mortgage.

CENTRAL TRUST COMPANY OF NEW YORK, Trustee.

By E. F. HYDE, 2d Vice-President.

New York, May 15th, 1896.

We, the undersigned, hereby certify that the Three hundred and forty (340) Bonds were designated by lot in our presence as above stated.

GEORGE P. ROBBINS,
With Central Trust Co. of New-York.

JOHN SCOTT,
Of the Northern Pacific Railroad Company.

FRANK B. SMIDT,
Notary Public, New-York City and County.

TO THE HOLDERS OF

General First Mortgage and Land Grant Bonds

OF THE

NORTHERN PACIFIC RAILROAD COMPANY.

Holders of over a majority in amount of the above described bonds having deposited same for conversion, on the basis set forth on page 12 of the plan and agreement of reorganization dated March 16, 1896, all other holders of such bonds who desire to avail of the privilege of conversion on the above basis are hereby notified to deposit their bonds at either of our offices on or before June 30th, 1896.

Reorganization Certificates will be issued for bonds so deposited.

The basis of conversion is 135 per cent. in the new 4 per cent. Prior Lien Bonds of the reorganized Northern Pacific Railroad (on which interest from July 1st, 1896, shall be adjusted quarterly in cash), with 3 per cent. in cash payable now on the old bonds for the interest due July 1st, 1896.

On July 1st, 1896, the basis for conversion of bonds not previously deposited will be reduced from 135 per cent. to 132 per cent.

TO THE HOLDERS OF
Reorganization Certificates or Receipts
for Preferred and Common Stock
OF THE

Northern Pacific Railroad Co.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA AND BERLIN,
June 5, 1896.

Pursuant to the provisions of said Plan and Agreement, notice is hereby given that the second instalment of

$3.00 per share in respect of Preferred Stock, and
$3.00 per share in respect of Common Stock,

on account of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on June 26, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates, or receipts, must be presented so that such payment may be endorsed thereon.

J. P. MORGAN & CO.,
23 Wall Street, New York.

DREXEL & CO.,
Fifth and Chestnut Streets,
Philadelphia, Pa.

DEUTSCHE BANK,
Berlin.

A Simultaneous Issue will be made in London by Messrs. J. S. MORGAN & Co.

The Milwaukee Electric Railway and Light Company.

Issue of $5,100,000 5 per cent. 30-Year Consolidated Mortgage Gold Bonds.

Coupon Bonds of $1,000 each,
with right of registration of Principal.

Principal payable 1st February, 1926, in gold coin of the present standard, and Interest payable half-yearly, 1st February and 1st August, in like gold coin, both in New York, free from all United States, State and Municipal taxes that may be required by law to be deducted by said Railway Company from said interest, said Railway Company assuming to pay the same.

23 Wall Street,
New York, June 5th, 1896.

We offer for sale $5,100,000 of the above bonds at the price of 100 per cent. and accrued interest to date of delivery, payable 10 per cent. on allotment and the balance on or before July 6, at the option of the purchaser.

The bonds are now ready for delivery.

These bonds form part of $7,000,000, secured by a Consolidated Mortgage dated 1st February, 1896, covering all the real and personal estate of the Company now owned and hereafter to be acquired for its business of generating and supplying electric light, heat and power, together with all its incomes, rights, privileges and franchises appertaining thereto, as set forth in the said Mortgage.

Of the above amount, $400,000 are already in the hands of the public, and $1,500,000 are retained by the Trustees to provide for $1,000,000 First Mortgage Bonds of the Milwaukee City Railroad Company and $500,000 First Mortgage Bonds of the West Side Railroad Company, which are at present a prior lien on these properties; which bonds, when surrendered and exchanged for the bonds of the Consolidated Mortgage, will be held in trust as further security for the bonds issued under this Mortgage. The Mortgage further provides for the possible issue of $1,000,000 additional bonds, of which $250,000 may be used by the Company to discharge existing obligations, and $750,000 can be used only for the acquisition of additional street railway or electric light and power plants, or for new machinery and equipment, and for other like purposes.

From a letter of the Chairman of the Board of Directors, copies of which may be obtained at our office, and to which reference is requested for full particulars as to the capital and organization of the Company, and as to the security afforded by its mortgage, it will be seen that this Company is formed by the consolidation of the various City Railways and Lighting Companies therein enumerated, and thus owns and operates all the Street Railways in the City of Milwaukee, a city of 250,000 people, and of steady and substantial growth. The net earnings of the Company for the year 1895, as stated therein, were $588,496.38, showing a surplus of over $230,000 over the total fixed charges of the Company, thereby affording a large margin of security for the interest of the bonds now offered; while the net earnings for the first three months of the present year show an increase of 36 per cent. over those of the same period last year.

A copy of the Mortgage may be seen at our office.

The subscription will be opened on Monday, June 8th, at 10 A.M., and will be closed on Tuesday, June 9th, at 3 P.M., or earlier, on notice from London.

Default in payment of any amount when due will render the allotment and any previous payment liable to forfeiture.

The right is reserved to reject any subscription and to allot less than the amount applied for.

J. P. MORGAN & CO.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 13, 1896.

Congress brought its session to a close on Thursday, thus ending a waiting period, during which the attention of the country has been attracted in another direction. The session, as is well known, would have ended a week or two before were it not for the eagerness of the members to make sure of the passage of the River and Harbor bill. The period immediately preceding the meeting of the national political conventions is, of course, not a favorable time for the consideration of legislation, and the last few weeks have proven no exception to the rule. Some of the legislation which has failed of passage at the present session will probably be enacted at the next session, but that will be a short one, and the time of members of Congress will be taken up with considerations relative to matters of patronage, so that that session can scarcely be expected to be very productive in results.

For the present the attention of the public is fixed upon the political situation at St. Louis, where the Republican convention is to open next week. Most people have for some time regarded the choice of the candidate to be nominated at St. Louis as a foregone conclusion, and interest has been mainly concentrated upon the money plank to be adopted. During the week the influences making for a strong sound-money plank have been seemingly growing in force, and the prospects appear to be in favor of a stronger declaration than appeared likely a week or ten days ago. Whether this will have any effect upon the fortunes of the leading candidate remains to be seen. In the Democratic party, too, the week has seemed to favor the sound-money men, the strong declarations of the Maryland and Minnesota conventions being on the right side of the issue. The victory of the sound-money men in the latter state was not lacking in the element of surprise, the silver element being very strong in the convention. The money plank was a clear and vigorous one, declaring unqualifiedly in favor of the present gold standard of value, favoring the use of both gold and silver as money, and while expressing the belief that the government should coin and keep in circulation, as a part of the circulating medium, as large an amount of silver as can be employed without destroying or threatening to destroy the existing parity of value between the unit in gold and the unit in silver, opposing the free coinage of silver by this government at the ratio of 16 to 1 without coöperation on the part of the other commercial nations of the world.

The appropriations made by the Congress just closed amount to $515,759,820. How this compares with the appropriations of the congresses immediately preceding may be gathered from the fact that the Fifty-third Congress appropriated $989,-239,205, the Fifty-second Congress $1,027,-104,547, and the Fifty-first Congress $1,035,680,109. The record of the Congress as regards appropriations, therefore, goes beyond that of the Fifty-third Congress, and is about on a par, speaking roughly, with that of the two preceding congresses. Chairman Cannon, of the House Committee on Appropriations, in discussing this branch of the work of Congress, explains that the appropriations include $119,054,160 under permanent laws, of which amount $50,000,000 is for sinking fund and $30,500,000 for interest on the public debt, or $3,355,614 more than was included at the last session of Congress in the statements of appropriations, and is on account of the increase of $162,315,400 in the bonded indebtedness of the country by the present administration up to February, 1895, the interest and sinking fund charge on account of the later bond issue of $100,000,000 in February, 1896, amounting to $4,400,000, not being included in the estimates of permanent appropriations, as stated and submitted to Congress in the last regular estimates.

A statement in regard to the appropriations of the session just closed has also been given out by Mr. Sayers, on behalf of the minority of the committee. He says that the appropriations exceed by $23,529,135 the appropriations made during the first session of the Fifty-third Congress, and being $18,751,229 in excess of the appropriations made at the last session of that Congress. Mr. Sayers says further that the Senate, by its amendments to the general appropriation bills as they passed the House, proposed to increase the sum total of appropriations by $22,920,442. By conferences between the two houses, this aggregate increase was reduced to $12,283,-818, so that if the Senate had been allowed its way in increasing appropriation bills, the sum total of appropriations at this session would have been raised $10,-636,624 above the aggregate as it now appears.

Governor Morton has appointed what should prove to be a useful and, in some respects, a strong commission to prepare a charter for the Greater New York. Some of the members, like the mayors of the three cities, the state engineer, the attorney-general and the president of the old commission, have been provided for in the consolidation act. The members chosen by the governor include, among others, President Seth Low, of Columbia College, whose extensive knowledge of municipal affairs has been acquired at first hand; ex-Judge John F. Dillon, who is a first-rate authority on municipal law; ex-Secretary of the Navy Tracy, who has much practical knowledge of municipal matters; ex-Corporation Counsel William C. De Witt, of Brooklyn, and Comptroller Fitch, of New York city. With the experience that has been gained during the last decade, the commission should be able to frame a charter which would be a model.

The text of the Behring sea sealing claims treaty has been made public during the week. An examination of it shows that its substance was correctly summarized in the press dispatches from Washington. As has already been foreshadowed, the commissioners to be appointed are to sit at San Francisco as well as at Victoria. They are to be authorized to hear and examine on oath or affirmation, which each of the commissioners will be empowered to administer or receive, every question of fact not found by the tribunal of arbitration, and to receive all suitable authentic testimony concerning the same; and the government of the United States is to have the right to raise the question of its liability before the commissioners in any case where it shall be proved that the vessel was wholly or in part the actual property of a citizen of the United States. One of the articles of the treaty provides that the amount awarded to Great Britain under the convention on account of any claimant shall be paid by the government of the United States to the government of Great Britain within six months after the amount thereof shall have been finally ascertained. The personnel of the commission has not yet been determined.

One of the most notable resolutions presented to the convention of Chambers of Commerce of the British Empire was adopted on the last day of the congress. This was a resolution which, reciting that the British currency system of pounds, shillings, pence and farthings is a source of constant annoyance and loss of time to the trade, especially to the foreign trade, who have adopted a decimal system, and that the system of dollars and cents now covers the whole of the North American continent, with a population of 70,000,000 of English-speaking people, urged that the Canadian decimal system of currency, which answers all purposes, be extended to the other portions of the British empire, the pound sterling to be equal to five dollars and the shilling to twenty-five cents. Another resolution which was likewise adopted declared that the British system of weights and measures, which varies constantly in every part of the British empire, is a source of constant annoyance, loss of time, and a formidable obstacle to local, imperial and foreign trade, and that the metric system has now been universally recognized as the most perfect decimal system, and generally adopted by nations of both continents, with the exception of the British empire and the United States of America, and urged that the metric system of weights and measures be adopted without further delay by the several governments of the empire, the yard being extended to the meter, the quart to the liter, and the two-pounds weight to the kilogram.

British newspapers are reviving their interest in Venezuela because of the importance of looking after places "wherever the Germans have a finger in the pie." It seems that Germany has considerable capital at stake, advanced for the construction of the Great Venezuelan Railway, on which the South American republic guarantees the interest. Efforts are making to secure a further guarantee of the German loan, which, although made after several English loans, appears likely to have more than the preference in Venezuela usually shown a second or third obligation. The significance of this is not of particular interest here, other than as it indicates the progressive, not to say aggressive, policy followed by Germany in its relations with foreign countries. Another indication is found in the fact that the Germans (as well as the Russians) are turning their attention to Persia, where a German has obtained a concession of seventy-five years for the construction of a railway between Teheran and Bagdad. The same interests have secured for ninety years the right to establish electric or steam railways between Teheran and villages north of it. The rapid progress of the Germans in Persia is further indicated by the establishment of a steamboat service between Bremen and Bushire, on the Persian gulf. A German bank has also been established at Bushire.

A CHECK TO GOLD EXPORTS.

Intense dullness has continued to reign in the money and stock markets. The prevalent stagnation in the latter quarter was, indeed, broken last Wednesday by a brief spell of active liquidation. This, however, was arrested even as quickly as it began, and the financial markets continue stagnant, and wait, not without anxiety, on the political outcome. As regards the Treasury gold reserve, the situation exhibits an improvement. In another column detailed reference is made to the sale of a large block of Anaconda copper-mining shares to the Rothschild syndicate, which some months ago acquired another large interest in the capital of that corporation. The amount involved is said to be in the neighborhood of $8,000,000, and offers of bills of exchange, presumably drawn in connection with the transaction in question, have tended to keep the exchange market reasonably well supplied, and to check the tendency of bankers to supply the absence of commercial and other drafts on Europe by forwarding gold. It may be noted that no decided effort has been made to market the whole amount of exchange created in connection with the Anaconda sale, and it might also be mentioned that there is some doubt whether a portion of the money has not already been transferred to this side. Exchange rates have, therefore, not broken to any extent, but the steadiness with which demand sterling hangs at 4.88½ or a little above that figure would suggest that as a demand for drafts makes its appearance, it is measureably supplied from the source referred to. As the figure named is about that at which gold could be transferred to Germany, but without any profit to the shippers, the exports of specie from this port and the consequent withdrawals of gold from the Treasury in connection therewith have been upon a smaller scale, amounting in all to $2,400,000 for the week. Some influence may also have been exerted by the weaker tendency of the Berlin money market. It was pointed out a fortnight or more ago that the relatively higher rates for money which have lately prevailed at Berlin and Frankfort was one of the factors which rendered gold exports possible at this juncture, through arrangements with leading German banks, which involve the payment of a virtual allowance or premium to the shippers in this country. A decline in discount rates at the German financial centers, though slight, would have a tendency to discourage such transactions, though the fact that the $2,400,000 shipped went chiefly to Germany indicates that this factor has not been effectual.

The Anaconda transaction may, however, be regarded as a principal element in connection with exchange and specie exports. While an encouraging symptom in itself, it must be recollected that it is an isolated one, and has little reference to any future outlay of foreign capital in the United States while the present uncertainty in regard to our currency is permitted to exist. On this latter head there is, indeed, little difference of opinion in financial circles. The feeling not only in Wall street but in banking and large business circles throughout the country is well expressed in an interview which appeared in Friday's papers with Mr. J. Pierpont Morgan. That gentleman, who has just returned from Europe, is quoted as saying that if our foreign investors are given a basis for confidence in the stability of our currency they will invest their money here; if they have not such confidence, they will not take such a course. He added that there are millions of dollars in Europe seeking investment, a great part of which would come in this direction as soon as its owners are satisfied that it is safe to send it. In this connection, Mr. Morgan expressed the opinion that the adoption of a sound money platform and recognition of the gold standard by the St. Louis convention would go a long way towards relieving the minds of foreign investors in regard to this country's finances and starting the flow of capital in this direction.

RAILROAD EARNINGS IN MAY.

May railroad earnings, as a whole, are rather better than expected, considering the dullness of trade reported so generally throughout the country. The gain shown in the aggregate by all railroads for the month, it is true, is the smallest reported this year—smaller by 1 per cent., in fact, than for April, and only about one-half the gain reported for March. BRADSTREET'S report of bank clearings last week, it will be recalled, showed a falling off in May of 13 per cent. This heavy decrease, however, as was explained then, reflected something more than the May business of the country, because of the fact that May in every year is a period in which settlements are made of business done in preceding months. It is encouraging, therefore, to find that railroad earnings, unlike bank clearings, show a gain for the month instead of a loss, as shown in bank clearings, pointing to the fact that current business is rather better than the bank clearings' figures would indicate. It should also not be forgotten that May this year included five Sundays. It has also to be remembered that the gain shown in May this year followed a considerable gain in May, 1895, over 1894.

The total earnings of 120 railroads, covering 93,199 miles of track, were $36,777,606, an increase over May a year ago of 2.4 per cent., and following a gain in 1895 over 1894 of 6.5 per cent.

The following table, showing the increases and decreases in each month for the past three years, best illustrates the position held by railroad earnings for May and the five months' period of this year:

	1895.	1894.	1893.
June	Inc. 8.0	Dec. 22.0	Inc. 5.6
Six months	Inc. 2.5	Dec. 15.4	Inc. 4.5
July	Inc. 15.6	Dec. 19.0	Dec. 4.0
Seven months	Inc. 4.8	Dec. 19.0	Inc. 2.0
August	Inc. 1.6	Inc. .9	Dec. 13.0
Eight months	Inc. 4.2	Dec. 14.0	Inc. .8
September	Inc. 4.6	Dec. 5.3	Dec. 9.5
Nine months	Inc. 4.5	Dec. 13.0	Dec. .5
October	Inc. 6.8	Dec. 3.1	Dec. 2.1
Ten months	Inc. 4.7	Dec. 12.2	Inc. 1.0
November	Inc. 6.3	Dec. 1.4	Dec. 6.6
Eleven months	Inc. 4.8	Dec. 10.9	Dec. 1.5
December	Inc. 8.8	Dec. 1.1	Dec. 13.0
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	**1895.**	**1894.**
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0
March	Inc. 4.6	Inc. .6	Dec. 13.4
Three months	Inc. 9.5	Dec. .5	Dec. 12.6
April	Inc. 3.5	Inc. 4.5	Dec. 14.3
Four months	Inc. 8.1	Inc. .9	Dec. 13.4
May	Inc. 2.4	Inc. 6.5	Dec. 17.5
Five months	Inc. 7.0	Inc. 2.5	Dec. 14.2

The percentage of gain shown in May, it will be noted, is the smallest reported since August a year ago.

The following table shows the gains or losses in May and the five months' period this year as compared with last, by groups of roads, compared with similar returns for the three preceding months:

	February, 1896.	*March,* 1896.	*April,* 1896.	*May,* 1896.	*Five mos,* 1896.
Grangers	Inc. 22.2	Inc. 21.0	Inc. 13.6	Inc. 8.8	Inc. 17.2
Cent'l west'n	Inc. 7.5	Inc. .3	Inc. 1.7	Dec. .6	Inc. 3.8
Trunk	Inc. 6.9	Inc. 1.5	Inc. .5	Inc. 2.4	Inc. 3.3
Eastern	Inc. 5.4	Dec. 16.2	Inc. 2.5	Dec. 2.8	Dec. 1.9
Coal	Inc. 2.5	Dec. 10.0	Dec. 1.8	Inc. 3.4	Inc. 1.6
Southern	Inc. 20.3	Inc. 1.1	Inc. 3.4	Inc. 6.6	Inc. 9.6
Southwestern	Inc. 10.1	Dec. 5.4	Dec. 3.8	Dec. 9.8	Dec. .5
Pacific	Inc. 22.3	Inc. 17.8	Inc. 6.2	Inc. 8.2	Inc. 13.4
Totals, U. S.	Inc. 13.8	Inc. 4.6	Inc. 3.5	Inc. 2.6	Inc. 7.3
Mexican	Inc. 8.3	Inc. 4.3	Inc. 1.9	Dec. .9	Inc. 2.0
Totals	Inc. 13.7	Inc. 4.6	Inc. 3.4	Inc. 2.4	Inc. 7.0

The granger roads, it will be seen by the above table, retain their preëminence in the matter of increased earnings, but the southern and Pacific railroads also make a good showing, the latter group reporting a gain nearly as large as the grangers. The central western, one eastern road and the southwestern railroads all show decreases, the falling off in the latter group being especially large, 9.8 per cent. The Mexican railroads, also, it will be seen, show a fractional decrease.

The total earnings of 119 railroads for the five months' period aggregate $184,599,420, an increase of 7 per cent. This increase, it might be observed, follows an increase in the five months' period of 1895 over 1894 of 2.5 per cent. For the five months' period the heaviest gain reported is that of the granger roads, 17.2 per cent., the Pacific roads following with a gain of 13.4 per cent., and the southern roads with an increase of 9.6 per cent. The central western and trunk-line roads show increases in excess of 3 per cent. each. The southwestern roads and the one eastern road reported show slight decreases.

SUMMARY GROSS EARNINGS FOR MAY.

Roads.	1896.	1895.	*Increase.*	*Decrease.*

WESTERN UNION'S FIGURES.

The report of the telegraphic organization which virtually extends with its operations to every portion of the country is no poor index of the comparative conditions that have prevailed in general business. This week has brought with it the publication of the figures for the current quarter ending June 30, which, though based on partly estimated figures for the present month, is sufficiently accurate to furnish a basis for comparison with the actual returns of the corresponding period last year. The tabulation is as follows:

Quarter end'g June 30,	*1896.	†1895.	*Changes.*	
Net revenue	$1,500,000	$1,583,049	Dec.	$83,049
Int. and sink. fund	243,350	243,714	Dec.	364
Balance	$1,256,650	$1,339,335	Dec.	$82,685
Dividend	1,191,950	1,191,941	Inc.	9
Surplus	$64,700	$147,394	Dec.	$82,694
Previous surplus	7,638,957	7,260,083	Inc.	378,874
Total surplus	$7,703,657	$7,407,477	Inc.	$296,180

* Partly estimated. † Actual figures.

Including the above showing with the statements for the three preceding quarterly returns, the approximate results for the fiscal year ending June 30, 1896, and its comparison with the returns for the year ended June 30, 1895, may be given as follows:

Year ending June 30,	*1896.	†1895.	*Changes.*	
Net revenue	$5,997,780	$6,141,389	Dec.	$143,609
Interest and sinking fund	973,802	933,813	Inc.	39,989
Balance	$5,023,978	$5,207,576	Dec.	$183,598
Dividends	4,767,796	4,767,734	Inc.	62
Surplus	$256,182	$439,842	Dec.	$183,660
Previous surplus	7,447,475	7,007,633	Inc.	439,842
Total surplus	$7,703,657	$7,447,475	Inc.	256,182

* June quarter partly estimated. † Actual figures.

According to this it will be seen that the Western Union Company earned about 5¼ per cent. for the stock, as compared with 5 per cent. actually paid in the form of dividends. The regular 1¼ per cent. dividend for the current quarter was declared on last Wednesday.

Viewing the figures closely, the impression is favorable as regards the business of the company, and it is to be presumed that the portion of the month of June with its political conventions, and probable activity in speculation, will create a good deal of telegraphic business, and render the actual showing for the final quarter of the fiscal year better than the estimates, which, according to the custom of the company, are, no doubt, far within the margin. At the same time the decreases in both gross and net earnings for the quarter and for the year which it completes would indicate that business throughout the country has been far from attaining that degree of activity which would be reflected at once by a sensible improvement in the revenues of the telegraph companies.

THE WORK OF CONGRESS.

The first session of Congress usually goes by the name of the long session, because after meeting in December it usually lasts until summer is well under way, whereas the term of the second session expires by limitation in March. The "long session" just ended, however, was shorter than usual; in fact, it has been said that it was the shortest long session for over a generation. The record of legislative work accomplished is not a very long one. This was, of course, due in part to the fact that the House and the President were not in sympathy, while the Senate was not for any great length of time in accord with either. The meagerness of the record, however, is due in part to the policy announced by Speaker Reed early in the session, when he suggested that only the most necessary legislation should be carried through, and that the business of the country should be given a period of rest and recuperation.

A large share of the attention of Congress was devoted to international matters, and one of the most important acts passed during the session was that providing for the constitution of the commission to determine the boundary line between Venezuela and Guiana. Of the bills passed, the greater number call for no special mention in this place. The bill to repeal section 61 of the tariff law, providing for a rebate on alcohol used in the arts, should not escape notice; nor should the measures opening the forest reservations in Colorado for the location of mining claims, regulating proof of death in pension cases, providing for a naval training station in San Francisco harbor, and making it unlawful to shoot at any railway train or any person thereon, or to throw missiles into such train.

While the proportion of measures which reached the stage of enactment was small, the number of bills introduced was conspicuously large. Indeed, the number is declared in Washington dispatches to have been the largest for any first session for a quarter of a century. The measures introduced in the House during the session numbered 9,500, or more than the number for both sessions of the last Congress, and more than double that for the first session thereof. Of the number introduced less than one-fourth were reported favorably by the committees having them in charge. The number of bills introduced which failed to pass during the session was, therefore, large, and even of those favorably reported only about a tenth secured the approval of the President at the close of the session.

Of the bills which failed to pass, one of the most important was the bankruptcy bill, which, after passing in the House, has thus far been smothered in the Senate. Another measure of consequence which is still in a case of suspended animation is the Nicaragua bill, and the bill to liquidate the indebtedness of the Pacific railways is in a similar condition. The Arizona, New Mexico and Oklahoma statehood bills have yet to be definitely acted upon by Congress, as is the case with the service pension bill. Among the measures which have passed the House and await action by the Senate are the bill providing an educational test for immigrants, the labor commission and labor arbitration bills, and the bill simplifying the rules of the Pension Office in regard to private pension cases.

Some of the measures which have failed to pass met their fate deservedly. Among these, perhaps the most prominent place must be given to the Prohibitory Bond bill, which, after being passed by the Senate, was reported unfavorably by the House Committee on Ways and Means. The bond and revenue bills, which failed owing to the attitude of the Senate, were of a different character. The appropriations provided for aggregated a larger amount than usual. But two of them were vetoed—the River and Harbor bill, which was passed over a veto, and the General Deficiency bill, the veto of which was sustained by the House. It is noteworthy that the legislative activity was proportionately as pronounced in the Senate as in the House, there having been more bills introduced into that body during the session just closed than during the whole of the preceding Congress. The activity in reference to pension legislation was particularly marked. Over 2,800 bills were referred to the House Committee on Invalid Pensions, of which 700 private bills were reported. Of about 600 bills referred to the Pensions Committee 240 were disposed of. In the Senate 1,020 bills originating in that body were referred to the Pensions Committee, while 220 came from the House. In all, the Senate passed 270 of its own bills and 110 of the House bills.

THE LIFE OF THE ANTHRACITE INDUSTRY.

One of the most interesting of recent contributions to economic investigation is the series of articles upon the anthracite coal industry of Pennsylvania which have appeared in the *Bond Record* of this city. Their author, Mr. William Griffith, is a prominent authority on the subject of which he treats, and the results which he arrives at, as the result of careful and detailed examination of all phases of the question, are well worthy of being considered, both by the financial public which is interested in the securities of the coal-mining and carrying corporations, and by the communities in which anthracite serves as the fuel commonly employed for domestic and manufacturing purposes.

The conclusion of Mr. Griffith's series brings up a matter in this connection of the utmost importance. The extent of the unique geological formation which supplies the anthracite coal of Pennsylvania is limited, but it is not generally recognized how limited it is, or how rapidly the prevalent tendency of the companies to overproduce is cutting into it, and hastening the day when it will be totally exhausted. Mr. Griffith, indeed, basing his calculations upon the present rate of production of about 67,000,000 tons per annum, will be about 109 years. His estimate of the total anthracite supply of the future is a little more than 5,000,000,000 tons, a figure considerably smaller than those arrived at by other authorities. President Harris, of the Reading Company, has, for instance, put the total at nearly 6,000,000,000 tons, and Mr. A. D. W. Smith makes it no less than 6,900,000,000 tons. Even these figures, however, show that the supply is not inexhaustible, and that the policy of drawing recklessly upon it is to be deprecated.

According to Mr. Griffith's estimates, 25 per cent. of the tonnage supplied in the future will come from the Wyoming region, 10 per cent. from the Lehigh fields, and 63 per cent. from the Schuylkill district mines. Taking into consideration the fact that the transportation companies control 96 per cent. of the remaining territory, he also arrives at the conclusion that the various companies will furnish this amount for future requirements in the following proportions: Philadelphia & Reading, 42.25 per cent.; Lehigh Valley, 16.87 per cent.; Jersey Central, 17.30 per cent.; Delaware & Lackawanna, 6.55 per cent.; Pennsylvania, 6.24 per cent.; Delaware & Hudson, 2.29 per cent.; Erie & Wyoming, 1.82 per cent.; Susquehanna & Schuylkill (Coxe Brothers), 1.38 per cent.; Erie, .77 per cent.; Ontario & Western, .28 per cent.; Susquehanna Canal, .54 per cent. These figures are certainly of interest as contrasted with the percentages of output for last year, which, it seems, are the basis for the present allotment among the various anthracite producers and carriers. The latter, it must be observed, represents capacity and ability to market the product, rather than any considerations connected with the ultimate extent of the supply. The above estimate, however, will also excite remark as tending to bear out the contention of the Reading management in respect to the claims of that company for an increased proportion of the production. Mr. Griffith, it should also be observed, reflects severely upon the course adopted by the anthracite managers in producing annually 67,000,000 tons of the fuel while the capacity of the market is not more than 46,000,000 tons, 21,000,000 tons being thus raised in excess of the annual requirements. On this point he observes: This is "a situation which requires shrewd and careful management to maintain a profitable business. How long this condition can endure depends on the market and the manner in which the industry is handled by those in control. With the present rate of increase of annual consumption it ought not to continue many years, for the Wyoming and Lehigh regions, which together yield about 70 per cent. of the annual tonnage, seem to be nearing their maximum output (the Hazleton district of the Lehigh region having probably already reached this point). And future development in the Schuylkill region ought not to progress faster than is necessary to meet the demands, especially in view of the fact that the lands are so largely controlled by the transportation companies, and lands for individual enterprises are very limited and more expensive to develop than formerly."

BRITISH VIEWS OF TRADE PROSPECTS HERE.

The careless and, in some instances, useless reports on foreign trade and its possibilities sent to Washington by some American consuls a number of years ago received prompt attention at the hands of the domestic press, and it has long been a matter for congratulation that either through the efforts of the editorial office in the State Department or because of practice by our consuls American consular reports are not only being distributed and published reasonably soon after their receipt, in order to make them of value, but they are taking on a much more practical form as to substance. It is a matter of easy recollection that like reports from consuls of foreign governments, in some instances, have been modeled after those of representatives of the United States.

In view of this, it becomes of interest to note the character of some of the work being done by British consuls in the United States. An English newspaper dissects one or two of them unsparingly. It says there

can be no doubt the report of the English consul at Kansas City contains an immense fund of information, but that it is badly arranged, consisting of little paragraphs dealing promiscuously with subsoiling, divorce laws, gold discoveries, the government bond issue and smelting, all on one page, with a reference to horseless mail wagons under the head of "sanitary." Notwithstanding this, it is evident British investors and others have found much to interest them in this and similar reports recently published under the head of "The Trade of the Consular District of Chicago." The report covers 144 printed pages, of which 18 are devoted to Chicago, and the remainder to vice-consulates at Denver, Kansas City, St. Louis and St. Paul. That from Kansas City covers nearly 100 pages, but includes data from the states of Nebraska, Kansas and Missouri, Indian Territory and Oklahoma also. Concerning the foreign trade of this extensive area, the British representative declares that, as a whole, it is greater than that of "any other section of North America," the truth of which must depend upon the construction put upon the word "section." Writers of these reports apparently have a distinct taste for statistics. The Kansas City representative declares that 975,000 bicycles were in use in the United States last year, of which Kansas City had at least 8,000. On the other hand, the consul at Chicago reports the number of bicycles manufactured in the United States in 1895 at 1,000,000, and the demand greater than the supply. No explanation is offered, however, of the character or extent of the investigation on which these estimated totals are based.

Whatever may be the value of desultory statements, there is certainly a directness in the "Warning to Investors" of the British vice-consul at Kansas City. The following extracts are taken:

> British people should be very careful about placing investments in this western country; there are so many illegitimate and bogus mining, real estate, manufacturing and railroad schemes, whose main object is to get foreign capital to buy stock. My advice is "hands off" until you have proof as to the party or firm with whom you are dealing. There is considerable British and other foreign capital invested in this western country; some are good investments and others are not.

It is explained that the foundation of Kansas City is the stock yards, and that "no other city in the world can show such a marvelous gain of trade in any one line of commerce." Illustrating this, it is pointed out that the stock yards in Kansas covered only five acres in 1870, compared with 191 acres now, and that while the total number of stock handled in 1871 was slightly in excess of 167,000, valued at about £868,000, the number of live stock handled in 1895 was more than 5,064,000, and the total value more than £19,264,000. It is further stated that "Kansas City has as many railroads as any city in the world, and before the expiration of 1896 will have more than any other city in the world." Of St. Joseph, Mo., it is written: "British merchants can do business here as well as at Omaha and Kansas City, if they will seek it." Particulars as to the classes of British goods likely to find purchasers there are not given, but there are some "useful hints as to the best routes by which to effect shipments." His advice is always to choose a Gulf of Mexico port, "as the railroad haul to Kansas City is shorter than from the Atlantic, and the navigable rivers may be used for some kinds of goods."

SOUTHERN PACIFIC'S YEAR.

The system of railroad and steamship lines operated under the title of the Southern Pacific Company is one of the most important in the country. Extending from the gulf to the Pacific, and possessing large steamship lines on the Atlantic, the property covers with its operations an enormous and highly diversified portion of the country's territory. The mileage of its railroad lines is about 7,250 miles, and its stock capitalization is $120,000,000. The company itself is a proprietory corporation, which leases and largely controls, through ownership of stock and bonds, the companies which constitute its system. The report for the year 1895, which has just made its appearance in very full and complete form, is well worthy of examination, as an illustration of the recuperation of railroad business in 1895 as compared with the preceding year. The comparison of earnings and expenditure of the entire system of roads for the year yields the following results:

	1895.	1894.	*Changes.*
Gross earnings	$50,457,025	$48,971,407	Inc. $1,485,618
Operating expenses	33,242,430	32,006,915	Inc. 1,235,521
Net earnings	$17,214,589	$16,964,492	Inc. $250,097
Other income	2,376,885	1,916,625	Inc. 460,260
Total income	$19,591,474	$18,881,107	Inc. $710,357
Charges to rental and taxes	17,406,252	16,887,261	Inc. 518,991
Surplus	$2,185,222	$1,993,856	Inc. $191,366

The feature of the statistical matter accompanying the report is the large increase of tonnage, accompanied by a corresponding shrinkage in the rate received for transporting the same. This is not an unusual circumstance in connection with the reports of railroads covering the results of the past calendar year. In this case, however, the extent both of the freight movement and the shrinkage of rates are worthy of attention, even if there is nothing of a positively exceptional nature in the figures. They furnish, however, another example of a tendency which seems to assert its influence in all railroad operations, and which many authorities are becoming doubtful of the ability of the railroads to check, even by such radical methods as those involved in the new Joint Traffic Association formed by the trunk-line roads. In the case under consideration the property has been divided for convenience of operation into two divisions, the "Pacific" system, so-called, including all the company's lines west of El Paso, and the "Atlantic" system, composed of its railroads east of that point. On the Pacific system, while there was an increase of 161,705,695 in the number of tons carried one mile each, or about 7½ per cent., the rate per ton per mile, which was on an average 1¼c., shows a decrease from the average charge of the preceding year of 4¼ per cent. The Atlantic system of the company exhibits similar conditions, though not so marked as in the case of the lines on the Pacific coast, this result corresponding with the generally unfavorable business conditions which prevailed during 1895 in that portion of the country, and the somewhat more general revival in the eastern and southern states to which the Southern Pacific lines extend. The Atlantic system has an increase in the number of tons carried one mile of 52,795,841, but here the rate per ton per mile was only 0.912c., a decrease of 0.036c., or about 3 8/10 per cent. The conclusion drawn from these figures is that if the same rates had been obtained for the traffic as those which prevailed in 1895, the difference in receipts would have amounted to over $1,000,000.

A number of other very interesting matters are suggested by the report on which there is scarcely space to comment with adequate fullness. The contention of the management, set forth in the body of the report, that the average rates on the Pacific system of the company are lower than those of all the roads comprising the Interstate Commerce Commission group of lines, in which they are included, is, however, a subject of some interest, in view of the continuous warfare which a large section of the shipping and mercantile communities on the Pacific coast have maintained against the Southern Pacific Company and its management.

THE BOND SALES AND THE TREASURY.

An official account of the bond sales under the present administration and of the circumstances leading up to them is given in a communication transmitted by the Secretary of the Treasury this week in reply to an inquiry of the sub-committee of the Senate Committee on Finance. The Secretary points out that largely on account of apprehension in the United States and abroad as to the ability of this government to continue the current redemption of its notes in gold coin and maintain the parity of the two metals, the exports of gold during the fiscal year 1893, which closed June 30, 1893, reached the unprecedented amount of $108,680,844, nearly all of which was withdrawn from the public treasury by the presentation of notes for redemption. During the three months next preceding the 7th day of March, 1893, when Mr. Carlisle assumed control of the department, the withdrawals of gold from the Treasury amounted to $35,563,093, while the exports amounted to $39,709,730, and during the eight months next succeeding that date the withdrawals amounted to $50,197,219, while the exports amounted to $39,959,529, showing an excess of withdrawals over exports to the amount of $10,237,960.

These withdrawals and shipments began on a large scale in June, 1892, the last month of the fiscal year 1892, and continued, with only short periods of intermission, until the close of the fiscal year 1893. On the 31st day of December, 1892, the free gold in the Treasury amounted to $121,266,662.29, but by January 31, 1893, it had been reduced to $108,181,713.53, and on the 28th of February it had fallen to $103,284,218.91, or only $3,284,218.91 in excess of the lawful reserve, and the reserve fund would have fallen below $100,000,000 before March 1, 1893, if the Secretary's predecessor had not effected arrangements in January and February by which the sum of about $8,250,000 in gold was procured from certain bankers at New York in exchange for United States notes and otherwise.

It is further pointed out by the Secretary that during each of the months of November and December, 1892, and January and February, 1893, the public expenditures exceeded the receipts, the total deficiency for the four months being $5,810,549.52, and on the 7th day of March, 1893, the available cash balance in the Treasury was $124,613,810, which included $100,982,410 in gold, or $982,410 in excess of the lawful reserve. However, by making exchanges of currency for gold with the banks in different parts of the country, the amount was increased to $107,462,682 on the 25th of that month, although large withdrawals were made in the interval. Notwithstanding the most strenuous efforts by the department to maintain the $100,000,000 reserve intact, the presentation of notes for redemption to procure gold for shipment abroad continued to such an extent that on the 22d day of April, 1893, for the first time since the fund was established, it became necessary to use a part of it for redemption purposes, and it was reduced to $95,432,357, but it was afterwards increased by exchanges of other forms of currency for gold, so that on the 10th day of August it had been fully restored, and there was on hand $103,683,290 in free gold, but by December 30, 1893, it had fallen to $80,861,601.13, and was reduced on the 17th day of January, 1894, to the sum of $69,757,824. The cash balance then in the Treasury, excluding the current liabilities, but including the gold reserve and all subsidiary and minor coin, was only $83,961,402. Very little gold was being received on account of dues to the government, and it was, therefore, impossible to increase the reserve without resorting to the issue and sale of bonds under the authority conferred by the act of January 14, 1875, commonly known as the Resumption act. At this date there was no free gold coin in the Treasury, all the coin on hand being covered by outstanding certificates. The $69,757,824 then held as free gold was in the form of bullion.

Such were the circumstances which led to the first sale of bonds, bids for which were invited on January 17, 1894, and the incidents connected with which may be regarded as fresh in the memory of those who have followed the course of recent financial history. The proceeds of that sale amounted to the sum of $58,660,917.63, which was paid into the Treasury in gold coin and gold certificates. As the result of this sale, the free gold in the Treasury was replenished to such an extent that on March 6 it amounted to $107,446,802. By August 7 it had fallen to the sum of $52,189,500, and it was subsequently slowly replenished by voluntary exchanges of gold coin for United States notes and other currency by the banks, and by small receipts of gold in the payment of dues to the government, until November 14, when it reached the sum of $61,878,374. The frequent presentation of notes for redemption in gold by individuals and institutions not desiring it for export gave evidence of uneasiness in the public mind, and foreign exchange was almost constantly at or near a rate which made it necessary to export gold to pay bills at their maturity, and consequently withdrawals for shipment were daily threatened. It was, therefore, considered absolutely necessary for the maintenance of the public credit to resort again to an issue of bonds.

The proceeds of the second sale amounted to $58,538,500. The payments were not entirely completed until after December 1, 1894. The fact that the transaction had not been effectual to stop withdrawals of gold was soon made evident by the circumstance that in the month of December the withdrawals amounted to $31,907,221, and during the next month, January, 1895, they amounted to $45,117,738, and they continued without diminution during the early days of February, until on the 8th of that month the reserve had been reduced to $41,340,181, and several millions more had been demanded, a part of which was taken out and afterwards returned to the Treasury, on account of the temporary restoration of confidence resulting from the

fact that it became generally known to the public that measures were about to be taken for the replenishment of the reserve. In a special message sent to Congress on January 28 the President directed the attention of Congress to the gravity of the situation, and asked that the Secretary of the Treasury be authorized to issue sufficient bonds to maintain the gold reserve and cancel the legal-tender and Treasury notes. Congress, failing to act as suggested, the Secretary entered into the well-known contract with the Belmont-Morgan syndicate for the purchase of 3,500,000 ounces of standard gold at the price of $17.80441 per ounce, to be paid for by the delivery of United States bonds having thirty years to run and bearing 4 per cent interest, and the gold to be deposited at the United States sub-treasuries.

This latter transaction was a more helpful one to the Treasury than the preceding ones, for by the terms of the contract not less than one-half of the gold was to be procured abroad, and the parties with whom it was made stipulated that they would, as far as lay in their power, exert all financial influence and make all legitimate efforts to protect the Treasury of the United States against the withdrawals of gold pending the complete performance of this contract. This agreement was faithfully carried out by the syndicate, and no gold was taken from the Treasury to be used in paying for the bonds, as had been done in the two previous sales, nor was any withdrawn for shipment until after the delivery of gold in exchange for bonds had been completed under the contract. After a large part of the gold had been furnished from abroad, the Secretary, in order to prevent disturbances in the rates of foreign exchange at a critical period and create a condition which would force gold exports and consequent withdrawals, acquiesced in a departure from the literal terms of the contract requiring one-half of the coin to be procured abroad, and accepted deposits of gold then held in this country to complete the delivery.

Immediately upon the execution of the contract the President sent to Congress a special message asking that body to provide for a 3 per cent. gold bond, which would effect a saving of over $16,000,000 to the government. Congress again failed to act, however, notwithstanding the President's exhortation in this message, and that contained in his annual message of December 20, 1895, and the department was forced to its last issue under the circular of January 6 last calling for subscriptions of one hundred millions of 4 per cents. A review of the circumstances connected with the issues renders imperative acquiescence in the Secretary's opinion that the sales were necessary for the preservation of the credit of the government and the security of the business interests of the people, and that they in fact accomplished those results for the time.

ANOTHER ANACONDA SALE.

While the rush to place new company promotions before the British public is unabated, it is a fact for contemplation that American enterprises still find no favor there. A few bond issues have, it is true, been placed in London within the past month, but in every case they are the obligations of our leading municipalities or of railroads in good credit, and it must further be observed that the purchasers are not the British and continental financial publics, but bankers or banking syndicates, which, it is to be presumed, have facilities for placing them with investing corporations or large interests. There has, indeed, been some complaint in Wall street that the wily British bankers, by taking large blocks of our railroad bonds, have secured concessions as to prices from the companies, or their financial representatives, and find, whenever a market for such securities develops on this side of the ocean, no difficulty in selling them out piecemeal to American investors at a reasonable profit. It need hardly be mentioned that this course was pursued with a very considerable portion of the foreign subscription to the government loan of February, 1895, and it is to be supposed that the same thing will, if it has not already done so, occur with reference to a part of the European allotments of the latest loan, although the comparatively small amount allotted to foreign subscribers makes that of less importance than was the case with last year's operations.

Some of the cable advices in regard to the unenviable position which all American securities hold at present in the London market would indicate that distrust of our financial and currency situation has run to an extreme. One writer, depicting the feeling which exists in Lombard street, says that the mere mention of any American security or enterprise to bankers and brokers or their customers is answered by a turning of the back upon the individual who has the temerity to make the suggestion that there is anything in it. This may involve more or less exaggeration, but it is certainly suggestive that London has virtually ceased to trade in the American department of the Stock Exchange, and that foreign participation in Wall street, once such an important element in the daily fluctuations of our market, has dwindled to nothing.

Some rays, however, pierce the gloom of this situation. This week, for instance, brought with it the important announcement that the European syndicate, in which the Rothschilds are known to be interested, have purchased another large block of shares of the Anaconda Copper Company, of Montana. This transaction involves about 300,000 shares of the stock, and a purchase price of something like $7,000,000 to $8,000,000. The acquisition in question, together with the large amount which the same syndicate bought some months ago, gives it, it would appear, a virtual control of the Anaconda property. The effect of this upon the foreign exchange market has been evident and beneficial, the drawings thus created being sufficient to check the tendency to ship gold in the absence of any supply of bills. While the matter is an isolated one, and, in fact, springs from a previous transaction by the same people, it is a healthy sign, and would indicate that the largest of European financial interests do not share in the distrust which the investing public there manifest toward American securities and enterprises. This may bear good fruit in the future.

DENMARK'S TRADE ON THE BALTIC.

It would seem from the statement of a representative of the Danish Department of Foreign Affairs, who called at the editorial rooms of BRADSTREET'S last week, that a systematic and continuous effort is being made by Denmark to increase its foreign trade, not only in general, but with the United States. As pointed out by Mr. Söegaard, who was about sailing for Copenhagen, his mission has been to interest American manufacturers in the advantages offered by Copenhagen as a point of distribution for products throughout the territory of northern Europe tributary to the Baltic. It will be recalled that something more than a year ago BRADSTREET'S had an extended account of the establishment of a line of vessels between Copenhagen and some of our gulf ports, for the purpose of carrying grain and other products to Europe. It is evident from this that the work of the Danish government in interesting manufacturers and agriculturists abroad in the importance and value of their market as a center for distribution had not relaxed. The representative of the Danish Department of Foreign Affairs betrayed an acquaintance with American manufacturing interests and representative American manufacturers which speaks well for the ultimate success of his efforts. Indeed, he was then about to sail for Copenhagen with a representative of the St. Louis Chamber of Commerce, who is to make a report upon the general subject of the advantages of Copenhagen as a point of distribution for American agricultural and manufactured products, and also by one or more representatives of industrial establishments who were about to establish agencies at the capital of Denmark, accompanying whom were an hundred tons, or more, of samples.

The point made by Mr. Söegaard is not that his mission is one of pure philanthrophy—that he is trying to find an outlet for surplus manufactured products from the United States purely for the love of this country—but that he is trying to help manufacturers here who find their capacity in excess of the home demand, and, at the same time, help the commercial world in Denmark. He points out that Copenhagen commands the distributing trade of the Baltic, and explains that it is to continue to do so to a far greater extent. This is due, as was stated, not only to the advantages enjoyed by the city, on account of its geographical position, but because of the enterprise of the merchants in that country in establishing lines of steamers which to-day reach well around the world.

The point was well made that many American manufacturers make an error in supposing they have conquered Europe commercially, so far as it is possible to do so, when they have established an agency at Liverpool, or, if one pleases, at Paris or at Berlin, entirely overlooking the fact that in so doing they carry their wares in almost all instances into the midst of a competitive fight with similar products manufactured in the countries referred to. On the other hand, like products taken to Copenhagen for distribution to the Baltic countries do not go to nearly so great an extent into competition with similar productions, inasmuch as the countries referred to are more largely agricultural than industrial, and have a large consumptive capacity for industrial products, which, as stated, is not yet nearly satisfied. It was added that the mere appointment of a representative at Copenhagen by an American industrial concern, for instance, would prove unsatisfactory. Sales through a foreign agent, who would probably be supplied with only a few samples and a catalogue, would not be likely to be of large volume. To concerns producing in excess of ability to market in this country, it is important that they should send a junior member, or some other direct representative, and to establishments which are in a position to take advantage of this suggestion, it would seem as if there were certainly more than an opening. It is declared that Copenhagen is to-day practically in control of the grain trade of the Baltic, of the international trade there in packing-house products, and in the distribution of oleo throughout that region, and that the same efforts which resulted in that supremacy are making to extend the list of commodities which the capital of Denmark is seeking to handle throughout the region in which she hopes to become the commercial mistress.

CO-OPERATION IN GREAT BRITAIN.

The twenty-eighth Coöperative Congress convened recently at Woolwich, England. The congress was opened by an address by the Earl of Winchilsea, who was able to give some encouraging statistics to his hearers. He pointed out that while in 1865 there were 850 societies with a membership of 150,000 and capital amounting to £1,000,000, the number had in 1895 risen to 1,750, owning a million members and an aggregate capital of £16,000,000. There was thus in the course of the three decades more than a doubling of the number of societies; but, on the other hand, the capital had increased to sixteen times the amount held by them at the beginning of the period. The profits of the societies showed an even more remarkable rate of increase, growing from £270,000 in 1865 to £5,000,000 in 1895. This was a striking showing, indeed, for the societies represented in the congress.

Lord Winchilsea's address contained some remarks upon the general principles at the basis of the coöperative movement, and some suggestions as to lines of advance for the future. Coöperators, he said, did not allow that unchecked competition brought with it a sufficiently equitable division of profits; they were determined that every man should have a fair reward for his labor, and the movement was in itself a proof of the increasing educational and social development of the working classes. It was pervaded by a marvelous spirit of unity, which ought not to be allowed, however, to result in the creation of a privileged class. He should, he said, like to found a great coöperative society for the growth, collection and distribution of British produce. He should ask producers and consumers equally to take shares in it, allow capital to have its fair reward, say, 4 to 5 per cent., and should divide the remainder of the profits between producers in proportion to their production and consumers in proportion to their consumption, and a certain proportion for the employees of the association. There were, however, enormous difficulties in the way of forming an association of this kind at once. What had been done in the meantime was to found what had been called the British Produce Supply Association in order to open up the ground and to place the outlet and machinery for production, distribution and collection in proper order. A depot had already been established in Long-acre, which would shortly be opened, where consumers would be supplied with as good an article as could be got from abroad and at a reasonable price. The speaker said that we lived in a time when the power is passing more and more into the hands of the working classes. He did not in the least regret it, for he believed the great institutions of the country could not rest on

too broad and solid a basis. The only safeguard in connection with this which they would all like to see was that in proportion to this ever-increasing power and responsibility they might see an equal progress in the knowledge, education and social improvement of the workers. He had no doubt that would be so, and he looked forward to a great development of the coöperative movement, in which he hoped to take a humble part.

Before the congress adjourned resolutions approving of coöperation in agriculture and offering to assist as far as possible and favoring a permanent arbitration tribunal for disputes between Great Britain and the United States. In connection with the congress a coöperative exhibition was opened in the town, in which a most comprehensive showing of the work accomplished in the direction of coöperation was made. The exhibits included specimens of work from fifty-eight coöperative manufacturing societies, such as watches, gas engines, cycles, sewing silks and twists, boots, woolen and merino goods, pianos, china and earthenware, galvanized goods, needles and dress goods. The claim has been put forth by the manufacturing societies that they are able to supply their retail centers with everything that can be required at a price that allows good wages to the workmen, a fair percentage on capital, and a certain bonus at the end of the year to the consumer. This must be particularly encouraging to the promoters of the movement, for it is in the line of coöperative production that it has been weakest.

BRITISH COMMERCIAL UNION.

The question of a commercial zollverein between the component parts of the British empire was brought into special prominence at the Congress of Chambers of Commerce held at London this week. Mr. Chamberlain, the British Colonial Secretary, who acted as honorary president of the congress, welcomed the delegates in a speech in which he promised the Canadian representatives that their proposal of bringing the various portions of the British empire into a closer union by the creation of a commercial zollverein would not be met with a blank refusal by the people of Great Britain. This statement naturally attracted attention in a congress which included representatives of the chambers of commerce of all the British colonies.

In the course of his speech Mr. Chamberlain dwelt upon what he spoke of as the paramount necessity for the commercial union of the empire, which, he said, was at the root of all the problems with which they had to deal. It was his opinion that a customs union was the most feasible of all the proposals which aimed at commercial union, and it was an essential condition that Great Britain should consent to replace the import duties upon certain articles of large production in the colonies, such as corn, meat, wool, sugar, etc., but he thought the proposal to replace such duties should emanate from the colonies and not from the United Kingdom.

One of the Canadian representatives, Mr. Osler, of Toronto, accepting the lead offered by Mr. Chamberlain, moved, on behalf of the Board of Trade of that city, that in the opinion of the congress the advantages arising from a closer union of the empire would justify an arrangement as nearly as possible in the nature of a zollverein, based upon principles of the freest exchange of commodities within the empire consistent with tariff requirements incident to the maintenance of the local government of each kingdom, dominion, province or colony now forming a part of the British family of nations.

This motion was apparently too radical for a considerable number of the delegates to the congress. An amendment was immediately moved, which recited that the congress recorded its belief in the advisability and practicability of a customs arrangement between Great Britain and her colonies and India on the basis of preferential treatment, and recommended that Her Majesty's government take steps to bring about an interchange of opinions on the subject between the mother country and the other governments of the empire. Some other members suggested obstacles and difficulties of one kind or another, and the debate on the resolution was adjourned for a day. When the congress resumed its sessions it was announced on the part of the Canadian delegates that after considering the original motion and the amendment they had decided to amend the resolution so as to produce a joint Canadian resolution, which added a recommendation that the British government take steps to bring about an interchange of opinion between Great Britain and the other governments comprised in the empire, omitting the words referring to the "zollverein." The congress finally adopted a resolution, proposed by Sir Albert Rollit, affirming that the subject of the establishment of closer commercial relations between the United Kingdom and the colonies demanded careful consideration, and respectfully representing to the imperial government that if the suggestion should be made on behalf of the colonies, or some of them, it would be expedient to promote such consideration and formulate some practical plan by summoning an imperial conference which would be fully representative of the interests involved, or by such other means as the government might be advised to adopt.

The congress adopted a resolution, proposed by the Aberdeen Chamber of Commerce, declaring that the Bills of Exchange act of 1892, the Partnerships act of 1890, and the Sale of Goods act of 1893, and other consolidating statutes, have established the practicability and benefits of codifying British commercial law; that it is highly expedient that the commercial law of the whole British empire should now be embodied in a code, and that the government be memorialized to initiate the steps necessary in order to the appointment, for the purpose of drafting such a code, of a commission on which the United Kingdom and all the colonies and countries embraced in the empire shall be duly represented. Another resolution proposed by the London Chamber of Commerce urged that the laws relating to bills of exchange should be made uniform in the British empire; also that uniformity with the laws of continental powers should, wherever practicable, be established internationally.

The congress further adopted a resolution requesting the council of the London Chamber of Commerce to communicate with the imperial and colonial postal authorities for the purpose of recommending that the reply letter card (used by France and Ceylon for inland correspondence) be adopted by the British Imperial Postal Service, as a means of facilitating and increasing intercourse through the British empire; that the reply letter card is applicable to international communication in the same way as the open reply post-card, and that the recent objections raised in regard to it can be met, and that at the Postal Union Congress, to be held at Washington in 1897, the British and colonial postmasters-general be requested to take steps for the extension of the reply letter card to international postage, as an efficient substitute for the oft-proposed international postage stamp, and less open to the objections raised on the ground of the financial difficulty involved. In line with this was the recommendation subsequently adopted that an imperial postal union be organized on the basis of an extension of the local rates of each of the several governments entering the union to the postal matter addressed respectively to those various portions of the British empire.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

The excitement in the Chicago wheat pit early in the week, together with the rapid fluctuation in price, attracted more than local attention. The Philadelphia *Ledger* explains in its editorial columns that in consequence of the interest manifested, with other price-making influences, the quotation rose from 62⅛c. to 63½c. and sank again to 60⅞c. The foregoing is not calculated to shock or annoy the most sensitive, but what followed in the way of comment is more than surprising, considering the conservatism and special intelligence generally underlying what appears in that paper. It said: "This is not legitimate business. It is not buying and selling for a reasonable margin of profits. It is not even speculating on known or estimated conditions of crop and markets. It is gambling pure and simple, and that in one of the prime necessities of life. The farmers who complain of hard times have not nearly so much reason to censure the 'gold bugs' of New York as the wheat gamblers of Chicago." It has become easy for those who investigate largely on the surface to refer to transactions in Wall street and the wheat pits of the legitimate exchanges as "gambling." The Philadelphia paper named is, perhaps, the last in the country which would have been accused of falling in line with those who see only "gambling" in the purchase or sale of commodities on a margin, for which commodities the purchaser has no personal need. The transactions complained of, as quoted, do not constitute "gambling," either in law or morals. They are distinctly in line with purchases of real estate, by the payment of only a portion of the price in cash, the balance being on mortgage. If a man with money, brains and foresight enough buys a large tract of comparatively valueless land in the belief that twenty years hence it will become very valuable; if he pays only one-tenth of its purchase price in money, gives a mortgage for the remainder, and pays interest on the mortgage for years thereafter; if example is contagious and others buy neighboring property similarly, then they are all "gamblers," pure and simple, even though when the mortgages become due they be paid in full, and the owners of the property sell it again at an advance, because they cannot eat it and do not want to build on or cultivate it.

CURRENT BUSINESS NEWS.

Industrial.

The street railway strikers in Milwaukee have unanimously decided to continue the strike.

The southern iron and steel market still shows depression, but the output of the mills continues large, and a moderate volume of business is being transacted. The Chattanooga *Tradesman* says: "Prices are nominally unchanged. They are higher than at this time last year, but the cost of production is also higher. Demand is light."

A company of American capitalists has been incorporated under the title of the Russian-American Manufacturing Company, which will build a plant for the construction of locomotives at Nijni Novgorod, Russia, in connection with the Sormova Works there. The new plant will be controlled jointly by the Russian and American companies.

Commercial.

The harbormaster at Tacoma makes the following report concerning the ocean commerce of that port for the month of May: Imports consisted of two cargoes of Oriental merchandise valued at $285,878, which, with imports previously reported this year, $898,000, makes the total value of imports for the past five months $1,183,878, as compared with $2,352,250 for the same period last year. Exports included 122,931 bushels of wheat to Liverpool, valued at $77,450; 13,313 barrels of flour to Hongkong, $38,436; 9,920,230 feet of lumber to Australia and coast ports, $96,989; 23,155 tons of coal, $69,465; 10,003 cases of canned salmon to Liverpool, $50,015; general merchandise to Japan and China, $79,800, and general merchandise to British Columbia, $23,249, making the total value of exports for the month of May $435,404. The total for the past five months is $2,679,205, compared with $1,963,101 for the like period in 1895. Inward registered tonnage, 53,293; inward cargo tonnage, 3,613; outward registered tonnage, 41,510; outward cargo tonnage, 51,300; deep sea arrivals 37 and departures 36.

Acreage of wheat percentages of areas harvested last year have been obtained by the Agricultural Department from a greatly enlarged list of correspondents. There has been some diminution of winter wheat area, owing to the total failure of the crop in some sections, the ground being plowed up for spring wheat or oats. These returns reduced to acres give for the principal winter states: California, 3,011,000; Kansas, 2,684,000; Ohio, 2,422,000; Indiana, 2,294,000; Illinois, 1,906,000; Missouri, 1,418,000; Pennsylvania, 239,000; Michigan, 1,202,000; total winter area, 22,794,000 acres. Spring wheat states: Minnesota, 3,200,000; North Dakota, 2,530,000; South Dakota, 2,463,000; Nebraska, 1,224,000; total spring wheat area, 11,825,000 acres.

The condition of spring wheat indicates a prosperous yield that closely approximates a full or normal crop, the average for the country being 99.9 per cent. The average for the year 1895 was 97.8. The averages for the principal spring wheat states are as follows: Minnesota, 92; Wisconsin, 110; Iowa, 103; Nebraska, 105; South Dakota, 111; North Dakota, 103; Washington, 86; Oregon, 95. The percentage of the combined winter and spring wheat acreage is 101.7, and the condition of all wheat is 87.6.

The Texas corn acreage is reported one-fifth less than in 1895. Most states report condition and acreage good.

The New York *Chronicle* reports the cotton acreage increased 12.9 over 1895. The May government report was 14.8 increase. A commission house reports it 14.5. Texas advices report their increase will be 16.5 per cent. over 1895, as announced in BRADSTREET'S last week, and that the increased acreage is taken off the corn acreage.

A consular report from the City of Mexico says that "the Mexicans are taking advantage of the scarcity of Florida oranges and are shipping their supply of the fruit to this country. Last season 400 carloads were shipped to the United States, but this season fully 600 carloads will be exported."

The secretary of the National Association of Cigar Manufacturers of New York has "sent to Secretary Olney a letter with reference to the tobacco embargo laid upon Cuba by General Weyler. The communication affirms that if the existing contracts for the delivery of leaf tobacco purchased on the island of Cuba cannot be enforced, enormous pecuniary losses will result and great hardship be entailed on many thousands of employees in the United States. An appeal is also made to the Secretary of State for protection, and it is requested that such action be taken for the conservation of the important interests of the American citizens involved as may seem proper."

Another great fair is to be opened June 29 in the Grand Central Palace, New York city. "It will be a permanent commercial exhibit of all nations, under the direction of the International Permanent Exhibition company, and will be a fair and place of entertainment combined."

A late copy of Beerbohm's *List* says: "The shipments to Europe (wheat and flour) from the various countries since August 3 (forty-one weeks) compare as follows with last year:

	Quarters— 1895–96.	1894–95.
America and Canada	11,056,000	13,250,000
Russia	11,156,000	11,765,000
Roumania and Bulgaria	6,140,000	2,965,000
India	1,153,000	1,203,000
Argentina	1,868,000	4,352,000
Australia	....	892,000
Sundries	2,430,000	2,215,000
Totals	33,803,000	36,742,000
Weekly average	824,800	896,000
Estimated requirements	875,000	875,000

This statement shows that Russia has again assumed the leading position as a wheat exporter, America taking second place. The great increase in the Roumanian and Bulgarian shipments (which this season are the largest on record) is also noticeable."

Stocks of wheat in private elevators at St. Louis on June 1 were 243,000 bushels.

Referring to BRADSTREET'S reports of stocks of wheat on May 1, in the United States and Canada, as 83,572,000 bushels, against 90,604,000 bushels in 1895, and 91,463,000 bushels in 1894, Dornbusch, London, says: "So far as the accumulation east of the Rockies is involved the difference between the three years is unimportant; it is in the Pacific slope stocks that the discrepancy is apparent. Judging from prognostications indulged in early in the cereal year, it was not contemplated that at this time the eastern states would hold anything like the present quantity, but the fact cannot be hid from European eyes that in America and probably in Russia there is much more wheat knocking about than 'was dreamt of in the philosophy' of statisticians."

The *American Agriculturist* says: "Farmers' institutes are a good thing. Throughout Pennsylvania during the past season 159 institutes were held at a cost of $6,500, as against $9,500 for 148 institutes the preceding year. The state agricultural department is now having prepared for gratuitous distribution the following bulletins: How to skin and stuff a bird; some common and injurious insects and parasitic fungi, with remedies for destruction; trout culture for the farmers, and the furred and feathered enemies of the finny tribe; the English sparrow and his relation to agriculture and horticulture; diseases of poultry and the enemies of domestic fowls. An estimate of the department places the damage done the poultry interests in the state every year by hawks, owls, minks, weasels, foxes, etc., at $750,000, while the damage to crops by the ravages of insects is placed at $5,000,000 annually."

Financial.

The following securities were sold at auction this week at New York:

200	Shares New York & Harlem Railroad Company, $50 each	290½
130,000	Shares Gloster Mining Co. (Montana), $5 each.	$4000
$5,000	Atlantic Mutual Insurance Co. scrip of 1892	102¼
100	Shares American Waltham Watch Company	130
621	Shares Brooklyn City Railroad Company	166
100	Shares International Goodyear Shoe Machine Company	$10.50 per share
50	Shares Central Pacific	14
19	Shares Morris & Essex Railroad Company	163
14	Shares Washington Life Insurance Company	162
28	Shares Stuyvesant Insurance Company	80
25	Shares American Cotton Oil Company, pref.	53⅞
50	Shares American Cotton Oil Company, common	10⅞
132	Shares New York, New Haven & Hartford	173⅛
17	Shares Central Railroad Company of New Jersey	103½
$1,500	Brooklyn City Railroad Company 1st 5 per cent.	112¼
$1,000	Central Railroad Company of New Jersey consolidated 7 per cent.	109⅛
$1,000	Brooklyn Rapid Transit Company 5 per cent.	78
79	Shares Brooklyn Rapid Transit Company	23⅜
$4,700	New York, New Haven & Hartford 4 per cent	132
45	Shares Equitable Trust Company, New London, Conn.	$20 lot
18	Shares Swarthmore College	$1.50 per share
$2,500	Missouri, Kansas & Texas 4 per cent.	82¼
$2,000	Missouri, Kansas & Texas 2d 4 per cent.	56
$1,000	Chicago, St. Paul, Minneapolis & Omaha consolidated 6 per cent.	125½
$1,000	Central Railroad of New Jersey 7 per cent.	116
$1,500	Mobile & Ohio 4 per cent	65½
$1,000	Northern Pacific 3d mortgage	70⅛
3	Shares Pennsylvania Coal Company	335
1	Share Delaware & Hudson Canal Company	129
3	Shares Minneapolis & St. Louis 2d preferred	45
230	Shares Mapes-Reeves Construction Company	2
$5,000	Kingston Water Company 1st 6 per cent.	110¼
25	Shares Franklin Trust Company of Brooklyn	220
25	Shares People's Trust Company of Brooklyn	220½
5	Shares Importers' & Traders' National Bank	534¼
7	Shares Chatham National Bank	300
5	Shares Title Guarantee & Trust Company	300
5	Shares American Exchange National Bank	169⅜

The New York *Journal of Commerce* says that the fire loss of the United States and Canada for the month of May, as compiled from its daily records, "shows a total of $10,618,000. This is nearly $3,000,000 more than the sum charged against May, 1895."

The Treasury Department has called upon the depository national banks for the rest of the government deposits. "The amount thus to be paid to the Treasury is $4,500,000, and will finally complete the last bond operation."

The American Sugar Refining Company has declared a quarterly dividend of 3 per cent. on its common stock, and on that portion of its preferred stock that is entitled to quarterly dividends 1¾ per cent., and on that portion that is entitled to semi-annual dividends 3½ per cent., payable July 2.

The report of the Western Union Telegraph Company for the quarter ending June 30 shows, with results for the present month estimated:

	1896.	1895.	1894.
Net revenue	$1,500,000	$1,600,000	$1,455,073
Interest and sinking fund	243,350	243,400	240,395
Balance	$1,256,650	$1,356,600	$1,214,678
Dividends	1,191,950	1,191,940	1,185,037
Surplus	$64,700	$164,660	$29,641
For twelve months (approximate):			
Net	$5,997,779	$6,141,390	$5,792,483
Interest and sinking fund	973,350	933,813	971,606
Dividends	4,767,795	4,767,734	4,740,063
Surplus	256,634	439,843	120,814

The Western Union earned net in the year ending June 30, 1893, $7,496,037, in 1892 $7,398,548 and in 1891 $6,605,585.

The P. Lorillard Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable July 1.

The United States Rubber Company has declared a semi-annual dividend of 4 per cent. on its preferred stock, payable July 15.

The Commercial Cable Company has declared a quarterly dividend of 1¾ per cent., payable July 1.

The Westinghouse Electric and Manufacturing Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable July 1.

The Edison Electric Illuminating Company of Brooklyn has declared a quarterly dividend of 1½ per cent., payable July 15.

The Western Union Telegraph Company has declared a quarterly dividend of 1¼ per cent., payable July 15.

Railroads.

The following railroads report gross and net earnings for April this year and last:

	Gross earnings— 1896.	1895.	Net earnings— 1896.	1895.
Alabama Gt. South'n	$102,742	$113,064	$9,516	$17,614
Allegheny Valley	193,124	206,955	69,381	89,976
Atchison	2,203,270	2,330,391	558,321	383,832

* Deficit.

The all-rail east-bound shipments of dead freight from Chicago last week were 64,108 tons, against 40,311 tons the previous week and 51,718 tons the corresponding week of the previous year.

As explaining the decrease of Minneapolis & St. Louis Railway earnings in May, Mr. A. L. Mohler, general manager of that road, writes BRADSTREET'S: "We have double the quantity of grain in our cribs and elevators compared with a year ago, and a very much larger quantity in the hands of farmers. Low prices and the impassable condition of country roads for the last six weeks explains the temporary decrease."

The New York Produce Exchange special committee on freight discriminations has passed upon a list of complaints against the trunk-line railroads. These will be laid before the Interstate Commerce Commissioners.

Miscellaneous.

In *Harper's Weekly* it is pointed out that "the newness of American life was illustrated the other day (May 27) at Minneapolis, when seven thousand school children, in relays of a thousand, hauled the first house ever built in Minneapolis through the streets of the town to the site that had been arranged for it in Minnehaha park. The house was built forty-seven years ago, and not only has it survived, but its builder is living too, as well as his wife, who came from New York to live in it."

In the *Journal of Military Service* Captain Jocelyn writes that, "with its mild climate, arable land and great quantities of fish and game, Southeastern Alaska offers an excellent field for experiment in colonization of a certain kind. Norwegian, Danish and other North European peasantry live under much more disadvantageous conditions at home than they would encounter here. Settlements of these hardy seafaring people would be of great advantage to the territory in forming the nuclei of a permanent population. Each family could on a few acres of ground raise sufficient potatoes, turnips and other vegetables for its own use or for sale in the mining camps, which will each year increase in number. Fish and venison would furnish the meat supply, while employment could be found when wanted in the mines and canneries."

Foreign.

In German southwest Africa, Captain Estorff defeated the Hottentots in two battles near Gobabis on the 18th and 19th of April. On the 7th of May "Major Leutwein, supported by a number of natives, stormed the headquarters of the insurgent Herero Chief Kahimema. Lieutenants Schmidt and Eggers and two non-commissioned officers were killed."

The *Northeastern Lumberman* says: "The return of business prosperity is more apparent in Great Britain, France and Germany than in the United States. Even Mexico, Japan, the Argentine Confederation and Australia show greater business improvement than this country. In all these countries the consumption of lumber is increasing faster than here. We have been passing through three or four years of depression, but we believe 1897 will show great improvement. Our natural resources are boundless."

A dispatch from St. John's, Newfoundland, says an enormous iceberg almost completely bars the narrows at the entrance to that harbor and has caused great damage to the vessels entering that port. "Over 100 craft have been forced to anchor off the entrance, many being seriously injured by colliding with each other."

With scarcely an exception, reports of the Russian winter wheat and rye are favorable, and in Tambov they are said to present an excellent appearance. The spring crops in the earlier districts are thriving, and the sowing is almost completed under favorable conditions. Reports from Poland are satisfactory. It is expected that when farmers have finished field work the supply of grain at the seaboard will increase.

The trade of South Africa would seem to be prosperous. Imports of the Cape for nine months amounted to £16,107,444, as compared with £9,644,105 for the corresponding period last year. The exports are also steadily on the increase. The total for nine months is £12,656,699, against £9,983,602 for the nine months of 1894-95. To this increase of £2,655,753, diamonds contributed £1,228,273, gold £656,967, and Cape produce £787,857; for the last quarter, however, both diamonds and gold show a slight decrease, while Cape produce shows an increase of over a quarter million.

An Ottawa dispatch says a Canadian steamer has been sent to the west coast of Vancouver Island to prevent the illegal shipment of Canadian Indians as hunters by American sealing vessels.

According to a project drawn up by the Viceroy Chang-Chi-Tung for the reorganization of the Chinese army, by drilling it on German lines, he proposes to form, in the first place, a corps consisting of eight battalions (250 men each) of infantry, two squadrons (180 horses each) of cavalry, two battalions (200 men each) of artillery, and one battalion of 100 engineers.

The formation of a new company to establish iron works in Southern Russia is announced. The capital stock is 4,000,000 rubles gold ($3,000,000), and the chief promoters are the Dresdener Bank and the Sachsener Maschinen Fabrik, of Chemnitz. "The company will build blast furnaces, a foundry, a steel plant, a rolling mill and machine shops. Besides castings, bar iron and steel and rails, the works will manufacture steam engines and locomotives also."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Husband and Wife—Gift.

The Supreme Court of Georgia held, in the recent case of Kimbrough vs. Kimbrough, that where a husband with his own money purchased and paid for a home, and deliberately and intentionally had the same conveyed to his wife, with no understanding or agreement that he was in any event to have an interest in the title, the transaction amounted to a gift from the husband to the wife, and as between them the property became absolutely her separate estate.

Banks—License—Louisiana Law.

The Supreme Court of Louisiana held, in the recent case of The State ex rel. Huson vs. Bank of Mansfield, that banking institutions incorporated under the banking laws of the state with a capital less than the minimum, expressed in paragraph 13 of the revenue license law, cannot be required to pay license; that the legislative intention to levy a license must be distinctly shown, and cannot be extended beyond the clear import of the words of the statute, and that if it was not the intention of the general assembly to exclude them from the terms of the law, the omission cannot be supplied by construction.

Insurance—Accident—Faulty Materials.

In the case of Henderson et al. vs. Sun Mutual Insurance Company et al., recently decided by the Supreme Court of Georgia, it appeared that damages having been sustained by plaintiff's holding by the falling of an adjacent building, occasioned by fire, the insurance company availed itself of an option on its contract to repair the injury. In the meanwhile, the necessary repairs being in course of completion, an accident was caused by the faultiness of the materials used and the carelessness and negligence of the workmen in the defendant's employ, whereby the building collapsed and was rendered untenantable and the tenant was rendered unable to continue his occupancy. The court held that plaintiffs had stated a cause of action upon alleging these facts for the recovery of damages ex delicto from defendants.

Railroad—Cattle—Loss—Liability.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. Robinson, that where two car loads of cattle shipped a distance of 144 miles should at least have reached their destination at a very early hour in the morning of the next day after they were shipped, but did not in fact reach there until 9 or 10 o'clock next morning, and too late for that day's market, for which they were intended, some of the hogs having died from suffocation on account of the delay, which was not satisfactorily accounted for, the railroad company was liable for that loss, and also for the keep of the stock until it could be offered in the first regular market succeeding its arrival, and that this was true, though no written notice of the loss of the hogs was given the company as required by the contract, there being proof that such notice was waived by the general freight agent of the company.

Corporation—Shareholder—Dissent.

The Supreme Court of Minnesota held, in the recent case of Pinkus vs. Minneapolis Linen Mills et al., that where an act done by the directors of a corporation is in fact unauthorized, but was done with the bona fide intention of benefiting the corporation, a shareholder knowing thereof, who does not dissent within a reasonable time, will be presumed to have assented to the act, if his failure to dissent is unexplained. In the case before the court it appeared that the business of the defendant corporation was a failure, and was indefinitely discontinued to save further loss; that it was in debt, but its plant was not salable for money at a fair valuation; that thereupon the directors, with the approval of all of the shareholders except the plaintiff, in good faith in exercise of reasonable business prudence, exchanged a part of the plant for paid-up shares of the capital stock of another corporation which was a going concern and authorized to engage in the business of manufacturing knit goods, and that the articles of incorporation of the defendant company did not authorize such exchange, but the plaintiff was fully advised of the transaction at the time (but not before) it was completed, and he in no way dissented or objected to the exchange for more than two years; but in the meantime the directors took no steps to rescind the sale, but sold the balance of the plant and paid the debts of the corporation. The court held that the plaintiff, as such shareholder, could not maintain an action to recover from the directors and the corporation his proportionate share of the property so exchanged.

Statute of Limitations—Debt.

The case of Patterson, Adm'r, vs. Blanchard, recently decided by the Supreme Court of Georgia, arose upon an action brought by an administrator for money deposited by his intestate, a non-resident of the state, with a partnership of which the defendant was the survivor, and based upon a "writing obligatory" acknowledging the receipt from the intestate for her account, of a specified sum, and concluding with the words, "We are to allow you 8 per cent. on the amount," but specifying no time for payment. The declaration alleged that the intestate died in 1884 without having demanded payment of the sum so deposited, and that there had been no representation upon her estate until 1891, when, for the first time, her administrator demanded payment and the same was refused. The court held that it was error to dismiss the action on the ground that the same was barred by the statute of limitations; that there was no liability to pay until after demand, and that consequently the statute of limitations did not begin to run in favor of the debtor until after demand had been duly made and payment refused.

Partnership—Sale of Interest—Accounting

The Court of Appeals of the District of Columbia held, in the recent case of Baker vs. Cummings, reported in the Washington *Law Reporter*, that one member of an active, existing partnership cannot claim an extra share in the profits realized from the partnership business on the ground that he has contributed to that business a greater amount of time and services than his copartners; that where a sale by one partner to his copartner of the former's interest in certain of the partnership business is annulled for fraud practiced by the purchasing partner and an accounting ordered, the purchasing partner will be required to account to his copartner for the full share of the latter in the profits of the business the subject of the sale, and will not be allowed extra compensation for services rendered by him in respect of such business subsequent to the sale so annulled, and that a decree confirming the auditor's report, which report shows a balance due from the purchasing partner to his copartner and calculates interest thereon to a period at which it was expected the court would act upon the report, is not erroneous in allowing interest upon the aggregate of principal and interest found by the auditor to be due from the date to which that officer had calculated interest until paid.

Railroad—Action—Injury to Property.

The Kentucky Court of Appeals held, in the recent case of Johnson vs. Owensboro, etc., Railway Company, that in an action against a railroad company to recover damages for injury to plaintiff's property resulting from the construction of defendant's road in front of her lot, and the throwing up an embankment there for the roadbed, where it appeared that the ground on which that part of defendant's road was located was at the time the road was constructed outside the city limits, although intended as an extension of one of the streets of the city, the fact that it was afterward brought within the city limits did not give to the city council the right to compel the railway company to remove its tracks from that part of the street which was outside the city limits at the time the road was constructed, as the right to maintain the road there had vested in the company before the extension of the city limits, and the right was not derived, either directly or indirectly, from the city or its government, and this was true although the company had failed to comply with the terms upon which it was permitted to use that part of the street inside the city limits at the time the road was constructed; that, therefore, the question of limitation was not affected by ordinances of the city requiring the removal of the tracks in front of plaintiff's property; that an allegation in the answer that twenty-two years had elapsed from the making of the embankment before the commencement of the action was sufficient foundation for the plea of limitation, without a statement of the date or time when it was made, it being reasonably clear that the making of the embankment in front of plaintiff's lot was coincident with, if not prior to, her ownership of it, and that the right of action, if any, accrued when the embankment and roadbed were constructed in front of plaintiff's lot, if she owned it then, and the action was barred in five years after that time.

BUSINESS NOTES.

Oat Crop Report.

The preliminary government report places the acreage of oats at 98.9 per cent. of last year's area, and the general condition at 98.8, against 84.3 same date 1895. The acreage of rye is 96.9 of last year's, the condition of same being 85.2, against 85.7 last June. The acreage of barley is 89.9 per cent. of the area of 1895, and its condition stands at 98 per cent.

Admitting Foreign Ores.

The *American Manufacturer* says: "Something of a change has been made in Canadian tariff regulations on pig iron. An act passed by the Dominion Parliament in 1894 authorizes the governor-in-council to pay a bounty of $2 per ton on all pig iron made in Canada from Canadian ore, any foreign ores that may be used as admixtures not to be included in the computation when claims for the bounty are being made. A few days since an order was issued amending the regulations and allowing bounty to be paid on pig iron which has been made partly from Canadian and partly from foreign ore."

Agricultural Credit Banks.

Before the Royal Statistical Society, at London, recently, a paper was read by Mr. R. A. Yerburgh, M.P., president of the Agricultural Banks Association, on "Coöperative Credit Banks, with Special Notice of the Raiffeisen System." Mr. Yerburgh claimed that the supply of capital on easy terms and for long periods would be found to be of immense advantage to those occupied in cultivating the soil, and that the system, which had worked such great good in Germany, Italy and Austria, would be equally successful in the United Kingdom.

American Tinned Meats in Germany.

The Berlin Foreign Office has issued a communication to the press in regard to malpractices indulged in by American tinned meat importers in Belgium and Holland, who are alleged to be tampering with the cans and sending to Germany, under forged declarations, meats which have not been certified to by the American inspectors. As a consequence of this practice restrictions have been ordered which affect all American exporters of meats. The *Deutsche Fleischer Zeitung* makes a vicious attack upon the American lard product, which the paper asserts is refined chiefly with cottonseed oil.

Effect of "Bicycle Boom" on Trade.

The New York correspondent of the Philadelphia *Ledger* writes to that paper that "there has been much discussion of late as to the effect on other trades of the big boom in bicycles. The New York *Journal of Commerce* recently had a long editorial on the subject, and trade papers have generally discussed it. To-day the New York *Journal* devoted a page to the matter. It estimates the loss to other trades at $112,500,000 a year, and yet it leaves out of its calculation several items that might with reason have been incorporated. It has been generally known that the livery business and the carriage trade had been seriously hurt, but it has lately been made known that the demand for pianos, jewelry, watches and confectionery has fallen off materially. It is stated that less whisky and lager are drunk, fewer cigars smoked and fewer books bought on account of the bicycles. The theaters complain that they are obliged to close much earlier in the season because their patrons prefer wheeling to seeing plays. One way of arriving at the financial effect of the bicycle craze on a different basis than that of the *Journal* is to estimate the year's output of wheels at 1,000,000. As the average cost of wheels is about $75, it follows that $75,000,000 will be expended this year for wheels, and is thus diverted from other lines of trade. What is gain for the bicycle makers is a clear loss to other business men."

The Uganda Railway.

The London *Times* says: "In a memorandum on the Uganda Railway just issued to Parliament it is stated that 1,100 coolies and artisans from India are on the spot, 1,000 more are expected, and it has been found practicable already to employ native labor. Plant and material for about thirty miles of railway have been purchased and dispatched, and stores in considerable quantities have reached Mombasa. The engineers have been making careful surveys of the coast section and generally organizing the base of operations at Mombasa, so as to insure that the works inland will proceed expeditiously and economically. Early in 1895 the question of cost was referred to a committee, which concluded that it might be possible to construct a line of three-foot gauge, and with very light rails, for £1,755,000. It is now found that, in view of various considerations and of unforeseen contingencies, the committee would not be justified in advising the provision of less than £3,000,000. The estimate for the work of the current year is £520,000. It is hoped that as much as one hundred miles of line may be laid during the financial year."

The Suez Canal Company.

The London *Times* says: "The report of the Suez Canal Company, to be presented at the annual meeting next week, states that the transit receipts in 1895 were 78,426,000 francs, or 4,299,000 francs above those of 1894. The year's net increase was 3,172,000 francs. The directors propose a dividend of 74½ francs, or, with interest, 92½ francs net, assign 3 per cent. to the reserve fund, and increase the annual allotment for renovation. The year's traffic comprised 3,434 ships of 8,448,383 tons, with 216,938 passengers. The average duration of the transits was 16 hours 18 minutes, being a reduction of 23 minutes. Of the ships 2,318 were British, 314 German, 278 French, 192 Dutch, 78 Italian, 72 Austrian, 57 Norwegian, 39 Russian, 36 Turkish, 33 Spanish, 5 American, 3 Portuguese, 2 Chinese, 2 Egyptian, 2 Japanese, 2 Swedish, and 1 Danish. Of the military passengers 47,166 were French, 29,837 British, 14,618 Turkish, 10,675 Italian, 8,860 Russian, 3,194 Dutch, 1,794 Spanish, 1,334 German, 1,096 Portuguese, 35 Austrian, and 26 Chinese. There were 74,878 civilian passengers, and 23,421 pilgrims and emigrants."

International Miners' Congress.

At the recent International Miners' Congress at Aix-la-Chapelle, Mr. Burt, M.P., was appointed president, and opened the congress by remarking that from such gatherings the English had acquired fuller knowledge of continental manners. This had increased the feeling of brotherhood, and it was impossible to weigh such benefits. In the afternoon an eight hours' resolution was moved. Mr. Young, for the Durham miners, moved an amendment that a reduction in hours would best be obtained by trade union organization. He insisted that the working classes were best off where least faith had been placed in the state. The congress adopted the eight hours' resolution. Delegates representing 960,000 men voted for and only the representatives of the 126,000 Northumberland and Durham miners against it. A resolution was carried proposing that women be prohibited from working in and about mines, and a discussion was begun upon the necessity of fixing a minimum living wage, and of establishing conciliation boards. A resolution in favor of a minimum wage was carried, the Northumberland delegates voting against it, and the Durham delegates abstaining. A resolution was agreed to demanding the prohibition of all overtime directly or indirectly tending to increase production.

Chinese Trade Prosperous.

The London *Westminster Gazette* says: "According to the report of the Imperial Maritime Customs on the trade of China, neither the war with Japan nor the riots and disturbances in certain provinces seriously interfered with trade, which was active and prosperous during the year. The right to import machinery, conceded by the treaty of peace, gave an extraordinary impetus to industries, especially cotton spinning and weaving, in which Chinese and foreigners have now invested much capital. 'Cheap labor and raw material are abundant, and with the continuance of the advantage which the East enjoys by the fall in the gold price of silver, there is every prospect of China becoming a most important manufacturing country, which will lead to a keen and formidable competition in textiles between the east and west.' The gross customs revenue last year was 21,385,000 taels (the tael fluctuating between 2s. 8½d. and 3s. 0⅞d.), or 1,138,000 taels less than in the previous year. This was due to the port of Niu-chwang yielding no revenue during the Japanese occupation, and the cessation of the revenue from the two treaty ports of Formosa on the cession of that island to Japan. Making due allowance for these, the revenue exceeded that of any previous year and shows a great expansion in the trade of the empire. The imports in 1895 amounted to approximately 17,500,000 taels, against 162,000,000 taels in 1894, while the exports reached a total of 143,250,000 taels, as compared with 128,000,000 taels in 1894. The latter increase is, however, partly due to coast traffic being entered as foreign, but there is a positive gain of over 9,000,000 taels by increased exports of silk, tea, cotton and other staples. Silk is now the chief export since tea receded to a subordinate position."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

There is little or no effort to push business at a period of so much uncertainty as to the precise terms of the financial planks to be adopted by the great political parties in national convention. The general merchandise movement continues as dull and conservative as heretofore, retailers, with few exceptions, buying only for immediate necessities. Mercantile collections continue slow and unsatisfactory, and there is no gain in the cotton, woolen goods, iron or steel industries.

Western speculators are buying wool above a parity with prices offered from the east. There is little likelihood of higher prices for wool while so much machinery is idle. Nearly all branches of dry goods are somewhat depressed. Cotton goods are below a parity with raw material. The contest continues between pools in iron and steel and consumers. Pool prices for billets are maintained, but brokers are offering steel $1.50 under pool prices. Pig iron production declined about 31,000 tons during May, stocks increasing less than 17,000 tons.

General trade in central western states remains quiet. No improvement is reported from Chicago as compared with unsatisfactory records of recent weeks. Improvement in demand for staples at St. Louis is among dealers in paints and drugs. Kansas City and Omaha report relatively the best demand among western jobbing centers, notably among wholesalers of dry goods, shoes and hats, and agricultural implements. Reports from southern distributing centers announce an almost uniformly quiet trade, although good rains in territory tributary to Charleston and to New Orleans have improved the crop outlook and wholesale trade. In Texas corn is suffering for want of rain.

Almost all leading lines at St. Paul report business dull, with the exception of jobbers in hardware. Minneapolis announces a fairly satisfactory business.

There is more activity in general lines at San Francisco, and further inquiry as to new-crop wheat. At Portland dealers announce that wool is moving, but offers are low. Successful efforts have been made to locate additional manufacturing interests at Tacoma. There is a fair trade in groceries and provisions at Seattle, and crop reports in that region are favorable.

Gross railroad earnings in May were better than expected, in view of dull trade and decreased bank clearings. Earnings show a gain over May a year ago, whereas clearings show a heavy decrease. Bank clearings reflect business done in part in preceding weeks or months, whereas railroad earnings indicate spot business. Total earnings of 120 railroads, with 93,000 miles of track, aggregated $36,777,000 in May, a gain over May a year ago of 2.4 per cent., following a gain in May a year ago over May, 1894, of 6.5 per cent. The grangers and Pacific roads did relatively best last month, with 8.8 and 8.2 per cent. gains, respectively. Southwestern roads did poorest, with a decrease of 9.8 per cent. Trunk lines showed small gains. Of the 120 roads reported, 63 showed gains and 49 losses. For five months total earnings of 119 roads show a gain of 7 per cent., following a gain in May, 1895, over May, 1894, of 2.5 per cent.

The total volume of bank clearings in the United States for six business days ending with June 11, based on official returns telegraphed to BRADSTREET'S, is $938,000,000, or 3.1 per cent. less than last week, 6 5 per cent. less than in the corresponding week of 1895, but 12.6 per cent. more than in the second week of June, 1894. The week's decrease, as compared with the corresponding period in 1893, is 9.1 per cent., and as compared with the like total in 1892, the falling off this week is 17.6 per cent.

The New York stock market is steady in tone, but is waiting anxiously for the decision of the St. Louis convention on the currency. Prices, however, have recovered from a sharp depression, caused by unfounded rumors of a presidential message on Cuba. Reports that a gold-standard platform might be expected at St. Louis stimulated a little foreign buying. The adjournment of Congress and the favorable crop report have also tended to sustain the market, which is narrow and professional and a waiting one. Gold exports for the week are $2,400,000, of which $2,200,000 goes out to-day. Exchange has been steady at 4.88½ for demand sterling.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,922,000 bushels, against 3,209,000 bushels last week, 1,781,000 bushels in the week one year ago, 2,254,000 bushels in the week two years ago, and 3,834,000 bushels three years ago.

So far as the movement of prices is concerned, the contrast with last week lies in advances for wheat-flour, lard, sugar, petroleum and tobacco. Decreases in recent weeks are followed by still lower prices for wheat, Indian corn, oats, pork, cotton and print cloths. Practically unchanged quotations are announced for leather, lumber, live stock and coffee. Wool, which is not firm, is nominally unchanged.

The total number of business failures throughout the United States this week is 234, compared with 236 last week, 232 in the second week of June, 1895, 227 in the corresponding week of 1894, and as contrasted with 303 in the like week of 1893, from which it will be seen that business failures during the past two or three weeks have declined to the average at a corresponding period in three preceding years.

In the Province of Quebec the crop outlook is fair, but the volume of business generally, particularly at Montreal, continues restricted, orders being most noticeable in dry goods, hardware and paints. Trade at Toronto is quiet, and the outlook does not favor a revival of business until after the elections. Mercantile collections are slow, and wheat is at about the lowest price of the season. The volume of business is light at Halifax and collections are unsatisfactory, but the weather is favorable to crops. There is an average volume of trade reported from St. John, N. B., where heavy shipments of fresh fish have been made to the United States. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $20,972,000 this week, compared with $21,994,000 last week, with $22,662,000 in the week one year ago, and as compared with $18,435,000 in the like week of 1894. There are 38 business failures reported from the Dominion of Canada this week, compared with 29 last week, 21 in the week a year ago, and 30 in the week two years and in the week three years ago.

FINANCIAL.

The Money Market.

The stagnant condition of both business and speculation is reflected in the New York loan market. Even the call issued by the Treasury for the payment by the special depository banks of the balance of the money in their hands derived from the recent bond sale has no effect. The amount involved is about $4,500,000. Lacking, as it does, any decided demand, the market continues to be oversupplied with funds, and any conservatism on the part of certain lenders is without influence. Offerings of commercial paper are slightly better, but the supply is not large, and transactions are made on the basis of 4@4¼ per cent. for best names and doubles. Time money is freely offered and in limited demand at 2½@3 per cent. for short and 3@4 per cent. for long periods. Call money has been 1½@2 per cent., with a little firmer tone on Friday, when quotations up to 3½ were made on the Stock Exchange.

The New York Banks.

The bank statement issued last Saturday is not marked by any special features. There was a large decrease in cash holdings, principally in legal tenders, which was mainly the result of the transfers of funds from the special deposit banks to the Treasury. The item of loans shows an increase of $1,662,700, and deposits decrease $1,694,000. As a result of the other changes the surplus reserve decreases $3,744,375. The figures of the statement compare as follows with those of the preceding week:

	May 29, '96.	June 6, '96.	Changes.	
Loans	$475,156,400	$476,819,100	Inc.	$1,662,700
Specie	62,456,000	61,808,500	Dec.	647,500
Legal tenders	84,493,200	80,972,800	Dec.	3,520,400
Deposits	498,874,100	497,180,000	Dec.	1,694,100
Circulation	14,605,100	14,725,300	Inc.	120,200
Total reserve	146,949,200	142,781,300	Dec.	4,167,900
Reserve required	124,718,525	124,295,000	Dec.	423,525
Surplus reserve	22,230,675	18,486,300	Dec.	3,744,375

At the corresponding date last year the surplus reserve was $39,667,900, against $76,918,250 in 1894.

The Boston Banks.

	June 6, '96.	May 29, '96.	Changes.	
Loans	$162,927,000	$161,004,000	Inc	$1,923,000
Circulation	9,870,000	9,848,000	Inc.	22,000
Deposits	101,395,000	101,659,000	Dec.	264,000
Due from reserve agts	19,971,000	21,338,000	Dec.	1,167,000
Legal tenders	6,087,000	6,254,000	Dec.	167,000
Specie	8,459,000	8,574,000	Dec.	115,000
Surplus reserve	798,571	1,419,057	Dec.	620,486

Foreign Exchange.

The exchange market, like other departments of Wall street, has been affected by the tendency in the business world to await political developments as bearing upon the currency. Inquiry has been restricted, and the fact that the supply of commercial bills is small has little effect. The oversubscription for a block of Milwaukee street railroad bonds, offered by the Messrs. Morgan in London, was not a factor, as no bills seem to have been drawn in consequence of the transaction. It was different, however, with the sale of a further block of Anaconda copper shares to the Rothschild syndicate. The purchase in this case amounts to between $7,000,000 and $8,000,000, and the bankers who acted as intermediaries have offered exchange

during the week in amounts sufficient to supply the demand. The actual rate for bankers, sight sterling has, consequently, varied but little from 4.88½, the utmost difference being to the extent of a commission off the price in question. Francs were somewhat firmer than sterling, but still the situation has involved a check to gold shipments. On Monday last, however, $100,000 was taken from the Treasury, followed by $100,000 more on Wednesday, for export, and rumors were circulated that some heavy withdrawals would be made for Saturday's steamer to Germany. These intimations were verified on Friday, when $2,200,000 was engaged for shipment to-day, of which $1,250,000 goes to Paris and the balance to Germany. The exchange market was also firmer at 4.88½ @4.88¾ for sight, and posted rates were advanced ½c.—to 4.88½ @4.89½.

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¼	4.87¼	4.87¼	4.87¼	4.87¼	4.87¼
@	@	@	@	@	@
4.87½	4.87¼	4.87½	4.87½	4.87½	4.87½

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾ @4.89; commercial bills, 4.87; francs, 5.16¼ @5.15; reichsmarks, 95¼ @95 11/16.

The Bank of England discount rate is unchanged at 2 per cent. The bank this week gained £507,000 in specie, and its proportion of reserve rose from 59.36 per cent. to 59.61 per cent. In the London open market call money is easier at ¼@½ per cent. and discounts at 11/16 per cent. The Berlin market is also a trifle lower at 2¾ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending June 5, 1896:

	1896.	1895.
Dry goods	$1,249,014	$1,951,050
General merchandise	8,158,047	9,067,373
Totals for the week	$9,407,061	$11,018,423
Previously reported	211,648,969	221,438,184
Since January 1	$221,056,030	$232,456,607

The exports (exclusive of specie) from New York to foreign ports for the week ending June 9 were $1,254,455 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,421,017	$7,778,182
Previously reported	164,269,734	148,269,317
Since January 1	$171,690,751	$156,057,499

Silver.

The silver market has been steady and lacked the speculative features which influenced its course last week. Prices, however, were comparatively steady, the only change in the London quotations for bars being a decline of 1/16d. on Monday—to 31 5/16—which figure has since then remained stationary. Commercial quotations in New York exhibited a similar slight decline to 68¾ @69¼. Dealings in silver bullion certificates on the New York Stock Exchange continued, but on a smaller scale. The total transactions for the week were 349,000 ounces, at 68⅞ @69c. per ounce. The amount of silver bullion on deposit with the Mercantile Deposit Company of this city against which certificates are outstanding is 563,000 ounces, an increase for the week of 401,000 ounces.

THE STOCK MARKETS.

The New York Stock Market.

The attention of the stock market for the past week has been fixed on the St. Louis convention and the chances for the adoption of a platform declaring in favor of a gold currency standard. Up to Wednesday speculation was almost at a standstill, and prices sagged wearily on the absence of buying support rather than on liquidation or bear selling. On the day in question, however, considerable more activity appeared, though at the expense of values. The downward movement bore the appearance of a bear raid, for which the preceding weakening of small accounts and the continued strain of anxiety about the currency plank had prepared the market. An unfounded rumor that a message from the executive on Cuban affairs would be sent to Congress was the ostensible cause for the selling, which was vigorously conducted, and which in a short time made quite an impression upon prices, considerable liquidation having resulted. On Thursday, however, a much firmer tone asserted itself, due in the main to dispatches from St. Louis indicating that prospects for the adoption of a satisfactory sound-money platform there were improving, while the adjournment of Congress was also regarded as a favorable event. The crop statement, showing unexpectedly favorable conditions in regard to the wheat yield, also benefited the granger stocks, and short covering throughout the list resulted in a general strengthening of prices. The "street," furthermore, was impressed by the views which Mr. J. P. Morgan was quoted as expressing on his return from abroad, indicating that the adoption of an adequate declaration in favor of maintaining the standard of value by the coming political convention would bring in immediate investments of foreign capital in this country. This, it was thought, could not fail to impress the minds of the politicians, though the week ends with continued uncertainty about the results in connection with the currency at St. Louis. London, however, was a considerable buyer of stocks in this market on Friday, being influenced, doubtless, by the reports that the possibility that a gold standard declaration would win. Apart from this, the foreign element have been of little importance in the market. Gold shipments were kept down during the early part of the week to $200,000 by the offering of some amounts of bills drawn in connection with a sale in the Anaconda mine to a foreign syndicate. On Friday, however, it was announced that $2,200,000 more would be shipped to-day.

Apart from the break on Wednesday, which was particularly marked in Distillers, Sugar and Missouri Pacific, there were few features of interest in the week's trading. Tennessee Coal was pressed for sale and touched 20¼, the condition of the iron industry being the cause. Sugar has been irregular, the declaration of the regular dividends without any extra division of profits having little effect, though a reduction in the price of the refined product at the close of the week caused some depression in it. The coal stocks are not active, in spite of a promised advance in anthracite prices on or before July 1. Manhattan is affected by objections on the part of the municipal authorities to its extension plans. On Friday the whole market rallied slightly on the foreign purchases referred to above, and closed firm.

Boston Stock Market.

The market has shown a fair amount of activity, with the close slightly easier. Atchison has declined ¼, while Chicago, Burlington & Quincy is off ½. New York, New Haven & Hartford rules easier, with a decline in price of 3⅞ points, while West End Railroad has declined 2 points. Coppers have been attractive, Boston & Montana selling well, with the close 1⅝ points lower. Sugar has ruled stronger on an active market and ¾ point advance, compared with last week. United States Leather has ruled dull and closes easier.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending—*Price June* 11, 1896.	*Price June* 4, 1896.	*Sales June* 11, 1896.	*Sales June* 4, 1896.

GENERAL TRADE QUIET.

NO IMPROVEMENT IN LEADING INDUSTRIES.

RELATIVELY MOST ACTIVE DEMAND AT THE NORTHWEST.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, June 12.—The general tone of business continues dull, with operations very conservative. Demand for merchandise is flat, with buyers meeting only necessities. The money market, however, shows a firmer tone. For four months' notes 4@4½ per cent. is quoted, while mercantile paper has been advanced to 4½ @5½ per cent. The range on call money closes at 3@4½ per cent. The boot and shoe market is steady, manufacturers having a fair volume of orders booked ahead. Iron and metals are in slow demand. The pools in structural steel and other material tends to keep values steady, but do not bring in trade.

Providence, June 12.—There is no improvement to note in general business, wholesale dealers and manufacturers alike finding trade dull.

Philadelphia, June 12.—Trade continues dull in most lines. Wool is at a standstill, and very little is doing in dry goods. Morocco manufacturers complain of small business and low prices, with poor collections. Lumber is quiet and prices are low; some dealers are ordering stocks on the belief that bottom has been reached. Receipts both by water and rail are heavier than in the corresponding month of last year, which points to laying up stocks, anticipating a rise. Tobacco dull. Havana is steadily advancing in price, and there is considerable trading in it. Iron drags along in a quiet and inactive way, and prices are weak.

Pittsburgh, June 12.—There is little change in trade and no improvement in prices. There has been some cutting in the prices of canned goods. The volume of business done is satisfactory. Country merchants continue to buy in good-sized quantities. Collections have improved somewhat, but are not up to the standard. The principal feature in the iron market is the small amount of business done. Prices have not changed materially, but there is a lack of buyers.

Buffalo, June 12.—Trade in general is slow and unsatisfactory. Jobbers report orders of "filling-in class." Retail trade continues about the same as last year. Money is easy and the demand is light. Lake freights are off on coal and grain, and iron ore and cargoes are scarce. Many complain of collections being very slow.

Baltimore, June 12.—Business for the week continues dull. Merchants complain of collections being quite slow. Dry goods business is now over, and, from what we can learn, the business for last fall and spring has been larger than it has been for years, and indications point to an equally large business the coming fall.

West and Northwest.

Cleveland, June 12.—Except in prominent staple lines, jobbing trade is inactive and without new features. The iron and steel markets are quiet.

Cincinnati, June 12.—Inactivity continues to prevail.

Detroit, June 12.—General trade continues fair in volume. Collections have, however, not been so satisfactory for the past week, being classed slow and unsatisfactory.

Chicago, June 12.—There is a fair business in dry goods, clothing and shoes, but sales show no increase, and the general character of the trade remains the same as for several weeks. Tanners report a reduction in the orders, but are holding prices steadily, as hides remain firm. Orders for bar iron, although small, are fairly numerous and are good for the season. Prices on wire nails have been reaffirmed, and no changes are looked for in other iron articles for the present. Light hardware is moving well for the season, but pig iron and steel is dull. Buyers demand concessions, but sellers refuse to grant them. Building brick has declined, but lumber shows no change, although the feeling on white and yellow pine is easy. Butter, eggs, potatoes and fruits are lower, with increased offerings. Wool receipts, 1,588,034 pounds.

Louisville, June 12.—Trade in general merchandise remains inactive. A few jobbers report sales in excess of same time last year. Leaf tobacco is firmer, with large sales and receipts. Collections are fairly satisfactory.

St. Louis, June 12.—The movement of general merchandise is slow, exceptions being staples and a strong local demand for reconstruction materials. The Republican National Convention is already responsible for the presence of a large number of visitors, including many merchants, who, however, are not devoting much time to business. Retail trade in some lines is livelier. Despite this being the presidential year, a number of leading merchants look for a reasonably good fall trade. Inquiries are more numerous for paints and colors. Drugs are showing renewed life. Pig iron is moving slowly and concessions are learned of. Iron and steel are unchanged, with a downward tendency of values. Hide receipts are light. Leather continues firm, and manufacturers of boots and shoes and harness begin to realize that prices will not be lower.

Kansas City, June 12.—Dry goods, boot and shoe and hat and cap houses are booking good orders for fall shipment. Hardware and implement houses report many sales, but low values. Drugs and notions are in fair demand. Collections are a little slow. Prices on live stock show some advance.

Milwaukee, June 12.—The volume of business is only moderate, and retail trade continues quiet in consequence of the recent local disturbance. Collections are slow.

St. Paul, June 12.—Trade continues dull in all lines except hardware, as is expected at this season of the year, but salesmen are booking orders for later shipment, which, it is thought, will bring trade for the coming season fully up to a year ago. Collections show some improvement.

Minneapolis, June 12.—Trade conditions practically unchanged from last week, but jobbers report a satisfactory season's business up to this time.

Omaha, June 12.—In all lines of trade there is some improvement. Collections are slow.

Southern Cities.

Charleston, June 12.—There is no change in general trade. There is a brighter feeling for the future trade here, owing to good rains and crop outlook.

Savannah, June 12.—There is a fair trade for the week, with fair collections. Receipts and shipments of rosin and turpentine are not quite as heavy as last week. Stock has increased and demand is good. Both markets are firm.

Atlanta, June 12.—There is no material change. Trade is quiet.

Augusta, June 12.—No change is noted since last week. All lines are quiet. Collections are not satisfactory.

Jacksonville, June 12.—Trade is about the same, with poor collections. Vegetables are moving at last.

Birmingham, June 12.—No improvement is noted in trade.

Chattanooga, June 12.—Business has not improved during the week. Hardware is quiet. Owing to rains, lumber men are counting on further supplies from the booms up the river.

Nashville, June 12.—Business has not opened up with life. Orders from the country are backward and for small amounts.

Memphis, June 12.—General trade is very quiet

except in groceries, which show a slight improvement. Collections are fair.

New Orleans, June 12.—Trade is only fair, but the tone is healthier. Some activity is noted in cotton and sugar. General rains have benefited all growing crops. Demands for loan good for the season; funds ample.

Galveston, June 12.—Trade remains dull and without special feature. Cotton-crop prospects continue very favorable, though rain is needed. Corn is suffering severely from drouth.

Pacific Coast.

San Francisco, June 12.—More activity is reported in general merchandise. Fruits are plentiful and prices firm. Produce is dull. Wheat freights are firm for present shipment, and considerable inquiry for new crop. Collections are slow.

Portland, June 12.—Trade conditions, embracing both wholesale and retail lines, are quiet. Eastern Oregon wool has begun to move, with buyers making low offers. Country collections are fair, while city are rather slow.

Tacoma, June 12.—Authorities are expecting much larger wheat exports the coming season, because of low charters, large yield, and benefits of the local system of inspection. Commercial lines continue dull. New manufacturing interests are talked of, with good prospect for some of them materializing.

Seattle, June 12.—Grocery, provisions and commission trade good; hardware fair. Alaska shipments are again increasing. Crop reports continue excellent.

Canada.

Toronto, June 12.—Trade is very quiet, with the outlook not very promising until after the elections. Collections are slow. Wheat is lower—at about lowest of the season.

Montreal, June 12.—Dry goods travelers are nearly all at home preparing fall samples, those still out sending in fair orders. Groceries are dull; hardware and paints fairly active. The volume of business is somewhat restricted, and no activity is expected until the elections are over. Rains have been plentiful; hay promises well, and crops show good promise. Railway earnings show an increase over the same week last year.

Halifax, June 12.—The movement in general merchandise is light, and collections are hardly satisfactory. The weather continues favorable to the agricultural interest. The provision market is easy, and mackerel are still plentiful. Icebergs have caused much damage to vessels entering the port of St. John's, N. F. St. John, N. B., reports an average amount of trade and a heavy shipment of fresh fish to the United States market.

Dry Goods.

Business continues quiet, with conditions not materially different. The call for supplies is small, and in nearly all departments depression is felt. Cotton fabrics are dull and values are weak, there being too many made-up goods on hand to give buyers any confidence. The mills have kept up production to such a point that they are forced to sell the goods at the best prices they can get. Raw cotton has declined considerably, but this does not affect the goods market, as the latter are now selling below the parity of the cost of raw material. Printed fabrics are quiet, and there is a disposition to clean up odd lots at low prices. Lancaster and Amoskeag ginghams have been reduced in price to job at 4¾c. Dress woolens are dull, and few fall orders are being taken by the mills. Men's-wear woolens continue dull. Spring samples are being prepared, but there is little encouragement to show them as yet.

Wool.

The market continues slow, with values for most kinds nominal in the absence of trade. Manufacturers are not disposed to buy to stock up except at liberal concessions from the present low prices, while their necessities for present use foots up but small. Western speculators are buying up considerable wool in the territories at better prices than eastern dealers will pay, hence the latter can see no object in cutting prices any more to clean out old wools when the cost to replace with new wools would be greater. The feeling is that, until the woolen goods market improves and permits idle machinery to start up, there is little prospect of any marked increase in the demand for wool.

THE LIGHT OF THE FUTURE.

The Philadelphia *Ledger* says: "Two prominent inventors, Edison and Tesla, and one who has begun to make a name for himself, Mr. D. MacFarlan Moore, have announced with an unusual degree of confidence that the present incandescent electric light must give way soon to the 'light of the future,' or vacuum tube lighting. Each has made experiments which seem to show that the cost of lighting can be greatly reduced, and each is now working to make his invention commercially practicable. Mr. Moore and Mr. Tesla appear to be following the same general line; Mr. Edison coats his bulb with a fluorescent substance. The purpose of all three is to produce a 'cold' light, or one which does not waste energy in heat. Mr. Moore has given a public demonstration of his ability to light a public hall, and the indications are that a fair degree of economy was attained for a first experiment. Mr. Moore uses glass tubes 7½ feet long and 1¾ inches in diameter, which can be disposed along the cornice of a room so as to give a well diffused, though not brilliant, light. The effect is rather that of moonlight than of daylight. Mr. Tesla aims to make a much brighter light, but has not shown his invention; he has, however, exhibited photographs taken with the light, which, judging by the time of exposure, closely resembles sunlight in its actinic properties. In vacuum tube lighting there is no filament; the light is produced by rapid vibrations of the ether. The bulbs are, in fact, substantially the same as Crookes' tubes. Mr. Tesla has been aiming to make exceedingly rapid vibrations, but little is known of the devices he uses for this purpose. Mr. Moore has invented a comparatively simple apparatus, which is the key to his system; he has put an ordinary form of vibrator in a vacuum tube, where it is almost infinitely more efficient than in air. Mr. Edison's invention follows his investigation of X rays. He appears to use the X rays themselves to render luminous the interior of a Crookes tube lined with a fluorescent substance more efficient than the tungstate of calcium.

"Mr. Edison gives measurements of the energy required for a one-candle-power lamp, which indicate that sixteen-candle-power lamps could be operated with one-fifth the energy required for sixteen candle power incandescent lamps. But he has not yet made lamps of higher efficiency than three or four candle power, and the problem still remains of devising suitable current producing apparatus. At present costly, delicate and more or less uncertain induction coils are used; they are efficient enough in laboratory practice, but could not serve as the basis of a commercial system. The inventor who can find a means of using generators now installed, with his system of vacuum tube lighting, and can simplify and cheapen the induction apparatus required, will have a great advantage over his rivals. At present the outlook is hopeful, though it is safe to predict that years will elapse before the new lamps displace the old. There seems to be no doubt that the light can be produced, and no doubt either that it gives promise of being economical. With the goal in sight and an assurance of a great reward for the inventor who first reaches it, all the resources of the laboratories of Edison, Tesla and Moore will be devoted to a solution of the commercial problem, and, if it is possible to solve it, we may be tolerably sure that success will crown their efforts. They all know what is needed; the main problem before them, that of producing a suitable current, is purely electrical, and so much is known of the laws of electrical induction that they ought to be able to make the required apparatus. The experiments are all being conducted in the domain of what has been called the 'fourth state of matter,' and important discoveries are likely to accompany the development of the new light."

AMERICAN ENTERPRISE IN JAPAN.

The *Engineering and Mining Journal* says: "We gather from a report made by the British consular service on the railways of Japan that there is a likelihood of the American manufacturers of railway material ousting, partially at least, their English competitors at no distant date. At first the English had a monopoly both in construction and management, but the Japanese have gradually learned the art of building and managing railroads, and at the present time there are hardly any foreigners in the service. In a short time there will not be a single foreign designer, and the Japanese will place all their orders for material without consulting foreign advisers. Of course, while Englishmen were at the head of affairs the orders went to England, but in future, contracts and orders will be given to those who can most promptly and cheaply supply the material required.

"In Great Britain, when a piece of engineering work such as bridge construction is taken in hand, the engineer orders material to be made to his own design. In America, on the other hand, the engineer or the company first state their requirements and the manufacturers send in competitive projects based on their own designs. It happens that the English engineer who has been the designer of railway bridges in Japan since 1882 has just given up his post, and the work will be in the hands of the Japanese in future. A good many of the Japanese engineers have been educated in the United States, and they will not be slow in taking advantage of the American system, as it will save them a great deal of trouble. At the present time all the leading American manufacturers of constructional iron work are represented personally in Japan, while their English rivals have no representatives on the spot.

"The above-mentioned report gives full information about the railroad business in Japan and the requirements of the country, and it should be in the hands of every American who wishes to increase his export trade."

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM MAY 30, 1896, TO JUNE 5, 1896, INCLUSIVE.

WONDERFUL THINGS THAT ARE NEAR.

The Philadelphia *Press* says: "Flying is solved. The principle is known. A mechanical expedient is all that is now needed to make it successful. Practical flight is to-day not more than five or ten years off. Commercial flight ought to come by 1925 or so.

"A glow-worm makes light with about one three-hundredth part of the force used in ordinary artificial light. When men know how to make light as cheap, streets and homes will be as light as day for a mere fraction of what light now costs. This is near. Vacuum illumination without incandescence is already in full operation, and in a year or two should cut down the price of light to a sixth of its current cost, and in five or ten years light in a city may be, like water, turned on in every house at will.

"Compressed air has long been known to be the best way, theoretically, to store force for use in transportation. There is no waste and no deterioration. The need is a cheap and efficient motor to apply compressed air to city transportation. If this can be done, first the trolley poles and wires will come down, next the horseless, air-compressed motor carriage will do all the work of city delivery.

"When these changes come the only use for gas will be for cooking—if this is not done by electricity. Factories, also, before many years, will be run by transmitted electric power. This has begun to be done and in five to ten years will be completed, and the factory fire and boiler will be a thing of the past.

"The city of the future, and no very distant future, will have no trolley poles or wires and no horses. All movements will be on rails by silent air-motors or by horseless carriages equally silent. All pavements will be asphalt. Unlimited light will be as cheap as unlimited water is to-day. No coal will be delivered at private houses and no ashes taken from them. With no horses, no coal and no ashes, street dust and dirt will be reduced to a minimum. With no factory fires and no kitchen or furnace fires, the air will be as pure in the city as in the country. Trees will have a chance. Houses will be warmed and lighted as easily and cheaply as they are now supplied with water.

"A city will be a pretty nice place to live in when the first twenty years of the twentieth century are passed."

ST. LOUIS' STEADY PROGRESS.

The Chicago *Journal* says: "Much has been written of the old rivalry between Chicago and St. Louis and of the ill-feeling cherished by each city toward the other. But there is another side to the story that it may be well to mention in this hour of our neighbor's trial. Chicagoans who have visited the Missouri metropolis of late years have all returned loud in its praises. On every side they have found evidences of substantial progress. The growth in population has been rapid and continuous. There has also been a great increase in business and trade of all descriptions, and accumulating riches have left lasting monuments of material prosperity in magnificent business blocks and public buildings.

"The management of railroad terminals in St. Louis is the admiration of the world. One grand station receives and cares for the tremendous traffic of thirty tracks. This splendid structure is a model of architectural beauty and convenience. It is without an equal of its kind in any other city, nor is there in any other city such a perfect and comprehensive system for the concentration of its entire railroad business.

"The electric street railway system also comes in for unstinted praise. It has an equipment far superior to anything that is known in Chicago. The cars are models, large, roomy and elegant, and every device is of the latest and most approved pattern.

"In traveling about the streets the visitor from Chicago is impressed first of all by their cleanliness. There is probably the same grumbling over the conduct of municipal affairs in St. Louis that there is in other American cities, but the Chicagoan is such a poignant sufferer from unswept streets that he hastens to assure the St. Louisan of his better fortune. In the matter of parks, however, we are far in the lead, but our old rival has taken care for the future, and a great tract of over 1,400 acres promises to develop into one of the finest of public pleasure grounds.

"St. Louis is adorned with magnificent new hotels, one of which is deservedly the boast of the town, which disdains comparisons on this score with Chicago. These hotels have been erected in response to the demands of the great jobbing trade, which extends to every corner of the south and southwest."

POWER FROM REFUSE.

A recent article in *Cassier's Magazine* says: "Garbage and town refuse disposal is one matter where the cities of Europe are far ahead of those of this country. An ideal plant of this kind is that at Rockdale, England. Investigators have all agreed that burning is the best way to dispose of the accumulations. This preference is due to the fact that by this method not only is all organic matter liable to putrify and become a menace to the health of the community destroyed, but it has been found by actual trial that the heat derived from the burning of this refuse may be used for the production of steam, which can be utilized for commercial purposes, and the revenue received from this source may be sufficient to more than pay for the cost of burning. There are no less than fifty-five such destructors in different parts of England. The health committee of Rockdale, a manufacturing town of 73,000 inhabitants, recently adopted the method, with the idea of ultimately using the steam produced for electric lighting purposes. It has been found that this rough, unscreened refuse, running as much as 35 per cent. of clinker and ash, will evaporate 1.6 pounds of water for every pound of refuse burned, under boilers built to produce steam at 120 pounds pressure. Coal burned under the same boilers evaporated 7 pounds of water per pound of coal. The two boilers have a grate surface of 45 square feet each. In building the two destructor cells a large combustion chamber, common to both, was provided between them and the boilers, so that the gases could intermingle, and that time should be allowed for the combustion of gases before they came in contact with the comparatively cold surface of the boiler, noting the fact that if once the organic matter in the fumes were heated sufficiently high no amount of subsequent cooling down could again make them malodorous.

"It is interesting to note that it is not necessary to use coal to aid in the burning of this refuse. The plant has been able to produce 340 brake horse-power, burning two tons of refuse per hour. This high efficiency is obtained with ordinary boilers by using a forced draught. The weight of the refuse is reduced two-thirds and the volume three-fourths.

"The author says in conclusion: 'The disposal of two-thirds of the refuse completely is an important matter, but when to this is added the fact that the remaining third is rendered quite free from any organic matter whatever, it is past conception that corporations and local companies will continue to tip such immense quantities of putrefactive matter away, when, if they put in suitable appliances and used the steam which can be produced, the refuse might be burned and a profit made on the transaction.'"

RELATIVE COST OF CROPS.

The Philadelphia *Record* says: "Any crop that leaves the soil in good condition will cost less than one which apparently pays better but which largely draws upon the soil for plant food. Ordinary wheat straw takes more fertility from the soil than potatoes, if compared by weight, because the potato is composed more largely of starch and water. The soil should not be considered as a source of food for plants, but rather as a location for growth, the food for the plants to be provided by the farmer according to the requirements of the crop. No crop pays that leaves the soil poorer, unless sold at a price which will enable the farmer to restore the plant food and also receive a fair profit for his time and labor. The soil is the storehouse of the farm on which is stored the raw materials for future crops, and the real wealth of a farm is in its soil, as it can be drawn upon in the future for crops that may be in demand. Whether a farmer receives a large return or fails altogether during any year, he has the soil as a savings bank, representing much of that which has been applied to it previously.

"Water is a staple article on farms, and is sold more extensively than anything else. Milk contains about 87 per cent. of water, and fruits of all kinds are considered more valuable if water predominates in their composition. Even a grain crop is not free from water, while grass and vegetables are mostly composed of water. Water is, therefore, the cheapest substance procured by the farmer (for he obtains more of it by good cultivation than would be the case otherwise), and next to water is carbon. When oil, butter, sugar and starch are produced on the farm the leaves of the trees and plants derive carbon (carbon-dioxide) from the air and store it in their cells. When the animals consume plants they convert this carbon into compounds familiar to all, but the cost of which so far as the fertility of the soil is concerned may be very small, and when the soil can be made to do service without loss, the gain is correspondingly as great to the farmer as from a sale.

"The real cost of crops on nearly all farms is that of labor; but labor is profitable, according to the uses to which it is applied, and the labor-saving implement must assist the laborer. If the farmer continues to grow crops for which he knows there will be low prices his labor will be more expensive than with some better crop. Just what that better crop may be depends upon the location of the farm, the markets, the soil and other conditions. There are seasons when some crops pay better than others, as was the case with peaches last year, which gave good results. An acre of onions may be more profitable than five or ten acres of wheat, and yet the cost of the onions may be less than that of the wheat proportionately. A diversity of crops should be the rule, for no farmer can afford to take the risk of depending upon a single crop. The cost will be according to the skill and judgment used by the farmer, and the estimate of profits must always include that which the soil has also gained."

THE BANK OF FRANCE.

The London *Economist* says: "It is announced officially that the negotiations between the government and the Bank of France for the renewal of the charter of that establishment have been reopened. A decision is now a matter of urgency, as the privilege expires at the end of next year. The question has been pending for more than five years. A convention was concluded between the state and the bank in 1890, to ratify which a bill was presented by M. Rouvier, Minister of Finance, in January, 1891. The bill came up for discussion in the Chamber, but caused such embarrassment to the government from the demands put forward by deputies to impose more onerous conditions on the bank, each concession made by the bank to reduce the period for the new privilege, and increase the share of profits to be paid to the state, while restricting the independence of the bank, being followed by further demands, that the government withdrew the bill under the pretext of leaving the matter to the new Parliament that was to be elected in 1893. Nearly three years have elapsed since the general elections, but until now the successive cabinets have evaded the question. Many deputies are in favor of making the bank a state establishment, or at least of conferring on the government the control of the note circulation. The present Minister of Finance, M. Cochery, may, however, be trusted to resist such a revolutionary measure. So far the bases of the present negotiations have not transpired."

All future interest of any of the bonds so designated ceases with the coupons due July 1, 1896, in accordance with the terms of the mortgage.

CENTRAL TRUST COMPANY OF NEW YORK, Trustee.

By E. F. HYDE, 2d Vice-President.

New York, May 15th, 1896.

We, the undersigned, hereby certify that the Three hundred and forty (340) Bonds were designated by lot in our presence as above stated.

GEORGE P. ROBBINS,
With Central Trust Co. of New-York.

JOHN SCOTT,
Of the Northern Pacific Railroad Company.

FRANK B. SMIDT,
Notary Public, New-York City and County.

TO THE HOLDERS OF

GENERAL FIRST MORTGAGE AND LAND GRANT BONDS

OF THE

NORTHERN PACIFIC RAILROAD COMPANY.

Holders of over a majority in amount of the above described bonds having deposited same for conversion, on the basis set forth on page 12 of the plan and agreement of reorganization dated March 16, 1896, all other holders of such bonds who desire to avail of the privilege of conversion on the above basis are hereby notified to deposit their bonds at either of our offices on or before June 30th, 1896.

Reorganization Certificates will be issued for bonds so deposited.

The basis of conversion is 135 per cent. in the new 4 per cent. Prior Lien Bonds of the reorganized Northern Pacific Railroad (on which interest from July 1st, 1896, shall be adjusted quarterly in cash), with 3 per cent. in cash payable now on the old bonds for the interest due July 1st, 1896.

On July 1st, 1896, the basis for conversion of bonds not previously deposited will be reduced from 135 per cent. to 132 per cent.

REORGANIZATION.

NEW YORK, PHILADELPHIA AND BERLIN, June 12, 1896.

Pursuant to the provisions of page 13 of the plan of reorganization, we hereby give notice that on and after June 23, 1896, we shall be prepared to pay in cash at either of our offices the following sums on bonds deposited under said plan, viz.:

4 % on General Second Mortgage Bonds,
3 % on General Third Mortgage Bonds,
3 % on Dividend Certificates,
1½ % on Consolidated Mortgage Bonds.

Holders of Reorganization Certificates or Receipts must present same at one of our offices, in order that a record of such payments may be stamped thereon.

TO THE HOLDERS OF
Reorganization Certificates or Receipts for Preferred and Common Stock
OF THE

Northern Pacific Railroad Co.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA AND BERLIN, June 5, 1896.

Pursuant to the provisions of said Plan and Agreement, notice is hereby given that the second instalment of

$3.00 per share in respect of Preferred Stock, and
$5.00 per share in respect of Common Stock,

on account of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on June 26, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates, or receipts, must be presented so that such payment may be endorsed thereon.

Oregon Improvement

REORGANIZATION.

NEW YORK, BOSTON, May 29th, 1896.

To Holders of Certificates of Deposit representing bonds or stock of the Oregon Improvement Company deposited with the MANHATTAN TRUST COMPANY, New York, or the OLD COLONY TRUST COMPANY, Boston, under a preliminary agreement dated October 8, 1895, between such holders and the undersigned Committee, and to

Holders of First Mortgage Bonds,
Consolidated Mortgage Bonds,
Preferred Stock, and
Common Stock
of the Oregon Improvement Company.

The undersigned, who were appointed a Committee for the purpose, have perfected a plan for the reorganization of the Oregon Improvement Company, which has been accepted by the holders of a large amount of all classes of bonds and stock.

Copies of said Plan may be obtained on application to the MANHATTAN TRUST COMPANY, No. 10 Wall Street, New York City, or the OLD COLONY TRUST COMPANY, Ames Building, Boston (with each of which Companies is lodged a duplicate Agreement of Reorganization), or will be mailed to any holder of bonds or stock sending his address to either of said Trust Companies.

This plan provides for the issue of the following new securities:

1. First mortgage 5% 50-year gold bonds. $5,000,000
2. Four per cent. non-cumulative preferred stock 5,000,000
3. Common stock 9,000,000

By the terms of the Plan,

First mortgage bondholders receive in cash an amount equal to the coupons on such bonds maturing June 1, 1896, to wit, $30 per bond, and 110 per cent. of the principal of such bonds in new five per cent. bonds, bearing interest from June 1, 1896.

The new first mortgage bonds not set aside for the present firsts are to be issued at no greater rate than the rate of $100,000 par value of bonds per annum, and only for the purchase of new steamships and other needed property, which is to be added to the security for such bonds.

FINANCIAL.

Holders of consolidated mortgage bonds who pay 12½ per cent. of the principal thereof, to wit, $125 per bond, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of the principal of such bonds in new preferred stock and 75 per cent. thereof in new common stock.

Holders of preferred stock who pay 12½ per cent. of the par thereof, to wit, $12.50 per share, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of par in new preferred stock and 75 per cent. of par in new common stock.

Holders of common stock who pay 10 per cent. of the par thereof, to wit, $10 per share, in four equal instalments, as provided in the Plan, receive 10 per cent. of par in new preferred stock and 50 per cent. of par in new common stock.

First mortgage bonds should be deposited, or if already deposited under said preliminary agreement of October 8, 1895, the certificates held therefor should be exchanged for reorganization receipts or certificates, at one of said Trust Companies, ON OR BEFORE JULY 1, 1896. On making such deposit or exchange the holders will receive in cash an amount equal to the interest coupons thereon maturing June 1, 1896, to wit, $30 per bond.

Consolidated mortgage bonds and preferred and common stock should be deposited, or if already deposited under said preliminary agreement, the certificates representing the same should be exchanged for reorganization receipts or certificates, at one of said Trust Companies on or before July 1, 1896.

JOHN I. WATERBURY, N. Y.,
T. JEFFERSON COOLIDGE., Jr., Boston,

JULES S. BACHE, New York,
} Committee.

SIMPSON, THACHER & BARNUM, Counsel,
10 Wall St., New York.

NEW YORK, BOSTON, June 3d, 1896.

TO THE HOLDERS OF

Oregon Improvement Company

FIRST MORTGAGE 6% BONDS.

The undersigned Committee, which was organized in February last for the exclusive protection of the First Mortgage Bonds under a Bondholders' protective agreement, recommend the deposit of bonds with the Reorganization Committee of which Mr. John I. Waterbury is Chairman, the terms offered being the result of conferences between the two Committees prior to the publication of the plan.

F. P. OLCOTT,
President of the Central Trust Co., New York.
GUSTAV E. KISSEL,
Of Kessler & Co., No. 54 Wall Street, New York.
MOSES WILLIAMS,
President of State Street Safe Deposit and Trust Co., Boston, and of the Third National Bank, Boston, Mass.

Spokane and Palouse.

NEW YORK, May 27th, 1896.

To the Bondholders of the
Spokane and Palouse Railroad Company and the Holders of New York Security and Trust Company Receipts therefor:

The undersigned Committee, after negotiation with the Northern Pacific Reorganization Managers, has arranged with the latter that, pursuant to the provisions of page 14 of the Plan of Reorganization of the Northern Pacific Railroad System, dated March 16, 1896, the bonds of the Spokane and Palouse Railroad Company may participate in such reorganization, receiving for each $1,000 present bond, with all unpaid coupons attached—

$525 in cash on January 1, 1897.
$525 in the new 3 per cent. General Lien Bonds bearing interest from January 1, 1897.
$250 in the new Preferred Stock Trust Certificates of the reorganized Northern Pacific Railroad.

The present agreement with the Northern Pacific Railroad Receivers (whereby they pay a sum equal to interest at 5 per cent. per annum on the face of the present bonds), to continue to January 1, 1897, inclusive, but not thereafter, such payment to be made on July 1, 1896, and January 1, 1897.

Holders of bonds of the Spokane and Palouse Railroad Company, or of New York Security and Trust Company receipts therefor, in order to participate in this arrangement, are notified to deposit their bonds or receipts with Messrs. J. P. Morgan & Co., New York, not later than June 15th, obtaining in exchange therefor suitable Reorganization Certificates to be issued by them, entitling their holders to al the benefits of said arrangement.

Bonds or receipts not so deposited may, at the discretion of the Reorganization Managers, be excluded from the benefits of this arrangement.

The undersigned Committee is unanimously of the opinion that prompt acceptance of the foregoing proposition is for the best interests of all bondholders or receipt holders.

GEORGE R. SHELDON,
EDWARD N. GIBBS,
R. B. DODSON,
EVANS R. DICK,
WILLIAM BLODGET,
} Committee.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

New York Building-Loan Banking Company,

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 20, 1896.

Interest will now be diverted from St. Louis, which has monopolized attention for a week or more, to Chicago, where the delegates to the National Democratic Convention will meet on July 7. Recent advices have seemed to make it probable that the free-coinage men will be able to control the convention, though perhaps not the nomination, unless the two-thirds rule should be abrogated. It seems clear, however, that after a period of depression, induced by the probable victory of the free-silver men, the sound-money men have during the last week or two recovered some degree of confidence, or, if not confidence, at least resolution to make an earnest struggle for the control of the convention. The victory of the gold men in some close states recently has contributed to this feeling of confidence, which has not been lessened by the success of the sound-money men in the St. Louis convention. There is now every prospect that the silver men will not be allowed to shape the action of the convention without a strong fight for mastery.

The most dramatic feature of the convention at St. Louis was the protest and retirement of the delegates from the silver states after the vote of the convention laying on the table Senator Teller's free coinage substitute for the plank reported by the committee. This bolt of the silver delegates was preceded by an impressive address by Senator Teller, who led the retiring delegates, and the reading of a formal protest by Senator Cannon, of Utah. Senator Teller's remarkable address was noteworthy for one statement, that in reference to the possibility of an international bimetallic agreement being adopted. He declared that there would be no bimetallic agreement with the great commercial nations of the world. Such an agreement, he declared, could not be obtained, particularly in view of the attitude and interest of Great Britain. The declaration on this subject he declared to be a platitude. Senator Teller sees some things very clearly, whatever may be the conclusion as to his view of the desirability of free coinage.

The special Senate Committee which was appointed to investigate the recent sales of government bonds has been conducting its inquiries at Washington and New York. After Secretary Carlisle's reply, referred to last week, was read, the committee asked him to appear before it, a request with which he complied on Monday. In answer to one question by the committee, namely, as to how he came to change his contract with the syndicate by releasing it from its obligation to purchase one-half of the gold for the payment of bonds abroad, the Secretary replied that the syndicate had the gold and did not have to buy it in this country. It was simply a question of requiring it to ship the gold to Europe and then return it. He wanted to stop shipments of gold of any kind to Europe, as each shipment caused uneasiness in financial and business circles. In response to another question, Mr. Carlisle said that the protective clause in the contract with the syndicate—that requiring it to do all in its power to protect the gold reserve during the operation of its contract—was made at his suggestion. In this issue no bids were called for, the negotiation for replenishing the gold reserve being made with the Morgan-Belmont syndicate alone. This course was adopted because the exigency was great, and there was no time to advertise. At that time the gold reserve was reduced to about $41,000,000.

At the sessions of the committee in New York, Messrs. Belmont and Morgan were examined regarding their connection with the bond issues. An effort was made to show that Mr. Belmont had gone to Washington with the preconceived idea of impressing upon Secretary Carlisle the necessity of selling bonds. This Mr. Belmont would not admit. Mr. J. P. Morgan was subsequently examined by the committee. He gave the committee a clear account of his connection with the bond issues, going over facts which have been made pretty well known during the interval which has elapsed since the first of the bond issues. He declined, however, to tell what profit his firm made out of the issues, or at what price the bonds were sold by himself and his associates to others. He said that he was perfectly willing to state to the committee everything that took place in regard to the bonds up to the time of their coming into the possession of the syndicate, but that what took place after they were paid for and delivered to him and his associates was their private business. He would say, however, that no member of the government and no official had any interest whatever in the bonds.

Step by step the gold standard is making its way everywhere, even among the less important nations commercially. An instance of this is found in the case of Venezuela, where, as is learned by advices from Washington, based on information received by Minister Andrade from Caracas, the constitutional amendment by which Venezuela adopts the gold standard has been ratified. This is the direction in which events are tending. The weaker nations, commercially, are beginning to see the importance of having their monetary systems in harmony with that of the more advanced nations.

If the suggestion of Secretary Olney should be agreed to the new rules of the road at sea will go into operation on July 1, 1897. It appears that the Secretary has communicated to the governments of other nations interested the fact of the rules having been modified in accordance with the suggestions of the British government. The assents of the principal maritime nations to the rules as originally framed were secured two years ago, and it was then supposed that they would go into force in March, 1895. The protests of British shipowners, however, led the government of the United Kingdom to ask for further delay until an opportunity for the revision of the rules should be afforded, and other maritime nations concurring, the point was carried, and, as the result, Congress adopted a number of amendments, which are to be promulgated by the President. The delay proposed by Secretary Olney in putting the rules in operation is for the purpose of allowing the governments interested an opportunity to inform their citizens engaged in navigation of the changes made in the rules.

It appears that negotiations in relation to arbitration between Great Britain and the United States have been for some time in progress. Secretary Olney has been acting on behalf of the United States, and Sir Julian Pauncefote, the British ambassador at Washington, on behalf of the Downing street government. Naturally enough, the diplomats are reticent about the state of the negotiations, and little or nothing can be learned from them. It may be conjectured, however, without the fear of wandering widely from the truth, that the negotiations concern the subject of international arbitration generally. This subject is one which is by no means free from difficulty, as will be appreciated by those who have followed the discussions in reference to the Venezuelan affair; but so much is to be gained by a favorable result of the negotiations that it may be expected that every effort will be made on both sides to make the negotiation a success.

As bearing on the question, some remarks made by Lord Salisbury to a deputation of members of the International Arbitration League, are of interest. He said that the government, like all sensible men, desired to arbitrate differences and disputes wherever it was possible. He was glad to say, he continued, that matters presented a great deal more hopeful aspect in the matter of the differences between Great Britain and the United States. His desire was that the principle of arbitration should be extended as far as was consistent with the just rights of those whose interests were committed to the charge of the government, and he believed that the same view prevailed in the United States. The various difficulties besetting the question had to be solved one by one, and the deputation must not be impatient if the discussion of these matters was conducted with deliberation and circumspection, in order that no mistakes should be made whereby the ultimate triumph of the principle might be jeoparded. Lord Salisbury, continuing, said he believed that it was the highest desire on both sides that every important issue arising between the two countries should be submitted to arbitration. He thought and also had every hope that the International Arbitration League would give the first instance to the world of the triumph of a principle tending to abolish war. The government must, however, be true to the trust they held, and protect the interests of which they were the trustees, at the same time earnestly aiming at the attainment in a civilized way of the adjustment of difficulties arising among great communities.

Touching the special question at issue in the Venezuelan controversy, the Under Secretary for Foreign Affairs, in answer to a question in the House of Commons yesterday, said that the British ambassador at Washington, Sir Julian Pauncefote, was authorized to receive and report on proposals made by the Venezuelan representative at Washington. The latter, he said, had been informed of this, but up to the present had not made any proposal, and negotiations were proceeding with the United States both in regard to a definitive frontier and the arbitration of the frontier question with Venezuela under proper conditions of discussion. The latter question, Mr. Curzon stated, did not offer obstacles to the conclusion of a general arrangement with respect to arbitration, which the government hoped to see concluded, and which, as the remarks of Lord Salisbury and the information gleaned from Washington sources appear to indicate, is progressing with favorable prospects.

THE OUTCOME OF THE ST. LOUIS CONVENTION.

The national convention of the Republican party has held its sessions at St. Louis, and the work of that convention already belongs to history. In part, the expected has happened, notably in the long foreshadowed nomination of ex-Governor McKinley, of Ohio, as the candidate of the party for the presidency. To some extent, however, the outcome of the convention's work has been different from what was anticipated, when the special advocates of Mr. McKinley's nomination seemed to be in unchecked control of the convention's deliberations. This is particularly true as regards the capital point of a monetary plank. It was thought that the convention might adopt something in the nature of a straddle, but the earnest opposition to this policy, led by ex-Senator Platt, of New York, and Senator Lodge, of Massachusetts, resulted in the adoption by the convention of a declaration in favor of the maintenance of the gold standard, and opposition to the free coinage of silver, except by international agreement with the leading commercial nations of the world.

The platform opens with the usual arraignment of the party in power. After this follows the plank devoted to the tariff, which emphasizes the allegiance of the party to the policy of protection as "the bulwark of American industrial independence and the foundation of American development and prosperity." The present tariff is denounced as "sectional, injurious to the public credit and destructive to business enterprise," and the platform demands such an equitable tariff on foreign imports which come into competition with American products as will not only furnish adequate revenue for the necessary expenses of the government, but will "protect American labor from degradation to the wage level of other lands." The party declares itself not to be pledged to any particular schedules, but asserts that the question of rates is a practical question to be governed by the conditions of the time and of production, and that the ruling and uncompromising principle is the protection and development of American labor and industry. Regarding the allied subject of reciprocity, the platform demands the renewal and extension of the arrangements negotiated by the last Republican administration on such terms as will equalize our trade with other nations, remove the restrictions which now obstruct the sale of American products in the ports of other countries, and secure enlarged markets for the products of our farms, forests and factories.

The platform condemns the present administration for not keeping faith with the sugar producers of the country, and declares that the Republican party favors "such protection as will lead to the production on American soil of all the sugar which the American people use." The most ample protection is promised to all the products of the country—"to those of the mine and the field as well as those of the shop and factory—to hemp, to wool, the product of the great industry of sheep husbandry, as well as to the finished woolens of the mill." The policy of "discriminating duties for the upbuilding of our merchant marine and the protection of our shipping in the foreign carrying trade" is favored to the end that American ships—the product of American labor employed in American shipyards, and manned, officered and owned by Americans—may regain the carrying of our foreign commerce.

The financial plank of the platform, the most important one of all, and the only one which led to any contest in the convention, is as follows:

> The Republican party is unreservedly for sound money. It caused the enactment of the law providing for the resumption of specie payments in 1879; since then every dollar has been as good as gold.
>
> We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are therefore opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such agreement can be obtained the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolably the obligations of the United States, and all our money, whether coin or paper, at the present standard of the most enlightened nations of the earth.

The declarations in the platform regarding the country's foreign relations are what may be termed vigorous. It is declared that the Hawaiian Islands should be controlled by the United States and no foreign power should be permitted to interfere with them; the Nicaragua Canal should be built, owned and operated by the United States, and by the purchase of the Danish Islands we should secure a proper and much needed naval station in the West Indies. The Monroe doctrine is reasserted in its full extent, and the right of the United States to give the doctrine effect by responding to the appeals of any American state for friendly intervention in case of European encroachment is affirmed. In regard to Cuba it is urged that the government of the United States should actively use its influence and good offices to restore peace and give independence to the island.

The continued enlargement of the navy is favored, and a complete system of harbor and seacoast defenses is advocated. For the protection of the quality of American citizenship and of the wages of workingmen "against the fatal competition of low-priced labor," it is urged that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write. The enforcement and extension of the civil service law is promised; the creation of a national board of arbitration to settle and adjust differences which may arise between employers and employed engaged in interstate commerce is favored, and the convention recommends an immediate return to the free homestead policy of the Republican party, and urges the passage by Congress of the Free Homestead measure which has already passed the House and is now pending in the Senate. The platform further declares in favor of the admission of the remaining territories at the earliest practicable date, having due regard to the interests of the people of the territories and of the United States; suggests that all the federal officers appointed for the territories should be selected from bona fide residents thereof, and that the right of self-government should be accorded as far as practicable, and urges that the citizens of Alaska should have representation in the Congress of the United States, to the end that needful legislation may be intelligently enacted.

As has been already intimated, the nomination of Mr. McKinley has long been regarded as a foregone conclusion. He has had valuable preparatory experience, both legislative and executive, to fit him for the office for which he is a candidate, having been for a long time a member of the House of Representatives, where his name became specially identified with tariff legislation, and having also filled the office of governor of Ohio. The candidate for the vice-presidency, Mr. Hobart, of New Jersey, in addition to having filled a number of local and state offices in his own commonwealth acceptably, has a high reputation as an active man of affairs beyond its borders. His nomination as Mr. McKinley's associate on the ticket seemed to be the one most prominently discussed both before and during the sessions of the convention.

FOREIGN TRADE STATISTICS FOR ELEVEN MONTHS.

Preliminary statistics of foreign trade for the month of May and the eleven months of the fiscal year ending therewith have just been issued by the Chief of the Bureau of Statistics of the Treasury Department. The figures, which are corrected to June 13, show that the exports for the month were valued at $66,525,169, which represents an increase of over $2,250,000 as compared with the corresponding month of last year. The imports were valued at $56,963,910, which represents a decrease of over $9,000,000 as compared with the corresponding month of last year. The non-dutiable imports for the month were valued at $24,795,200, a decrease of nearly $6,000,000 as compared with May, 1895, while the dutiable imports were valued at $32,168,710, a decrease of over $3,000,000 as compared with the corresponding month of last year. The month showed an excess of exports over imports amounting to $9,561,259, whereas in May of last year the imports showed an excess over the exports amounting to $1,761,675.

For the eleven months ending with May the exports were valued at $815,971,764, which represents an increase of over $63,400,000 as compared with the corresponding period of the preceding fiscal year. Of the total exports of merchandise $17,705,292 worth were classed as foreign, as compared with $12,915,829 in the corresponding eleven months of the preceding fiscal year. The imports for the eleven months were valued at $723,260,747, an increase of nearly $53,000,000 as compared with the corresponding period of the preceding fiscal year. The imports free of duty were valued at $344,630,792, an increase of over $12,100,000 as compared with the eleven months of the year preceding, while the dutiable imports were valued at $378,629,955, an increase of over $40,800,000 as compared with the corresponding period of the fiscal year 1894–95. For the eleven months ending with May the exports exceeded the imports in value by $92,711,017, as compared with an excess of exports amounting to $82,262,414 in the preceding eleven months' period.

The exports of gold coin and bullion for the month amounted to $19,103,913, as compared with $1,585,071 for the month of May, 1895. The imports for the month were valued at $610,204, as compared with imports valued at $4,856,264 in May last year. The exports of gold for the month showed an excess of $18,493,709 over the imports, whereas in May, 1895, the imports showed an excess of $3,271,193 over the exports. For the eleven months ending with May the exports of gold coin and bullion were valued at $105,394,070, an increase of over $39,000,000 as compared with the corresponding eleven months of the preceding fiscal year. The imports, on the other hand, were valued at $30,888,524, which represents a decrease of over $2,100,000 as compared with the corresponding period of the fiscal year ending in 1895. For both periods the exports showed an excess over the imports—an excess which amounted to $74,505,546 in eleven months of 1895–96, as compared with $32,948,199 in eleven months of 1894–95.

The exports of silver coin and bullion for the month were valued at $5,159,130, an increase of over $600,000 as compared with May, 1895. The imports were valued at $564,332, a decrease of over $191,000 as compared with May, 1895. For both months there was an excess of exports over imports amounting to $4,594,798 in May last, and to $3,798,786 in May, 1895. For the eleven months the exports of silver coin and bullion were valued at $55,515,178, an increase of over $12,300,000 as compared with the corresponding period of the preceding fiscal year. The imports for the eleven months were valued at $11,929,660, an increase of over $3,300,000 as compared with the corresponding period of the fiscal year 1894–95. The exports of silver for the eleven months showed an excess over the imports amounting to $43,585,518, as compared with an excess of $34,546,565 in the corresponding period of the preceding fiscal year. The imports of silver ore, on the other hand, showed an excess over the exports amounting to $13,657,856, the imports being valued at $14,241,202 and the exports at only $583,346. During the corresponding eleven months of 1894–95 the imports were valued at $9,582,747, while the exports were valued at only $32,767.

ANTHRACITE COAL CONDITIONS.

Since the presidents of the companies engaged in the mining and transportation of anthracite coal wisely concluded to regulate the output of that article, with some reference to the requirements of the market for it, there has apparently been a great improvement in the condition of the trade. It is true that there have been no steps taken calculated to attract public attention to the improved relations of the companies, the fear of doing or saying anything that would bring about interference by the law officers of the states in which the public is most directly interested having been apparently before the eyes of the combine. A foretaste of what they might encounter was given by the action of the New York legislature at its recent session, when the so-called anti-trust bill was passed, empowering the attorney-general to investigate organizations designed to advance the prices of commodities. This measure was avowedly aimed at the new coal combination, and there is a disposition to regard the absence of any open exercise of the powers it confers on the law department of the state to the prudent course followed by the anthracite companies, and their avoidance of any proceedings which would give opportunity for an assault under the provisions of the new law. In fact, the policy, which has been steadily pursued since the presidents held their famous meeting last winter and stopped the coal trade war, has been to carefully pursue a path which would not place them in open conflict with the legislature or the law or attract too much public notoriety. This is shown by the fact that the meetings of the coal sales agents have become mere perfunctory gatherings, and, it is indeed hinted, may be

altogether abandoned. At the same time circular prices have not been changed, and the monthly production and its allotment among the various competitors has undergone no formal alteration.

Judged by actual results, however, the new agreement has been a success, and, what is more, has been lived up to by all concerned. The accumulation of coal, which weighed so heavily upon the market, has been cleared away, removing the great inducement for the cutting of circular prices. All parties have adhered closely to their respective proportions of the monthly allotment of 3,000,000 tons, and prices, so far as can be learned, are held strictly to the figures of the circular. As a result of this, there is now a prospect of a reasonable increase in the production, with a slight, but, on the whole, beneficial, increase in prices. Some of the companies are even said to be short of certain sizes of coal, and are demanding and obtaining increased prices therefor. It is understood that, commencing with July, the total output of all the companies will be raised to 4,000.000 tons, and that an increase of 25c. per ton will be made. In some quarters the increase is put at a lower figure, say 15c. for domestic sizes, and the augmentation of the aggregate production at 500,000 tons, making it 3,500,000. It is also well understood that there will be no formal action on any increase of price by the sales agents, but that some of the companies will take the initiative and the others follow their lead in the matter. The whole anthracite trade situation has, in fact, changed for the better, and the companies have at last taken the only steps that could restore it to healthy condition without their action being attended by any of the evils to the public which were feared in some quarters.

AMERICAN BICYCLES IN GERMANY.

Activity in the bicycle trade is no longer confined to the United States, as shown by reports received from abroad concerning what may be called the spread of the bicycle habit. Partly because of American manufacturers seeking a remunerative market for surplus product, and partly because of the advertising given American bicycles throughout Europe by American tourists, there is a growing desire, apparently, to both see and ride American-built wheels. That American manufacturers are inclined to keep pace with this demand seems evident from the number of inquiries reported by the United States consuls abroad as to trade conditions in European markets. Consul-General Mason, of Frankfort, writing under date of April 21, says that a year ago the American-built bicycle was practically unknown in Germany, and until recently the use of bicycles of any kind was confined exclusively to men who either rode English-built wheels or those of German manufacture modeled after English types. During the summer of 1895 the presence of a number of American tourists of both sexes equipped with American bicycles advertised the American product in a most effective way at a number of German watering places. The lightness, gracefulness and easy-running qualities of the American wheels were a revelation to German observers accustomed to riding machines ranging from 30 to 40 pounds in weight. The high seats of the American women's bicycles, set well over the pedals, combined with the narrow tread and light, neatly-formed cranks and pedals, averted the laborious, ungraceful movements unavoidable to riders of machines of most European models, which had previously done much to prevent the general adoption of the wheel by German women. The winning of a professional race by an American, mounted on an ordinary road machine, the consul-general says, demonstrated that American bicycles embodied qualities not generally attained by those of European manufacture. Out of this conviction a demand has grown which indicates that with proper effort Germany may become a promising and profitable field for American bicycle makers. German bicycle riders are not dependent upon imported bicycles by any means. On the contrary, the manufacture of bicycles is as largely developed in Germany as in any country of Continental Europe. There are said to be in Germany twenty manufacturers turning out from 10,000 to 20,000 bicycles per annum, which would allow an average production of 300,000 wheels per year. These wheels sell in Germany at from $50 to $100 apiece, and are largely exported abroad.

The demand which may be hoped for from German riders is for machines of the highest grade, lighter and more perfect in construction and finish than any made in Germany. Already the best American models are being closely copied, and one Westphalian manufacturer is importing wooden wheel rims, single tube tires, and steel tubing for frames. He turns out bicycles weighing only 26 pounds, which, the consul-general says, are an important advance over anything hitherto made in Germany, although distinctly inferior to the best American bicycles in many points. Bicycle racing and records of professional riders cut very little figure in the German market. The demand for American wheels is expected to come mainly from people who will use the wheel for purposes of recreation. Wheels weighing from 21 to 25 pounds, with frames from 22 to 26 inches in height, are recommended for this trade. Wooden rims, rubber pedals and double tube tires appear most in demand. Rat-trap pedals appear to be used only by racing men. There appears to be a prejudice against single-tube tires because of their being regarded as too sensitive for touring purposes. European roads are strewn with hobnails from shoes of peasants, and, knowing this, the German amateur bicyclist reasons that two tubes are less liable to puncture than one, more especially as they possess little of the ingenuity required in repairing punctures or other mishaps. Unless specially ordered, every bicycle should be provided with brakes, wheel guards and spring saddles. Without these imported bicycles needlessly affront public opinion. In many cities in Germany police regulations forbid the use of brakeless machines. In southern Germany wheels are used all the year, and wheel guards are necessary for wet weather. Hard, rigid saddles are condemned by German physicians, and appear to be used only for racing purposes. A great deal of cobblestone pavement exists, which renders riding on a stiff saddle fatiguing and disagreeable. The consul-general recommends a saddle used in America two or three years ago, having plain, well-formed leather seat, resting on steel springs, with an adjustable nut or screw, by which it can be made hard or yielding, at the will of the rider. The consul-general admits that the bicycling taste in Germany is a year or two behind that of the United States, but, as he very well says, the point is not to teach the German cyclists what they need, but to find out what they want, and give them that and nothing else. There is a considerable demand for youths' bicycles, machines of good quality, adapted to the use of boys and girls, which can be retailed for from $50 to $60 each. For this class of cyclists German manufacturers have made scanty provision, the few produced being generally very heavy and of indifferent construction.

Regarding the methods of introduction of American machines, two methods are recommended. One is that of establishing direct relations with German firms who will import the machines, pay duties and distribute them to dealers for retailing. Another is to send a competent salesman, versed in the language, equipped with samples, to visit the principal cities and arrange sales and contracts with independent bicycle dealers, of which there is one or more in every large German town. Whichever plan is adopted these agents must be fully equipped with duplicate pieces, materials and facilities for replacing lost or broken pieces, thus enabling sub-agents to fulfill the customary one-year guarantee. The German import on bicycles is $1.25 on each machine, according to weight, and the importation business proper, he says, can be better managed by an established German firm than by a foreigner. That the credit question is the keystone of an important export trade in bicycles, as in other lines, is evident from the consul-general's recommendation that our exporters should imitate their European rivals and concede something to the long-established customs and methods of purchase and payment which prevail abroad. The American system of cash payments on shipments of goods is, he says, clean and safe and works admirably for interstate commerce, but it loses millions of trade when enforced with foreigners who are accustomed to thirty and sixty day payments. German exporters readily grant such terms to foreign buyers, and as importers they naturally expect similar concessions.

FOREIGN EXCHANGE AND THE STOCK MARKET.

Extensive foreign purchases of stocks and bonds during the early part of the week caused a decided change in the temper and tendency of the foreign exchange market, and imposed a check upon the outflow of gold that has been in progress for two months past. Whether this renewal of foreign purchases in the securities market will continue may be involved in doubt. Its foundation was the more favorable feeling toward American securities in the London market, aroused by indications of the decision of the St. Louis convention in regard to the standard of our currency. This feeling of renewed confidence on the part of foreign speculators was, however, checked on Thursday, and a portion of the securities taken by such interests early in the week were sold, the movement being at once reflected in the declining tendency of the market on that day. On Friday, however, London appeared to have lost its disposition to realize profits on its purchases of Americans, and to be reassured as to the references to foreign relations embodied in the St. Louis platform, of which a somewhat exaggerated view had been taken. It therefore bought to some extent again on Friday. It is somewhat difficult in such a case to arrive at an estimate of the total amount of securities which may have been taken for foreign account, though the balance is probably in our favor.

The necessary creation of bills of foreign exchange and credits abroad, involved in these transactions, had an immediate effect upon the tone and tendency of the exchange market. The rate for demand sterling, which at the close of the past week was firm at 4.88½ or a little better, fell by last Wednesday to a fraction better than 4.88. At this figure the possibility of gold shipments disappeared, although the German steamers sailing on Tuesday and Thursday took altogether but $950,000 in gold. This, it was explained, represented the conclusion of old orders, and the completion of transactions of the same character which had been commenced previously but not concluded. Similarly, when the foreign selling of stocks began on Thursday, the exchange market at once hardened, the rate for demand sterling rising to 4.88¼@4.88⅜, or a little below the figures at which gold could be sent to Europe.

These developments would emphasize the fact that the loss of our market for securities abroad has been one of the chief elements in causing the continued withdrawals of gold during the past six years, or since the Baring panic and the various silver scares. Regaining this market, even to a slight extent, as was the case this week, or as when the Morgan-Belmont syndicate was at work in the spring and early summer of 1895, is the most immediate check that can be applied to gold shipments, and the drafts upon the Treasury gold reserve which they involve.

THE PHILADELPHIA MUSEUMS.

So much has been written and printed regarding the mission of the Philadelphia museums in the work of encouraging and fostering American export trade that it would seem as if any explanation of its aims at this day were superfluous. With the view of correcting any false impression which might arise, the museum authorities have issued the following explanation, which, it is expected, will give emphasis to descriptions of the work already published:

The Philadelphia museums attempt to show to an American manufacturer or merchant the character and kind of goods, as well as the conditions under which they may be saleable, in foreign markets, together with a variety of more or less valuable trade conditions. On the other hand, the museum can in no way or in any sense be a medium through which the American manufacturer may introduce his goods into foreign countries. The bureau of information can only give facts regarding the conditions of foreign markets and their requirements, or concerning the raw products of the world which may be used by the manufacturing industries of this country. The work of introducing goods into foreign markets must be left wholly to the established channels of business. This institution is not organized to take any active part in trade.

The museums will not advise respecting the credit or reliability of any foreign house or buyer. This legitimately belongs to commercial agencies, which are specially equipped for this work. It is the special intention, however, where called for, to supply lists of houses in foreign countries who are handling certain lines of goods, and are importers. All possible care will be taken that this list does not include houses of bad standing in their own community. Such lists will be secured through

foreign boards of trade, chambers of commerce, government commissions or private agents, which together will give fair assurance of the standing of the houses. In no instance, however, will any responsibility be assumed as to the standing or creditability of such houses. The facts will be given as obtained, and upon these the manufacturing interests of this country can judge.

The bureau of information is not prepared to give a response to every inquiry. To its subscribers it promises to give such information as is on file regarding their interests, and to put in force the entire organization to endeavor to collect any and all information that they may request. In no instance can a guarantee to answer all inquiries be given. There may often be more or less delay in getting special information which may not be on file in the bureau. The institution will not exhibit American manufactured products, as it is not intended for an advertising medium. The exhibits will consist wholly of raw products, such as are utilized by industrial establishments of the United States, and of such manufactured products as are of European origin, and will show the manufacturer the nature of the competition he will have to meet in foreign markets.

THE VANDERBILT DIVIDENDS.

On last Wednesday the principal roads composing the Vanderbilt system presented their customary statements and declared the dividends upon the capital stocks of the companies, which are usual at this period of the year. The stock market was too excited and occupied with the St. Louis convention to pay much attention to the matter, and, indeed, there were no features of striking interest in the figures as presented. The New York Central road declared its usual quarterly dividend of 1 per cent. for the three months ending June 30, and therewith issued the following statement of its earnings and expenditures (partly estimated) during the fiscal year ending on that date. The figures, compared with those of the two preceding fiscal years, are:

NEW YORK CENTRAL.

	Year ending June 30		
	*1896.	†1895.	†1894.
Gross earnings	$45,062,000	$42,489,536	$43,678,201
Operating expenses	30,458,000	28,810,443	29,508,406
Net earnings	$14,604,000	$13,679,093	$14,169,784
Fixed charges	10,573,000	10,556,679	10,367,298
Balance	$4,031,000	$3,122,413	$3,802,480
Dividends	4,000,000	4,339,990	4,588,820
Surplus	$31,000 def.	$1,217,576 def.	$786,340

* Partly estimated. † Actual.

These returns are highly satisfactory, the increase in gross for the current year over 1895 being $2,572,464, or 6 per cent., and in net $924,917, or about the same percentage. At the same time the surplus over dividends, $31,000, compares with deficits of $1,217,576 in 1895 and $786,340 in 1894.

The Lake Shore Company declares for the half year the customary dividend of 3 per cent. upon its capital stock and puts forth the statement (partly estimated) for the six months ending June 30, 1896, compared with the corresponding periods in the years 1895 and 1894, as follows:

LAKE SHORE.

	Six months ending June 30		
	1896.	1895.	1894.
Gross earnings	$10,005,765	$9,536,404	$9,382,241
Operating expenses	6,811,779	6,347,268	6,183,826
Net earnings	$3,193,986	$3,189,136	$3,198,415
Fixed charges	1,680,000	1,680,000	1,680,000
Surplus	$1,513,986	$1,509,136	$1,518,415
Dividends	1,483,995	1,483,995	1,483,995
Surplus	$29,991	$25,141	$34,420

The amount earned on the stock in the half year now ending is equivalent to 3.06 per cent. on the share capital, as compared with 3.01 per cent. in the same period last year and 3.07 per cent. in 1895. This, however, is of less significance in the case of Lake Shore than it would be with other companies. In reviewing the annual report of the company for 1895 some time ago, it was pointed out in these columns that the policy of the Lake Shore Company has for a great many years been to provide all amounts required for betterments and improvements from earnings, and not to increase the capital account by the issue of bonds or stock. This is reflected in the disposition of the increased gross earnings for the six months now under consideration. The gain in gross revenue in this case amounts to $469,361, or 4 per cent., but the increase in operating expense is less than $5,000.

The dividend for the half year declared the other day upon the stock of the Michigan Central was 2 per cent., and on that of its leased line, the Canada Southern, for the same period, 1¼ per cent. The statement of the Michigan Central (partly estimated) for the six months is as follows:

MICHIGAN CENTRAL AND CANADA SOUTHERN.

	Six months ending Jan. 30		
	1896.	1895.	1894.
Gross earnings	$6,620,000	$6,200,000	$6,169,000
Operating expenses	4,904,000	4,470,000	4,429,000
Net earnings	$1,716,000	$1,730,000	$1,740,000
Fixed charges	1,200,000	1,200,000	1,200,000
Surplus	$516,000	$530,000	$540,000
To Michigan Central	375,000	382,000	388,000
To Canada Southern	141,000	148,000	152,000

In the case of the Michigan Central corporation the payment of the 2 per cent. dividend leaves a surplus of $240, against surpluses of $7,240 in the same six months of 1895, and of $13,236 in 1894. The Canada Southern, on the other hand, displays a deficit of $46,500, after meeting the dividend, this result, indeed,, corresponding with the outcome in 1895, when the deficit was $39,500, and in 1894, when the revenue failed to meet the dividends declared by $35,500.

OUTLOOK FOR DOMESTIC LEAF TOBACCO.

The attempt to prevent further shipments of Cuban tobacco to the United States has stimulated American tobacco farmers. Havana tobacco has long tended to depress prices of the domestic product, and it is only natural that even the temporary removal, or threatened removal, of that competition should have an effect on prices and production at home. Even though the order has been changed to permit shipments of Cuban cigars, not the leaf tobacco, there are still signs of a boom in tobacco. For several years past the annual output of American tobacco has been increasing, yet as producers of leaf we have not been able to meet the home demand. The St. Louis *Globe-Democrat* is of the opinion we may now so increase the output as to render ourselves independent of foreign leaf tobacco. This, however, seems like an oversanguine view.

In Pennsylvania the tobacco product is large—last year 64,500,000 pounds. It has been hinted that many excellent Havanas are not very different from the tobacco of Pennsylvania, which in its raw state has been sold for 6c. per pound. The peculiarity is that it is a gummy leaf. The tobacco leaf itself is the shape and size of the rubber house-plant. It grows about four feet high and bears a slender-veined leaf. In the Keystone State this leaf has a close texture and a gumminess that unfits it for wrappers, but makes it fine filler, and, it is said, could be used for the best Cuban filler in the world without fear of detection. Since the prohibition affecting the Havana leaf, the price has gone up.

Florida tobacco product is so fine that "the most careless growers can get 45c. a pound for it." One trouble is that there is so very little of the crop. It grows luxuriously enough, but with foreign competition so near them the Florida growers do not increase the acreage. Many have refused to sort their leaves, sending them helter skelter in "running lots," but even in this way a very nice price is obtained. Recently a certain dealer offered $1 per pound for all the Florida tobacco he could get.

In Connecticut a great many farmers raise tobacco. While the Connecticut wrapper is dry and tough, it has moisture enough to keep the cigar in flavor, and does not break. It is this peculiar quality in the leaf that makes it in such demand for wrapping purposes. But it is in the flavor that the Connecticut leaf excels. There is a tobacco known as "cimmer." It is a very good medium tobacco. It is raised in great quantities in Ohio, Wisconsin and Massachusetts.

The writer in the paper named adds that this variety brings 18c. per pound in Ohio, but less in Wisconsin and other states. Illinois tobacco has a wide range of excellence. Only a little of it is grown, as it has never paid the farmers of that state to deal in it. New York also raises tobacco, principally near Corning. There is said to be a quick native demand for it. Vermont tobacco is used similarly. It is of good quality, but is used up so quickly nearby that dealers do not get much of it.

The writer responsible for the foregoing adds that there are 200,000 bales of Havana tobacco of 100 pounds each in the country not yet through the custom house.

Tobacco leaf handlers say there are 700,000 farmers engaged in raising tobacco, and $500,000,000 are invested in the native leaf. One result is that tobacco prices have taken a jump, "so far as the tiller of the soil is concerned," and the "price of tobacco leaf has jumped 50 and 100 per cent. Extra Connecticut wrapper leaf that brought 15c. per pound is now over 45c."

Notwithstanding higher prices for leaf, if the stimulus to its production is maintained, the effect on the price of cigars may be to lower instead of advance them.

BRITISH RAILROAD CAPITAL.

The present "record" prices that are being made for the shares of British railroad corporations in the London stock market are doubtless the result of the combination of enormous amounts of idle capital for which investment must be found, with the scarcity of securities of a class in which the British investing public can repose implicit confidence. Hence, the market prices for "home rails" at London have attained a dizzy eminence, and financial authorities there have not been at all backward in pointing out some of the weak features of the movement. The tendency in question has, however, carried the market values of the debentures, preferred and ordinary shares of the leading British railways to a level which makes the return upon the capital exceedingly small, some instances being noted where, even if the present scale of dividends are maintained, the income to the purchaser would be no better than that upon consols. At the same time examination of the general condition of the railways with respect to the growth of their capitalization reveals some striking facts. It would seem, indeed, from the investigations of the London *Economist*, that the railways of the old country are in this respect suffering from a disease which is well known to American railroad interests, and which would seem to proceed from the constant demand for increased facilities and, therefore, necessarily, for larger investments of permanent capital, while the attendant return thereon, owing to competition and the steady lowering of rates for transportation, is proportionately less. This, the *Economist* urges, has a serious bearing upon the prospects of dividend payments upon ordinary, or, as we should say, common, stocks of the British railways.

It would seem that official figures of capital revenue and working cost of the railways of the United Kingdom are not available from year to year as we have them, through our Interstate Commerce Commission statistics. The journal in question, however, takes the aggregate capital represented by the railroads of Great Britain at the close of 1894, when it was £985,000,000, and compares it with that in 1885, when it stood at £815,000,000. This represents an increase in nine years of £169,000,000. Leaving out £50,000,000 of this increase as the "water" injected through conversions of old loans or the "splitting" of stock, the approximate increase in capital actually laid out would be £119,500,000, or 15 per cent. In the meantime the additional mileage constructed was only 1,739 miles, or 9 per cent., the natural conclusion being that a large part of the increased capital went into improvements to existing lines. The total earnings in 1894 were £79,000,000, as compared with £66,000,000 in 1885, a gain of £13,000,000, or 20 per cent. As against this, however, working cost in the nine years rose from £35,000,000 to £44,000,000, an increase of £9,500,000, or 27 per cent. The receipts per mile of line were £3,820, compared with £3,477, or about 10 per cent. larger, while the cost per train per mile run shows an increase in the nine years of about 6 per cent. The question which these facts suggest is whether the rise in the market value of British railroad stocks has not far overdiscounted any benefit from increased receipts, the record indicated above being calculated to create the impression that the processes not at work will be likely to result in very inadequate returns upon the investment.

GROWTH OF OUR TRADE WITH SOUTH AFRICA.

The increase of the foreign trade of the United States with South African countries is no less rapid than the development of those countries. Within ten years or more the entire map of Africa south of the Mediterranean coast and Saharan desert has been changed, and in many instances foreign nations have put up signs claiming ownership to vast regions of territory. The southern portion of Africa, in which the Germans have monopolized a large portion of the west coast, the Portuguese on the east coast, and the British most of the interior and extreme southern portion of the grand division, also includes the South African Republic and Orange Free State, neither of which possesses a port of its own. Trade with all these districts, though less, perhaps, with the German than others, has been increasing from year to year far

more rapidly than had been anticipated. The news columns of BRADSTREET'S during the past six months have borne testimony to this with the repeated announcement of exports of lumber, of wheat, of wheat flour and other staples to South Africa. The *Handels-Zeitung*, New York, says:

Our export trade to South Africa for the fiscal year ending June 30 amounted to only $5,000,000, and in the three preceding years, 1894, $4,222,912; 1893, $3,500,000, and in 1892 $3,400,000, whereas in the fiscal year to close with this month it will aggregate $10,000,000. This increase will be owing chiefly to our direct steamer connections with South Africa. In the past this trade went mainly via England, as we were dependent on sailing vessels. While no regular line exists, American firms send from three to four steamers to South Africa every month. Recently the sawmills of Oregon have introduced their products there, and steamers go to South Africa "off and on" from the Pacific coast. Our southern exports consist mainly of lumber. Pine used in South Africa comes chiefly from this country. From San Francisco wheat is sent, particularly as there was a failure of the wheat crop both in South Africa and Australia during the past year.

The opportunities which South Africa offers for the introduction of American goods are almost unlimited, but it is, of course, chiefly staples which we send. In one year $1,000,000 worth of rum was shipped there from the United States. More recently large quantities of bicycles, patent medicines, furniture and farm implements have found good markets there. Of the latter, some of the older patterns, which owing to more recent time and labor saving inventions had been slow sellers here, were found to meet all the requirements of the African farmers.

Of the great variety of goods exported to South Africa, the cargo of a ship recently gone forward to that country gives an excellent illustration.

It consisted of lard and lard oil, leather, hardware, lamps and accessories, jute, maize, flour, canned meats, oysters, fish and fruits, wagon grease, turpentine, varnish, woodenware, barbed wire, doors, sashes, frames, plows, axes, cigarettes, baking powder, brooms, nails, dried fruit, petroleum, wheat, clocks, watches, medicines, hams, cooking and heating stoves, wheelbarrows, sugar, cotton goods of all sorts, wagon spokes and hubs, lubricating oils, firebricks, cordage, seeds, iron tubing, steam pumps, starch, glassware, gloves, curtain fastenings and poles, rubber goods, sporting goods, shovels, mining machinery, furniture, organs, whips, hay, clothing, soap, cartridges, wire mats, oats, lumber, oranges, apricots, smoked tongues, iron bolts, books, candles, paraffin wax, suspenders, paper bags, playing cards, glucose, scales, knives, electrical machinery, mats, trunks, tomatoes, syrup, Florida water, windmills, benzine, coffee mills, essences, letter presses, sieves, picture frames, bird cages, plated ware, dental chairs, cloth, lawn mowers, feed cutters, wagons, wooden horses, drugs, typewriters, paper, cards, rye, bicycles, lead pipe, colors, roofing tin, trucks and electrotypes.

In most of the above-named articles American manufacturers can easily compete with the English. In hardware, for instance, the superiority of the American products is recognized all over the world. The export of doors, sashes, blinds, castings, etc., is very extensive. Structural iron, however, is less in demand, from which it is plain that in South Africa they do not yet entertain the thought of erecting high buildings. A lack of harbor facilities still makes traffic with South Africa somewhat difficult. However, preparations are now under way to remedy this. In Natal the harbor depth during the past year has been increased from 7 feet 7 inches to 13 feet 8 inches. It takes on an average thirty days' time for a steamer to reach South Africa, still it is cheaper, up to the present time, to ship via England. Far more significant as bearing on our extension of trade is the fact that while the English grant the dealers of Africa six months' time, American dealers exact prompt payments. Some twenty commission firms in New York are forwarding goods to South Africa, but in addition there are a great many firms who are direct exporters. Until recently, Boston was the chief point for mercantile transactions with South Africa; now, however, this is mainly done from New York.

Many misleading and overglowing accounts have been sent out and taken up by some newspapers, resulting in vast numbers of people going to South Africa, particularly such as had barely enough to pay their way. It should be understood that those looking for clerkships and ordinary laborers should not go there, as the supply of available help of these varieties is four times the quantity for which there is any demand.

Between the fiscal years 1893 and 1894 the increase in the value of importations into Cape Colony was $9,575,000, of which $6,500,000 worth, naturally, were from the United Kingdom and $1,500,000 from the United States. The heavy import trade recorded by Cape Colony is partly explained by the fact that Cape Town is the principal port of the land-locked South African Republic and Orange Free State.

Cape Town, East London, Port Elizabeth and Simonstown, in Cape Colony, Bloemfontein, in the Orange Free State, Johannesburg, in the South African Republic, and Durban, in Natal, are all important and growing places. During 1893 about 1,500,000 gallons of paraffin were imported from the United States. Wheat and flour went there from the United States in large quantities, also lumber, carriage and furniture leather, etc. Americans are numerous there in all walks of life, and especially so in mining. There is a line of direct steamers from New York to Cape Town and "they are all crowded with American goods." The reduction of the wool tariff largely increased shipping between the United States and South Africa, as wool is extensively exported. The importance attached to that trade center by the European governments may be illustrated by the positions assigned to their consular representatives there. The German government pays its consul-general at Cape Town $6,000 per annum; France, $4,500; Portugal, $4,000, while the United States consul receives $1,500, and is not allowed either a clerk or messenger. Yet, according to the official customs returns, the imports of the United States into Cape Colony in 1893 amounted to $2,407,916, as against $146,978 from France, $1,190,097 from Germany and $10,949 from Portugal, showing that the direct imports from the United States are nearly double the value of those from France, Germany and Portugal combined. When it is taken into consideration that large quantities of American products are received there via England, France and Germany (especially via England) and are credited to those countries, it is apparent that the South African consumption of American products "is more than twice that of the products of all Europe, England, of course, excepted."

Nearly all the gold exported from Cape Colony and Natal is, as was to be expected, the product of the South African Republic, from which there are ample facilities for transportation. The interior countries referred to are connected with the coast by a road from Cape Colony to Pretoria, and another, being built, from Delagoa bay to Pretoria. Other roads are under way also connecting Transvaal and Orange Free State points with the south and east coasts. As most of these lines center in Natal and Cape Colony, ports in those colonies promise to become important in the development of South Africa.

Opportunities for trade between the United States and South Africa are far greater than have been taken advantage of. Germany has already recognized the importance of this, and is rapidly establishing branch houses there, particularly in the Transvaal.

ARGENTINE DEBT PROPOSITIONS.

So intently have the great European money and speculative markets been occupied by the manifold attractions of gold mining that little or nothing has been heard for over a year of Argentine and South American finances, or of the securities of those countries, which furnished the basis for the overspeculation that led to the crisis of 1890. It has been known in a general way that the position of the Argentine Republic has greatly improved. Its government has been in firm hands, and there has been an absence of revolutionary movements. Moreover, the present rulers of Argentina have shown a commendable desire to straighten out the finances of the country, and to deal fairly with all classes of its creditors. This policy is, of course, open to suspicion. In order to pave the way for fresh borrowing, it is evident that renewed confidence must be created in the money markets of the old world. Whether the Argentine official classes have this for their ultimate object or not, they have acted in a way with reference to the debt which, with the increase in the revenues and revival of the country's trade, has brought Argentine securities into increasing prominence and favor on the London and continental stock markets. One of the most prominent results of this has been the comparatively successful liquidation of the Baring estate, the assets, mainly consisting of Argentine values, having turned out much better than was hoped for when the Bank of England stepped into the breach.

At the present time, indeed, the London financial press finds it necessary to utter some notes of warning as to the extent and rapidity with which the securities of the lately bankrupted Argentina have advanced. Admitting the improvement in its material condition and the apparent stability of political affairs there, it is asked whether the future plans upon which much of the rise is based are feasible, or likely to have favorable results. The whole matter, in fact, seems to turn upon the fate of the scheme for the unification of the entire debt of the country, including not only the direct obligations of the federal government, but the debts of the various provinces or, as we should deem them, states, as well as the guarantees, both federal and state, of railroad indebtedness.

The plan which was referred to last year in these columns was to convert all the various obligations under these heads into one consolidated 4 per cent. loan of a total of some $380,000,000, or £76,000,000. This scheme, however, fell through, owing to the opposition of Messrs. J. S. Morgan & Co., and other large London houses representing the owners of the principal classes of the Argentine debt, who successfully resisted the proposal to cut down the interest on the 5 per cent. bonds and on the existing funding loan. The same proposition is now to be placed before the country's congress and its creditors. The questions are whether the creditors will waive their objections, and whether the holders of provincial obligations will accept the scaling down of their principal, which, in some cases, will be as much as 50 per cent. There are also grave problems as to the sufficiency of the revenues to meet the additional interest charges. The latter, under the full scheme, including the sinking fund proposition, would amount to £3,800,000, or $19,000,000 per annum, a rather heavy figure for a country of about 4,000,000 inhabitants, all told.

KAFFIRS AND WESTRALIANS.

It is not flattering to our national pride to note the fact that, while the British and continental moneyed public continue to show a limitless appetite for gold mining enterprises in various parts of the earth, there has scarcely been an instance of the successful flotation of a property of that kind situated in the United States. The distrust of our currency and financial situation extends even to our gold mines, in spite of the recognized fact that the new states of the west present opportunities for gold-mining development far superior to those possessed by West Australia and other regions into which so much European capital is now pouring. The London mining excitement, diverted from the South African fields by the Johannesburg revolt, has of late expended its force upon Westralians, as they are called. Notwithstanding the imperfect knowledge of the field in question, the manifest disadvantages due to the scarcity of water, and the severe disappointments that have already resulted in a number of instances, the work of floating, mining and exploring corporations based on Westralian properties goes on bravely. It has already excited doubt and criticism, the volume of capitalizations of this character being equal to, if not larger, than those of the whole Witswatersrand, with proved gold bearing and producing capacity. Nevertheless, even the critics of the movement in the London daily and financial press, while they point out the excessive length to which it tends, have to record the fact that the already considerable rise in prices in that department of the mining market will probably continue.

On the other hand, the events of recent weeks have put an end to uncertainty about the Transvaal. As long as the lives and property of so-called reform leaders of Johannesburg were used as counters in the game of diplomacy between President Paul Krüger and Colonial Secretary Joseph Chamberlain the public could not be induced to view its former favorites, the Kaffir mines, with any approach to confidence. The Boer leader having, however, won a substantial victory over both ex-Premier Rhodes and the Afrikander imperialists, as well as over the British Cabinet, can well afford to be magnanimous. The release of the minor offenders, and the assurance that a similar course would be adopted in regard to the four leaders who were first sentenced to death and then to fifteen years' imprisonment, ends the long strain and insures the

resumption of activity in the Rand. It is, indeed, highly probable that the interruption caused by the Jameson raid, and the consequent loss of revenue to the state, was not the least important of the considerations that have impelled the sturdy burghers to adopt a policy of mercy. It is certain that the news was received with enthusiasm in the London market, and that Kaffir shares have "boomed" in a way that suggests a renewal of the exciting speculation that raged in them during the whole of 1895. The attention which has been given to Westralians is therefore likely to decrease, while we can anticipate lively times in the Kaffir circus from this time on, and, what concerns us, a further withdrawal of interest from American shares and securities of all kinds, unless, indeed, the prospect of a victory for sound money in the coming national election supplies a basis for a revival of confidence in our financial position and speculative possibilities.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

[East of Rocky Mountains.]

Bushels week ending	1896.	1895.	1894.	1893.

New Orleans wholesale merchants have complained of unfair treatment in the matter of freight rates between that port and New York city, and declare they will have to have concessions or take measures to secure lower rates of freight from some line—one which may be established, if necessary. New Orleans merchants claim that they bring a large volume of freight there from New York by sea, notwithstanding which advantage New Orleans merchants "are not allowed such rates of freight as will enable them to advantageously compete with rival markets." The claim is that the steamship companies enjoy great advantages at New Orleans, and by means of the facilities possessed there, they are able to handle freight from New York at a low cost. As New Orleans makes that possible, her merchants naturally expect to derive some advantages from these facilities. "As a matter of fact, they receive little better treatment than would be the case were this city merely a way station. Rates are made entirely with respect to the through business to San Francisco, or the trade of the interior of the country, and New Orleans is accorded no special advantages."

The foregoing is the point of view of the New Orleans *Picayune*, which adds that, as there is little or no sentiment in business, it may be assumed that merchants will receive no permanent concessions from the steamship lines until it is shown they are able to secure the services of some outside competing line. The advice is offered to merchants, who receive a large volume of freight from New York annually, to encourage an outside line to send ships to New Orleans by the promise of steady patronage. Even if it were found impossible to secure a regular line, it would be entirely feasible to charter a vessel at a very much lower rate than is now charged by the regular lines. This experiment was tried something more than a year ago, when rates to San Francisco were said to be exorbitant. San Francisco merchants chartered a steamer and sent her to Colon to take on board a cargo of California produce which had been brought across the Isthmus of Panama. That competition brought a prompt remedy, "and similar tactics in the case of the New York business would be sure to bring about a like result." There ought to be no difficulty about providing competition sufficient to lower rates, particularly in the case of New Orleans-New York trade, as, "owing to the large volume of freight constantly going both ways, there are ample inducements to hold out to shipowners."

A recent report of the British vice-consul at Lyons, France, indicates that the total production of raw silk in France last year was much less than in the previous one. In 1894 it was 1,974,000 pounds, while in 1895 it was only 1,719,000 pounds. The production of cocoons was 20,484,000 pounds in 1895, against 23,287,000 pounds the previous year. From the figures of the Lyons Clearing House, it seems that 15,056,300 pounds of silk was employed by the Lyons manufacturers last year, while a total of 3,146,500 pounds was used by those of St. Etienne. During the year both hand and power looms were fully occupied. The Lyons Chamber of Commerce estimates the production of silk goods at about 9 per cent. advance on last year, but the St. Etienne Chamber of Commerce shows a far more important increase of more than 30 per cent. The value of the silk manufactures of Lyons last year was £15,966,000, and of St. Etienne £3,752,400. This increase, as far as Lyons is concerned, is confined entirely to all-silk goods. The mixed goods, silk and cotton, wool, etc., show, on the contrary, a small decrease. The chief countries to which these goods are exported are England and the United States. The former took them last year to the value of £4,637,280, and the United States £2,866,040, being in each case an increase on the previous year. The importance of the trade between Lyons and England is shown by the fact that the gross weight of silk goods sent direct to England by fast good train amounted last year to 3,467,000 pounds. This is exclusive of the goods sent by slow train and those exported by Paris houses. The total export from France to England of silk goods of all descriptions last year was 4,286,000 pounds. During the year several new mills were built and some of the old ones enlarged, increasing the number of power looms from 25,000 to 26,000. In 1889 the total was only 20,000 looms, and the increase has been regular. The number of hand looms in the Lyons district is estimated at from 85,000 to 90,000, but, as a large number of these are scattered in the weavers' dwellings, often in the mountains, it is difficult to give their number with any certainty.

A statement of more or less contemporaneous interest has been given out by President Cleveland, who has been credited in some quarters with being desirous of a nomination for a third term. This idea is put at rest by his declaration, the greater portion of which, however, is devoted to a protest against the adoption of a free coinage platform at the Chicago convention. Mr. Cleveland declares his refusal to believe that when the time arrives for deliberate action there will be inserted in the Democratic platform a demand for the free, unlimited and independent coinage of silver. He says that it is clear to him that such a course would inflict a very great injury upon every interest of the country, which it has been the mission of the party to advance, and will result in lasting disaster to the party organization. There is little hope, he says, that as a means of success this free-silver proposition, after its thorough discussion during a political campaign, will attract a majority of the voters of the country, and many of the illusions influencing those now relying upon this alleged panacea for their ills will be dispelled before the time comes for them to cast their ballots, which will express their sober second thoughts. The adoption by the Democracy of this proposition would, he says, give to their opponents a great advantage both in the present and future. Mr. Cleveland urges that at Chicago no effort should be spared to secure such action of the delegates as will avert party demoralization. It is, he says, a place for consultation and comparison of views, and those Democrats who believe in the cause of sound money should there be heard and be constantly in evidence. A cause worth fighting for, he says, is worth fighting for to the end, and if sound-money Democrats suppose there is danger of a mistake being made, such danger should stimulate their activity in averting it instead of creating discouragement.

Texas has lately had a good roads convention whose proceedings were of much interest. A number of papers were read, and the discussions had showed that among the members road improvement was a subject of genuine concern. The convention adopted resolutions recommending that there should be established by the state of Texas a commission to be known as the state road board, to be composed of the governor, the superintendent of the state penitentiaries, and a professional engineer and geologist to be appointed by the governor; that the state road board should cause a careful examination of the state to be made for materials available for permanent roads, and should exercise general supervision over plans for road construction conducted with state aid; that the state should establish as speedily as possible road material supply camps in different portions of the state to be operated with convict labor, and that a liberal proportion of the output of such camps, not to be less than one-half, should be furnished at the camps free to counties for permanent road construction, according to plans approved by the state road board; that the balance of the output should be sold and the proceeds turned into the penitentiary fund; that the board, among other things, should arrange for cheap transportation of the output to the counties requiring it, which arrangements should be available to such counties; that, as far as practicable, the state penitentiary board should hire short-term convicts to counties for road construction upon terms that will render such convicts self-sustaining, and that existing obstacles to such hiring should be removed, to the end that the greatest possible number of convicts may be employed in road construction, and thus, as far as may be, remove them from coming into competition with free labor; that no state aid should be furnished to any county except after submission to and approval by the state road board of the plans of the proposed work, and, further, that the state shall not be obligated to furnish material beyond one-half the output of supply camps, and that the legislature of Texas should forthwith establish at least one such supply camp. The work begun by the convention at Galveston is to be carried on further, and the convention is to meet in Dallas on October 8. Meanwhile the political parties in the state are to be asked to put planks favorable to road improvement in their platforms.

CURRENT BUSINESS NEWS.

Industrial.

The production of bituminous coal in the state of Texas for the year 1895 shows:

	Tons		
	1895.	1894.	*Increase.*
Bituminous	373,640	331,103	42,537
Lignite	141,400	91,094	50,306
Totals	515,040	422,197	92,843

Commenting on the above, a writer in the *Coal Trade Journal* says: "The production of bituminous coal has not increased as rapidly as was hoped for, because of the strong competition from coal fields without the state." The supply of Texas coal is far in excess of the local demands.

The price of print cloths has fallen to 2 7-16c. This price has never been reached but once before in the history of the local market, and that was in March, 1895. The drop in prices is thought to make a general shut-down in July more probable than before.

W. D. Mahon, president of the Amalgamated Association of Street Railway Employees, has announced in Milwaukee that the street railway employees of Detroit and Toledo, 1,600 in all, had agreed to each contribute $1 a week to aid the strikers in Milwaukee.

The attorney-general of Wisconsin has begun an action at Dartford looking to the dissolution of the "Sash, Door and Blind Trust." It is known as the National Manufacturing Company, and includes nearly all the manufacturers of the articles named in Wisconsin, Illinois, Minnesota, Michigan, Iowa, Missouri, Ohio, Indiana and Kansas.

The *Chattanooga Tradesman* says: "An encouraging transaction for the week reported from Alabama, in the Birmingham district, was the sale of 500 tons of pig iron for immediate shipment to Italy made by the Tennessee Coal, Iron and Railway Company. Negotiations are also pending between this company and an Italian steel-making concern for the delivery for a term of years of 50,000 tons of iron per annum."

The London *Westminster Gazette* says: "The consumption of copper for the twelve months ending June has been 51,000 tons larger than in the preceding year. Since the end of April last there has been a rise in the price of Chili bars to the extent of £2, which is hardly matter for surprise.

At Toledo iron ore from the Lake Superior region, and coal from the Pennsylvania and Ohio mines, meet on the docks, and it is claimed there is no more advantageous place for iron and steel works. Her recent prosperity "has been largely due to the bicycle industry, which now engages twenty-four concerns in the city." The resources of Toledo's banks "have nearly quadrupled during the last ten years. The great development of oil in northwestern Ohio, which naturally finds its headquarters in Toledo, has had a profound influence upon the prosperity of the city."

The Brotherhood of Tailors in New York is preparing for a strike in July "to prevent a return by the contractors to the sweating system."

The conference committee representing the tinplate workers and the manufacturers, at Pittsburgh, was unable to fix upon a wage scale to govern union mills for 1896-97. If an agreement is not reached by July 1 work is likely to be suspended in the trade throughout the country.

The big American liners have been "breaking records" across the Atlantic. The St. Paul ran from Southampton to Sandy Hook in six days and six hours over the long course, an average of nearly twenty-four miles an hour for the whole trip. An exchange in commenting says: "The old world has found out that the new can build fast and splendid passenger boats as well as fast and terrible fighting machines for our navy. The child has been born some years who will see in this country a shipbuilding trade beside which that of all Europe will be a small affair."

Commercial.

Messrs. Clapp & Co.: "The United States government report claimed the acreage to be 2,905,000. The *Price Current* thinks the government report indicates a crop of 475,000,000 bushels or more, and says if this be correct the surplus will be ample to meet wants of any and all importing countries. The *Daily Bulletin* forecasts a crop of 463,729,000 bushels, based on the government report. Statistician J. C. Brown makes the crop equal 453,339,000 bushels. The Duluth *Commercial Record* and the *Daily Bulletin* each forecast a crop of about 475,000,000 bushels. The *Bulletin* estimates the yield in fifteen leading winter-wheat states as 12.9 bushels per acre, equaling 259,529,000 bushels, against 249,139,000 bushels as per the government reports, based on an estimated acreage of 20,036,000. The Liverpool *Corn Trade News* estimates European crop will be 1,440,000,000 bushels, against 1,456,000,000 in 1895 and 1,488,000,000 bushels in 1894, and that the United Kingdom will grow 12,000,000 to 16,000,000 bushels more than in 1895, when 38,000,000 bushels was the crop. France may grow 340,000,000 bushels, or about the same as in 1895. Spain imported in eight months ending April 30 only 2,376,000 bushels, against predicted imports of 10,000,000 bushels, and 6,004,000 bushels for eight months last season same time. Crop prospects are reported exceptionally good for Germany and Russia, and good for Roumania, Bulgaria and Austria-Hungary, and Argentine reports are favorable for seeding. The rye crop condition in this country is reported as 85.2 and acreage 96.9, against condition of 85.7 in June, 1895. The Cincinnati *Price Current* says: 'The government underestimated the 1890 crop about 30,000,000, 1891 about 63,000,000, 1892 about 34,000,000, 1893 about 79,000,000, 1894 about 55,000,000,' and thinks the 1895 about right, or the six crops an aggregate of 261,000,000 bushels less than reported. Some crop reporters think the 1895 crop was underestimated fully 40,000,000 bushels, and that the last six crops grew about one average crop more than the government reported."

A New York dispatch says that the National Linseed Oil Company and representatives of all the large outside interests will meet to-day for the purpose of entering into an ironclad agreement to advance and maintain prices.

The Yearbook of the Department of Agriculture for 1895 is being distributed. Of the 500,000 copies, 110,000 copies are allotted to the senators and 360,000 to the members of the House of Representatives—or over 1,000 copies for each member of the two houses of Congress, the comparatively small remainder being turned over to the Department of Agriculture for its exchanges and correspondents. The Yearbook contains (1) a general report of the operations of the department; (2) a series of papers prepared in the different bureaus and divisions of the department, or by experts specially engaged, and designed to present in popular form results of investigations in agricultural science or new developments in farm practice. These are illustrated by ten full-page plates and 134 text figures; (3) an appendix of 104 pages containing miscellaneous information and agricultural statistics compiled down to the latest available date, relative to the production, values, per capita consumption, exportation and importation of farm products; (4) an index of 30 pages.

Financial.

The following securities were sold at auction this week at New York:

1,070	Shares Union Warehouse Co.; 99 8-10 shares Empire Warehouse Co.; 175 shares United States & Brazil Steamship Co.; 25 shares New York Grape Sugar Co.; 76 shares West Lynchburg Land Co.; 161 shares New York & Brooklyn Coffee Co.; 5 shares Fowler Rice Co., Limited	$11 for lot
3,333	Shares Rainy Mining Co.; 5,333 shares Monte Cristo Mining Co.	$11 for lot
4	Shares Everett Chamber Commerce; 20 70-100 shares Everett Land Co.	$1 for lot
1	Bond Brooklyn Union Publishing Co.	$13
2½	Shares Columbian Whaleback Steamship Co.	$10
3	Certificates membership of the Maritime Association of the Port of New York	$7
5	Shares Canal Street Bank stock, par value $100 each	$7
50	Shares Second Avenue Railroad Co., $100 each (hypothecated)	160⅝
28	Shares Mechanics' National Bank, $25 each	190⅛
15	Shares Lawyers' Title Insurance Co., $100 each	148½
1,000	Shares New Jersey Mining and Improvement Co. (hypothecated) $100 each	$50 the lot
60	Shares Western National Bank, $100 each	111⅛
8	Shares Gallatin National Bank, $50 each	302
$1,500	Detroit Gas Co. 5 per cent. income bonds, due 1904, interest February and August, one of $1,000 and five of $100 each	66
20	Shares Flint & Pere Marquette Railroad Co. preferred (hypothecated), $100 each	33⅜
10	Shares People's Trust Co. of Brooklyn, $100 each	219
6	Shares Importers' & Traders' National Bank, $100 each	539
20	Shares Title Guarantee & Trust Co., $100 each	310
15	Shares Chautauqua County National Bank of Jamestown, N. Y., $100 each	100
$5,000	Newport Mining Co. of Wisconsin 6 per cent. gold bonds, due 1902, coupons January and July, $1,000 each	30

The Norfolk & Southern Railroad Company has declared quarterly dividend No. 17 of 1 per cent., payable July 10.

The Minnesota Iron Company has declared a quarterly dividend of 1½ per cent., payable July 15.

The Michigan Central Railroad Company has declared a semi-annual dividend of 2 per cent., payable August 1.

The Canada Southern Railroad Company has declared a semi-annual dividend of 1¼ per cent., payable August 1.

The Lake Shore & Michigan Southern Railroad Company has declared a semi-annual dividend of 3 per cent., payable August 1.

The New York Central & Hudson River Railroad Company has declared a quarterly dividend of 1 per cent., payable August 1.

The Minneapolis & St. Louis Railroad Company has declared a dividend of 2½ per cent. on its first preferred stock and 1½ per cent. on its second preferred stock, payable July 15.

The Treasury Department has nearly completed the payments of beet and maple sugar claims under the bounty appropriation of $238,289, and it is expected that warrants covering the whole amount will have been issued by July, when work will begin on the $5,000,000 appropriation for cane sugar.

The London *Statist* remarks that "one safeguard against a bad scare is the miserable level that three-fourths of American securities have lowered themselves to. Their safety lies in the fact that so few of them are worth selling 'bears.' Not more than four or five stocks are at prices worth calculating interest on at a carry-over."

The action of the New York Clearing House in abolishing restrictive indorsements on checks has been followed by similar action on the part of the clearing houses of Boston, Philadelphia, Baltimore, Cincinnati and Norfolk. San Francisco is to follow suit.

The Toledo Press Club calls attention to the fact that a national convention of the credit managers of banks, mercantile and manufacturing establishments will be held in Toledo, Ohio, June 23-25.

Railroads.

The following railroads report gross and net earnings for April this year and last:

	Gross earnings		Net earnings	
	1896.	1895.	1896.	1895.

The all-rail east-bound shipments of dead freight from Chicago last week were 62,202 tons, against 64,108 tons the previous week and 45,786 tons the corresponding week of the previous year.

An order has been issued to the heads of departments of the Pennsylvania Company, and its various lines east and west, to undertake no new construction work, to stop work already begun, where practicable, to confine the cost of maintenance to the lowest amount consistent with safety, and to reduce all expenses wherever possible. This is in accordance with the well settled policy of the company to make improvements only when current business amply warrants the expenditure, and to slow down when these conditions are threatened. It is understood that the diminished business complained of in various parts of the country is reflected in the business of the company's lines.

The London *Times* says: "Ten years ago there were four tramway companies in Chicago, capitalized at $11,437,000 and working 90 miles. To-day there are 29 companies, having a capital of $187,208,000 and operating 342 miles. The horse car has practically disappeared, the motive power being: electric, 270 miles; cable, 42; horse, 18; steam, 11 miles. New electric lines now in construction will increase the total city mileage to 400 miles. London has less than three miles of mechanically worked tramways, while the total street length of tramways is ony 136 miles, all worked by horse power."

A popular work on railroading estimates the ordinary load for a ten-ton freight car as follows: Whisky, 60 barrels; salt, 70; lime, 70; flour, 90; eggs, 130 to 160; flour, 200 sacks; cattle, 18 to 20 head; hogs, 50 to 60; sheep, 80 to 100; lumber (green), 6,000 feet; lumber (dry), 10,000; barley, 300 bushels; wheat, 340; apples, 370; corn, 400; potatoes, 430; oats, 680, and bran, 1,000.

The earnings of the Georgia & Alabama Railroad Company are increasing steadily. The earnings for the first week in June, just received, show an increase over the corresponding period of last year of 62 per cent., against an increase in mileage of 14 per cent. This road runs as a through line from Montgomery to Savannah, and it is claimed is 70 to 80 miles shorter than any other route between those cities.

The New York Central Railroad Company reports for the three months and year ending June 30, this year and last, as follows:

	Quarter ending June 30	
	1896, *Estimated.*	1895, *Actual.*
Gross earnings	$10,770,000.00	$10,494,668.35
Operating expenses	7,240,000.00	7,500,750.32
Net earnings	$3,530,000.00	$2,993,918.03
First charges	2,650,000.00	2,651,587.38
Profit	$880,000.00	$342,330.65
Dividend	1,000,000.00	1,000,000.00
Deficit	$120,000.00	$657,669.35

	Year ending June 30	
	1896, *Estimated.*	1895, *Actual.*
Gross earnings	$45,062,000.00	$42,489,537.06
Operating expenses	30,458,000.00	28,810,443.33
Net earnings	14,004,000.00	13,679,093.73
First charges	10,573,000.00	10,556,679.89
Profit	$4,031,000.00	$3,122,413.84
Dividend	4,000,000.00	4,339,990.50
Surplus	$31,000.00	*$1,217,576.66

* Deficit.

The Lake Shore & Michigan Southern reports for the six months ending June 30:

	1896.	1895.	1894.
Gross	$10,005,765	$9,536,404	$
Operating expenses	6,811,779	6,347,268	
Net	$2,193,986	$3,185,136	$3,198,415
Proportionate exp. to gross	68	66⅔	65⅞
Charges	1,680,000	1,680,000	1,680,000
Surplus	$1,513,986	$1,509,136	$1,518,415
Dividends	1,483,995	1,483,995	1,483,995
Surplus	$29,991	$25,141	$34,420

The Michigan Central reports for the half year ending June 30:

	1896.	1895.	1894.
Gross	$6,620,000	$6,200,000	$6,169,000
Operating expenses	4,904,000	4,470,000	4,429,000
Net	$1,716,000	$1,730,000	$1,740,000
Proportionate exp. to gross	74	72	71⅞
Charges	1,200,000	1,200,000	1,200,000
Surplus	$516,000	$530,000	$540,000

Miscellaneous.

The July *Forum* contains a paper by M. Paul Leroy-Beaulieu, the distinguished French political economist, discussing the political situation in the United States from a European point of view, and pointing out what he calls the unmistakably disastrous consequences to the United States that would follow the election to the presidency of anyone not unequivocally committed to the upholding of the single gold standard.

Foreign.

The Indian railway report for 1895 shows progress, as over 800 miles were opened, while nearly 3,800 miles were under construction or sanctioned. The net earnings rose 59 lakhs, the total exceeding 14 crores 11 lakhs. The return on capital was 5.78 per cent. The charge to the state will be only 76 lakhs, or about half the amount of the preceding year.

An International Agricultural Congress will be held at Pesth in connection with the Millennial Exhibition, between September 17 and 20.

The Canadian Fisheries Department has received returns of the spring catch of seals by the Canadian schooners, taken off the coast of Washington and British Columbia, which show a falling off of nearly 1,000 skins, the figures being 8,928 this year as against 9,853 last spring.

Beerbohm (London) says: "For the past six years the total European crops have been as follows:

	Quarters.		Quarters.
1895	183,500,000	1892	171,750,000
1894	191,950,000	1891	147,260,000
1893	179,360,000	1890	171,675,000

Even if this year's European crop reaches that of last year, however, it will be sufficient, with a 500,000,000 bushel American crop, to frighten buyers, who have nowadays become a very timid class of men."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Building—Contractor's Liability.

The Supreme Court of Indiana held, in the recent case of Daugherty vs. Herzog, that a contractor who, under a contract with the owner of a building, remodels such building in accordance with the owner's desires, and turns it over to the owner, by whom it is accepted, is not liable in damages to one who is afterward injured by the collapse of the walls of such building while he is passing along the sidewalk in front of it.

Husband and Wife—Homestead.

The Kentucky Court of Appeals held, in the recent case of Summers vs. Sprigg, that in Kentucky a husband is not entitled to a homestead exemption in the lands of his wife until after her death, her lands not being subject to his debts, and that where a debtor moved from a tract of land owned and occupied by him as a homestead to a tract of land owned by his wife, which was separated from his land only by a public road, and used both tracts as if they were contiguous, it could not be said that he had abandoned his homestead, and, his land being worth less than $1,000, he was entitled to have it set aside to him as a homestead.

Railway—Passenger—Negligence.

The Supreme Court of Indiana held, in the recent case of the Evansville Street Railroad Company vs. Gentry, that evidence which showed that a passenger left a north-bound street car at the south side of a cross street, as it was slowing up, to stop at the north side of such street, fifty feet away; that another car, coming south, at a high rate of speed, was then 200 feet away; that such south-bound car passed the crossing at a very high rate of speed, and that immediately afterward the passenger was found lying between the car tracks, forty-five feet south of where he left the car, suffering from injuries inflicted by the south-bound car, from which he died, failed to establish freedom from contributory negligence on the part of the injured person.

Married Woman—Suretyship.

The Supreme Minnesota Court held, in the case of Siebert et al. vs. Quesnel et al., that whether a contract executed by a married woman in connection with her husband is one of suretyship is to be determined by a consideration of whether or not it was made by her upon a consideration running to her or for the benefit of the estate, and that when it appears from a contract entered into by a husband and wife that she is simply a surety for the payment of his individual debt and he dies leaving an estate amply sufficient to pay and discharge all claims against it if duly presented and allowed, it is incumbent upon the creditor to present his claim against such estate, and if he fails so to do within the period fixed for the presentation and allowance of such claims, the surety is released from further personal liability on the contract.

Railroad—Ticket—Passenger—Ejection.

The Kentucky Court of Appeals held, in the recent case of Louisville & Nashville Railroad Company vs. Gaines, that where a limited railroad ticket was by mistake of the agent issued to a passenger who had contracted and paid for an unlimited ticket, and the passenger when he presented the ticket on the next day was ejected from the train because the ticket had expired, although the fault was that of the agent who issued the ticket, and not of the conductor, the passenger had the right to maintain an action of tort against the company to recover damages for the injury, and that although the facts with reference to the purchase by plaintiff of the ticket and as to his entering the train are stated in the petition, they are mere matters of inducement, and the action is to be regarded as ex delicto and not ex contractu.

Bill of Lading—Draft—Delivery.

The Supreme Court of Georgia held, in the recent case of Hobbs et al. vs. Chicago Packing & Provision Company, that where the owner of goods shipped them upon a bill of lading whereby they were consigned to his own order, at the same time drawing in favor of a banking partnership "for collection" a draft upon a person to whom the goods were intended to be delivered upon payment of the draft, and also attaching to the draft the bill of lading, so indorsed as to give the partnership control of the possession of the goods, a delivery of them by the firm to the drawee of the draft without requiring its payment was, as against the owner, a conversion subjecting the firm to an action of trover; that the rule above announced was not altered by the fact that the owner, not knowing that the goods had already been delivered, agreed to make a like shipment of other goods on condition that the partnership would guarantee the payment of the former draft within a given time, it appearing that the real purpose of this agreement was simply to expedite the delivery of the goods first shipped and the collection of the price of the same, and that the wrongful delivery of the goods being an act done in a matter within the scope of the partnership business, such delivery, though made or caused to be made by a single member of the firm without the knowledge or consent of the other and only remaining member, rendered the latter liable.

Corporation—Stock—Purchase—Profit.

The Kentucky Court of Appeals held, in the recent case of McDoel vs. Ohio Valley Improvement & Contract Company's Assignee, that where the president of a corporation volunteered to act as agent for appellant to purchase for him some of the stock of the corporation, representing that the company had no stock to sell, but agreeing to procure it from some of the original subscribers, and, in carrying out this arrangement, the president of the corporation purchased stock for the corporation and sold it to appellant at a profit to the corporation, the appellant upon discovering the facts had the right to repudiate the contract, for, although there was no fraud or intentional wrong on the part of the president, he acted practically as the agent of both buyer and seller without disclosing his double agency, and that acts done by appellant after the purchase of the stock, but before he had knowledge of the facts, cannot be regarded as a ratification of the acts of the agent.

Fire—Locomotive—Evidence.

The Supreme Court of Minnesota held, in the recent case of Flanagan et al. vs. Chicago, Milwaukee & St. Paul Railway Company, that where in an action brought to recover damages caused by a fire alleged to have resulted from the careless and negligent management and operation of one of defendant's locomotives, there being no direct evidence as to the origin of the fire, the court charged the jury that if from the evidence they found that the fire started near defendant's right of way soon after a certain train passed, and that there was no other fire in the vicinity except that in the locomotive, and no other apparent cause for the breaking out of the fire, they would have the right to infer and find that it was set by the locomotive, but that they "would not be bound to so infer or find if there is reasonable ground to believe that it may have been started in some other way," the charge was misleading and prejudicially erroneous.

Insurance—Policy—Limitation.

The Supreme Court of Georgia held, in the recent case of the Hartford Fire Insurance Company vs. Ames et al., that when an action was brought upon a policy of fire insurance by one other than the person to whom the policy was issued, the declaration alleging that the latter "had for valuable consideration transferred and assigned and delivered said policy of insurance to petitioner," and also setting forth a copy of the policy, upon which, however, there was no copy of any assignment or transfer to the plaintiff, grounds of demurrer alleging that "it does not appear that the alleged transfer and assignment of said contract was in writing," and that "said alleged transfer and assignment is not set forth and declared on," ought, in the absence of an offer to amend by averring that the assignment was in fact in writing and by setting forth the writing itself, to have been sustained. The court held that although the policy contained a contractual limitation to the effect that suit must be brought thereon within twelve months next after the fire, yet where in an action upon the policy the declaration alleged that after the fire the insurance company, having been garnisheed by creditors of the insured, "represented and promised to adjust and pay the loss by said fire as named in said declaration when said garnishment could and should have been disposed of, and that by reason thereof the plaintiff avers that he did not file and commence said action within one year after the fire," a ground of demurrer alleging that the action could not be maintained because brought after the twelve months had expired, was not well taken, it being under these circumstances a question for the jury whether or not the plaintiff, in consequence of the above-mentioned promise, was induced not to bring suit within the year, and whether or not the conduct of the company, under the circumstances, amounted to a waiver of its right to insist upon the limitation stipulated for in the policy.

BUSINESS NOTES.

Production of Coffee.

Mr. J. Ferguson, of the *Ceylon Observer*, writes to correct an impression that there is danger of an overproduction of coffee, and to encourage coffee planting experiments in British Africa. He points out that in sixteen or eighteen years the coffee export of Ceylon has fallen from 1,100,000 to 50,000 cwts., that of South India from 450,000 to 240,000, and that of the West Indies from 150,000 to 80,000. Though Brazilian production has largely increased, prices continue high (100s. to 107s. for middling plantation coffee in 1895, against 91s. to 102s. in 1889), and Ceylon tea planters are investing surplus capital in a new coffee district in East Java.

Manitoba Wheat Crop.

The Winnipeg *Commercial* (about May 15) says the position of the Manitoba wheat crop of 1895 is about as follows:

Shipped before the close of navigation—	
To Fort William	10,097,000
To Duluth	1,500,000
Flour	2,000,000
Total	13,597,000
Shipped since close of navigation to Fort William	3,616,000
Shipped by Northern Pacific	550,000
Direct shipments, all rail, C. P. R.	375,000
Flour shipped or in store	1,500,000
Wheat in store, interior	4,000,000
Total	23,638,000

Conservative estimates place the surplus still held by farmers for sale at about 4,000,000 to 6,000,000 bushels.

Germany and the British Coal Trade.

The German government has reduced the railway tariff on Silesian coal destined for the ports of Swinemünde and Stettin to such a point that the lighter and steam tug owners on the Oder declare they will be ruined. The British consul at Stettin thinks that this and other facts point to a speedy resumption of the higher tariff, and he advises the English coal exporters to hold on to their trade with the two ports mentioned, even if it be at a temporary loss. At Swinemünde six-sevenths of the imports, and at Stettin one-eighth, consist of British coal, and the Merchants' Corporation of the former have informed the government that the town will be ruined by the cessation of this trade, against which the reduction is evidently aimed.

Monetary Standards of Value.

An English exchange says: "Java furnishes a capital object lesson with regard to the disadvantages of a fictitious standard of value. The Dutch colonies are kept on a gold basis, with the result, among others, that 'a considerable quantity of very well manufactured counterfeit silver coin has found its way into the island from sources beyond the control of the Netherlands government.' Note that these coins are of full weight and proper fineness, the profit being made out of the difference between their metallic value and the value at which they circulate as subsidiary token money. Our consul states that, 'as a deterrent against the use of so much silver, 5 guilder notes have again been brought into circulation.' Thus, in the attempt to force an unnatural currency in the East, the advocates of the gold standard have once more shown themselves the sponsors of paper."

British Columbia Gold Mines.

The London *Financial News* says: "Business is just beginning in the shares of the Invicta gold mines, which are situated on the Kootenay river, British Columbia. The company was started last year, and a working capital of £15,000 was privately subscribed—an amount just double what the experts considered to be necessary. The mines are placer ones, and the manager reports that the results of the tests he has been able to make convince him that the company has a very valuable deposit of gold-bearing gravel of great extent, and that the values originally placed upon it were stated with great moderation. The building of the dam has been completed, the floodgate has been enlarged, and 200 feet of flume have been built on the Victoria ditch, so that in a very short time it is expected that mining work proper will be able to be commenced."

The Finances of Chili.

The message of the President of Chili at the opening of Congress stated "that the revenue for 1895 and the surplus from 1894 amounted to $101,000,000, and the expenditure to $93,000,000. The estimated expenditure for 1896 is $86,000,000 and the estimated surplus $3,000,000. The foreign debt, which in 1891 was £9,000,000, has increased to £18,000,000, including the proposed loan of £4,000,000. In the last five years the expenses of the civil war—$104,000,000—have been paid, the internal debt has been reduced by $45,000,000, and the floating debt by $25,000,000. International claims have been paid to the amount of $2,000,000, and $8,000,000 of guano accounts have been settled. As much as $55,000,000 has been spent on public works, and $41,000,000 of metallic money has been issued. The imports last year exceed those of the previous year by $14,000,000. Measures will be submitted for the protection of national industry and the reform of customs tariffs."

American Trade in Venezuela.

E. H. Plumacher, United States consul at Maracaibo, reports to the State Department that the government of Venezuela has made contracts with William Harper, representing the Philadelphia Museums and American Manufacturing Association, for the establishment of a permanent exhibition of American goods in Caracas, with their own building, and other permanent exhibitions in Valencia, Ciudad, Bolivar and Maracaibo. The purpose of the exhibition is to give the Venezuelans an opportunity to formally inspect and compare our goods with those of the old world. Mr. Plumacher says that Germany, England and France overrun South America with commercial traveling agents, mostly energetic young men well versed in the Spanish language and the customs of South American people. A commercial traveler for an American house is seldom seen in the country. Mr. Plumacher thinks the permanent exhibitions will help American trade, without the great expense attending sending agents to South America.

Increasing Use of Copper.

The London *Statist* says: "Copper seems to be the favorite metal of the day. The consumption could not be greater if they were using it for bicycles, and though the market responds slowly to the ever-increasing demand, it has to keep on rising. The Americans have been rather against it hitherto, partly because it did not quite suit them, and partly because they were skeptical about the ability of European consumers to maintain their heavy purchases of the past six months. Only a few weeks ago the Calumet & Hecla Company sold a large portion of its next three months' output at 11c. per pound. It now regrets the hasty sale, and is out of the market altogether. It will sell no more copper, unless at a considerable advance on previous rates. American shipments are likely, therefore, to fall off shortly, and as they have been the only damper on the copper boom, there will be all the less to hold it back when it is relieved from them. Copper shares are in steadily growing favor, Tintos having at last crossed 23, and Anacondas hovering round 7."

The Scilly Flower Industry.

A correspondent of the London *Times* states that the growing of early potatoes has been completely superseded as the chief industry of the Scilly Islands by the cultivation of the narcissus for the English flower market. Ten or fifteen years ago the narcissus was looked on as an unmitigated pest by the farmers, and cartloads of bulbs were to be had for the asking by the pioneers of the new industry. But now the better sorts of narcissi cost from £1 to £2 per 1,000, and an acre of land takes 400,000 bulbs. About 400 acres are under this cultivation, and the islanders draw about £40,000 a year from this source. Nearly all the potatoes and other vegetables consumed in Scilly have now to be imported. As soon as the forcing of narcissi is over, the houses are filled with tomato plants. A correspondent says that the cost of carriage from Scilly to Penzance is 3s. 6d. per cwt., which is excessive, and he suggests that the steamship service should be bought up and improved by the Great Western Railway Company, which would also develop the tourist possibilities of the island.

Income Tax on Dividends.

The London *Times* says: "A return to the House of Commons gives 'the value of property assessed to income tax under Schedule C for all profits arising from annuities and dividends, distinguishing the amount assessed on dividends from British, Indian, colonial and foreign stocks for the year 1893–94, together with the duty chargeable thereon for the year.' The total amount charged was £38,913,492, yielding £1,125,894 of duty. Of this total £15,106,538, yielding £438,581, represented British securities; £7,856,721, yielding £226,864, Indian securities; £10,457,709, yielding £303,024, colonial securities, and £5,492,524, yielding £157,425, foreign securities. The most remarkable feature in the return is the comparatively small amount charged on foreign securities. No doubt less of these is held by inhabitants of the United Kingdom than was held some years ago, but it is difficult to avoid thinking that a good deal of income from foreign sources escapes taxation. To most people it will be a surprise that for the purposes of this return the Isle of Man is a colony."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

A national presidential convention in the opening week of the between-seasons period of dullness explains the increased restriction in the volume of general trade. In industrial lines there is no improvement. In iron and steel, prices of some varieties tend lower and buyers manifest little interest as to requirements. Present activity among dry goods jobbers is confined to working off odd lots preparatory to stock-taking. Manufacturers of cottons have cut quotations to attract buyers, and while there is increased activity in flannels for fall delivery, recently opened fall prints have found few buyers. The practical end of the strike and boycott at Milwaukee is followed by a threat of iron and steel workers at Pittsburgh to strike if not granted an advance by July 1. The movement of merchandise is smaller in volume than a week ago, greatest activity being shown in hardware, groceries, drugs, paints and clothing. Manufacturers of woolens are reported more hopeful and to be making inquiries as to supplies of raw material, but quotations for wool at the interior are still above a parity with seaboard prices. At eastern centers the lumber trade has been disappointing. At Baltimore general trade is very dull, although some merchants are preparing to send travelers south. Crop prospects in Texas are unfavorable, owing to lack of rain, but quite satisfactory in South Dakota and west into Washington. A feature of the business week on the Pacific coast is that non-union fishermen are supplying the Portland, Ore., canneries with salmon under guard of the state militia. Relatively the most favorable trade report of the week is from Chicago, where inquiry for iron and steel has increased and specifications for work are coming forward more freely. This has created a better feeling and the business outlook there is more favorable. Chicago jobbers in dry goods, clothing and shoes report fair sales for fall delivery, and packers have made heavy sales of hides at the best prices of the year.

Stock values at New York show reaction since the adjournment of the St. Louis convention. Foreign buying was a feature, but on Thursday London sold heavily, and was less bullish on Friday, though again a purchaser. International stocks are the chief objects of interest. Government 4s advanced 1½ per cent. on the adoption of the sound-money plank. Reference to foreign relations in the St. Louis platform have had a tendency to modify the favorable impression created abroad by the Republican party's decision as to the currency. The foreign buyers of stocks supplied the exchange market with bills and depressed demand sterling to 4.88. It has since recovered to 4.88¼ @4.88⅜; $950,000 gold was shipped to Europe early in the week, but none goes out to-day.

Business failures throughout the United States continue to run somewhat above the range in like weeks in preceding years. The total reported this week is 265, compared with 234 last week, 231 in the week one year ago, 195 in the third week of June, 1894, and as contrasted with 360 (nearly 100 more than this week) in the corresponding week of 1893.

There is a moderate increase in bank clearings throughout the United States, which amount to $1,038,000,000 this week, an increase of 10.6 per cent. over the preceding week, but a decrease of 3.5 per cent. as compared with the corresponding week one year ago. When contrasted with the third week of June, 1894, the period of extreme depression after the panic in 1893, this week's increase is 22 per cent.; when compared with the clearings for the like week in 1893 the current week's total is nearly one-half of 1 per cent. larger, and as compared with the like total in 1892 6 per cent. larger. Somewhat more encouraging is the report that prices of only four of the more important staples have reacted this week—wheat, lard, sugar and barb wire. Practically unchanged quotations are recorded for wheat flour, oats, coffee, print cloths, leather, iron and steel, while there are advances for Indian corn, pork, cotton, petroleum and spirits of turpentine.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,020,000 bushels, against 2,922,000 bushels last week, 2,857,000 bushels in the week one year ago, and as compared with 1,927,000 bushels in the third week of June, 1894, and with 3,553,000 bushels in the like week of 1892.

Interest in the forthcoming Canadian elections distracts attention from general trade throughout the Dominion, and there is little likelihood of renewed purchases until after the result is known. Wholesalers at Toronto report rain needed throughout Ontario, with which the outlook for fall trade would be good. Country merchants throughout Quebec are buying for actual requirements only, and wholesale dealers at Montreal in many instances have called in travelers. Business is dull at Halifax. Rains have helped the lumbermen in New Brunswick, and trade in Newfoundland has been stimulated by favorable weather. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $19,090,000, as compared with $20,972,000 last week, and with $22,332,000 in the week one year ago. There are 35 business failures reported throughout the Canadian Dominion this week, as compared with 38 last week, 30 in the week one year ago, 24 two years ago and 20 in the third week of June, 1893.

FINANCIAL.

The Money Market.

Reports are current of a slightly better tone in the New York loan market. This is, on the whole, satisfactory, though the increased activity in speculation has created a better demand for time money, but the supply is still large, and rates remain at 2½ @3 per cent. for short and 3@4 per cent. for long time. Commercial paper is also said to be in better demand, though at the close of the week the buying from out of town appeared to be diminishing. Rates are on the basis of 4@5 per cent. for best names and indorsed bills receivable. Call money has been 2@3 per cent.

Silver.

The recent speculative excitement in silver has died away, but the market has been steady to strong under the continuance of Japanese demand, the buying, however, being conducted so that no decided impression is created thereby. At the end of the week the market was well sustained at a slight advance. Dealings in silver bullion certificates at this city have again become inactive, the trading being in 88,100 ounces, at 68⅞ @68¾c.

SILVER PRICES.

	June 13.	June 15.	June 16.	June 17.	June 18.	June 10.

Foreign Exchange.

London's purchases of government bonds and railroad securities in this market during the early part of the week created considerable pressure on the market. The better feeling in regard to our finances which was shown in foreign financial circles also would seem to have induced some bankers to sell exchange short, in anticipation of a further decline. Under the pressure of security bills, actual business in demand sterling, which was quoted at 4.88½ on Monday, declined by Wednesday to 4.88, plus a commission, the posted figures having been reduced ½c. for both long and short on Tuesday, making the quotation 4.88@4.89. Notwithstanding this decline, $450,000 gold was engaged on Monday and shipped on the following day, and Thursday's steamer to the continent took $400,000 more. These transactions were explained as the closing up of uncompleted orders for specie. On Thursday the foreign selling of stocks was at once reflected by a hardening in the tone of the foreign exchange market, demand sterling rising to 4.88¼ @4.88⅜. On Friday renewed foreign purchases of stocks did not change the tendency of exchange, which was firm, though no gold will be shipped to-day.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

June 13.	June 15.	June 16.	June 17.	June 18.	June 19.
4.88¼ @ 4.89½	4.88½ @ 4.89½	4.88 @ 4.89	4.88 @ 4.89	4.88 @ 4.89	4.88 @ 4.89

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.88½ @ 4.88½	4.88¼ @ 4.88½	4.88¼ @ 4.88¼	4.88 @ 4.88¼	4.88¼ @ 4.88⅜	4.88¼ @ 4.88⅜

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¼ @ 4.87½	4.87¼ @ 4.87½	4.87¼ @ 4.87½	4.87 @ 4.87¼	4.87⅛ @ 4.87½	4.87¼ @ 4.87½

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88½ @ 4.88¾; commercial bills, 4.86¾; francs, 5.16⅞ @ 5.15; reichsmarks, 95¼ @95 11/16.

The Bank of England discount rate remains unchanged at 2 per cent. The bank gained £735,000 in specie during the week ending Thursday last, and its proportion of reserve rose from 59.61 per cent. to 59.95 per cent. In the London open market call money is ¼ @½ per cent., and discounts steady at 11/16 @¾ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending June 12, 1896:

	1896.	1895.
Dry goods	$1,381,120	$1,803,073
General merchandise	7,651,627	7,526,952
Totals for the week	$9,032,747	$9,330,925
Previously reported	221,050,030	232,456,607
Since January 1	$230,088,777	$241,[illegible]

The exports (exclusive of specie) from New York to foreign ports for the week ending June 10 were $597,106 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,018,123	$7,149,575
Previously reported	171,690,751	156,057,499
Since January 1	$179,708,874	$163,207,074

Imports and exports of the United States for the month and eleven months ending May, 1895 and 1896 (preliminary figures for 1896, corrected to June 13, 1896):

The New York Banks.

The Sub-Treasury was a creditor at the Clearing House last week to a small extent, and gold shipments continued on a limited scale. On the other hand, money continued to come from the interior, and the bank statement issued last Saturday shows a gain of over $2,100,000 in cash holdings. Loans decreased $2,540,000, and deposits were reduced $350,000, the effect of the other changes being seen in an increase of $2,190,750 in surplus reserve. The figures of the statement compare as follows with those of the preceding week:

	June 13, '96.	June 6, '96.	Changes.
Loans	$474,278,300	$476,819,100	Dec. $2,540,800
Specie	[illegible]	51,[illegible]	Inc. [illegible]
Legal tenders	82,489,500	80,972,800	Inc. 1,510,700
Deposits	496,829,400	497,1[illegible],000	Dec. 350,600
Circulation	14,510,900	14,725,300	Dec. 214,400
Total reserve	144,884,400	142,781,300	Inc. 2,103,100
Reserve required	124,207,350	124,[illegible]	Dec. 87,[illegible]
Surplus reserve	20,677,050	18,486,300	Inc. 2,190,[illegible]

At the corresponding date last year the surplus reserve was $37,958,900, against $76,376,575 in 1894.

The Boston Banks.

	June 13, '96.	June 6, '96.	Changes.
Loans	$162,[illegible]74,[illegible]	$162,927,000	Dec. $253,000

THE STOCK MARKETS.

The New York Stock Market.

The adoption of a sound-money plank by the Republican National Convention has given a stimulus to speculation and induced a buying movement that tended to carry stock values above their recent level. The event in question has indeed overshadowed all other factors in its influence upon the stock market. It cannot be said that public interest has been aroused to any great extent, though there is some improvement in that respect. Professional traders, however, have generally turned to the bull side, and cliques have been active in advancing various portions of the share list. London's reception of the news from St. Louis has indeed been one of the principal influences. Steady buying from that quarter went on during the early part of the week, and the extent to which Wall street was governed by the foreign participation is shown by the fact that on Thursday a decided appearance of selling for London caused a complete halt in the bull movement. This check was partly due to realizing sales by the professional element in London, which, as is the case here, seems thus far to have had the American market all to itself. It would also seem that the references to this country's foreign relations embodied in the St. Louis platform had for the time an unfavorable effect on foreign financial and speculative sentiment, though this feeling was temporary, and on Friday not only did the London market for American stocks show a renewal of the advance, but further foreign buying gave renewed confidence to the local bulls. There is some question as to whether on balance Europe has taken a large amount of our securities. The decline of exchange rates, due to the European purchases of stocks, was, however, one of the favorable elements. Quotations for demand sterling bills fell under this pressure to 4.88@4.88¼, which is below the rates at which gold can be exported, and the $950,000 gold sent out on Tuesday and Wednesday seemed to be the completion of outstanding arrangements of that kind. The short interest in the market was well nigh eliminated early in the week, and the bears were exceptionally cautious about selling stocks for the short account. The limited supply of floating shares in the speculative list was very noticeable, and accounts for the ease with which prices in many cases advanced on small buying orders. At the same time, it must be admitted that much of the buying was by small traders, and resulted in a considerable volume of stocks being loosely held, as was shown by the extensive liquidation on the part of such interests on Thursday, when London changed its attitude and sold our securities. One of the best features of the market was the advance in government bonds which followed the assurance that the upholders of the gold standard would win at St. Louis. The new United States 4s, which were quoted at 116¾ on Monday, advanced to 118¼ by Wednesday, buying by prominent bankers supposed to be acting for foreign account clearing the market of all offerings. The stocks having an international market were naturally leaders in the advance, the course of St. Paul and Louisville & Nashville being typical. Some bond issues which are in favor abroad, particularly those of the new Atchison Company, also shared in this influence. The whole list, however, was more or less affected, though the industrial stocks were not quite as prominent as usual, and Sugar, usually the leading vehicle of speculation, hung back somewhat, while at the close of the week Tobacco had a sharp advance on rumors of an increased dividend. The tone of the market at the close on Friday was dull, but strong at a recovery from an early decline.

Boston Stock Market.

There has been a fair amount of business in stocks, with prices generally steady. Railroads show improvement, Atchison closing ¾ point higher, while Chicago, Burlington & Quincy advanced 2½ points, with quite liberal transactions. New York, New Haven & Hartford has declined 1¼ points, but West End Railroad advanced 2½ points. Boston & Montana advanced 3 points, with active trading, while Sugar is fairly active and values ⅝ point lower. United States Leather was dull and values are weaker.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending—Price June 18, 1896.	*Price June 11, 1896.*	*Sales June 18, 1896.*	*Sales June 11, 1896.*

* Pittsburgh.

THE DULL SEASON.

A SMALLER VOLUME OF GENERAL TRADE IN NEARLY ALL LINES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, June 19.—The volume of business continues quiet in all lines of trade, while the local holiday, June 17, tended to make operations slow. The money market continues quiet and rates are a little more firmly held. Call money ranges from 3½@4½ per cent., with time money at 4@5½ per cent. as to time wanted, while mercantile paper is quoted at about 4½ per cent. The boot and shoe market is quiet, but the factories are in good shape, as a rule, regarding orders booked, and values are firm, particularly for the cheaper grades of men's-wear heavy goods, that opened very low, an advance at 2½@5c. being asked. Leather is quiet, but the market is held firm, while the surplus supplies have become considerably reduced. Hides are quiet but firm. Iron and steel rule quiet, but the pools hold prices steady on general material. Lumber is quiet and trade disappointing for the season. Coal is quiet, but values hold steady.

Providence, June 19.—General business continues quiet. There is no improvement in the manufacture of cottons or woolens, and the trade say there is "no money either in stopping or running." Manufacturers of silverware are curtailing production.

Philadelphia, June 19.—Wool sales are light; arrivals are moderate. Very little is doing in dry goods. Increased orders for boots and shoes have been received from out-of-town buyers, and the outlook is favorable for a good fall trade. Sugar is steady at present, but has fluctuated 1/16c. several times. Drugs, paints and glass are only fairly active. Iron is still depressed; prices weak.

Pittsburgh, June 19.—A slight increase in local trade is noted. The boot and shoe business is satisfactory, and there is considerable being done in dry goods. A steady demand for groceries is noted, and prices are fairly well maintained. Collections continue about the same as last week, though in some instances improvement is reported in the collection of country accounts. The raw iron market has given no indications of improvement, and few sales are reported at present quotations, which have not changed. The demand for finished material is fair, but there is apparently no demand for raw material.

Baltimore, June 19.—The between-season's dullness is now in full swing, and but little is being done. Boot and shoe and clothing trades have traveling men out and report a fair number of orders. Dry goods and notion houses are preparing samples for the far southern trade, and their representatives will soon start. Representatives in other lines report trade quiet and collections fair.

West and Northwest.

Cleveland, June 19.—General business continues inactive and without specially new features.

Detroit, June 19.—Trade in general lines is showing only a fair average. Collections are reported still slow, and orders for fall goods are not up to expectations.

Chicago, June 19.—Iron manufacturers report an increase in the general inquiry and specifications are coming forward more freely, making the situation brighter than of late. Sales of pig iron have increased, but they are only in small lots, and prices are fairly maintained. Bar iron and light hardware are holding their own, with fair sales. Orders for fall dry goods, clothing and shoes are being taken to a fair extent, and sales show a slight increase for the week. Heavy sales of hides by packers at the best prices of the year—8½c. for native steers and 8¼c. for Texas—have given the leather market a better tone, and a fair inquiry is reported. Building materials are moving moderately, and trade generally is in about the same condition as for several weeks past. Potatoes have declined, owing to enlarged offerings, but the produce trade, on the whole, shows little change. Wool receipts, 1,507,466 pounds. Money is easier and slow, with the principal demand from packers. Collections are fair.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JUNE 6, 1896, TO JUNE 12, 1896, INCLUSIVE.

Louisville, June 19.—Only a moderate movement is noticeable in general merchandise. Retailers are having a fair business. There have been large receipts and sales of leaf tobacco at satisfactory prices for best grades.

St. Louis, June 19.—Operations in nearly all lines are conducted conservatively, there being a decided tendency to order for immediate wants only. Even staple boots and shoes, hats and caps, dry goods and groceries are ordered more sparingly than heretofore. The wool clip continues light, with a healthy market for nearly all kinds. Leather conditions are unchanged, the demand being fair and values firm. Barbed wire is still weak, with a likelihood of a further drop. Pig iron is dull and stocks are accumulating at the furnaces. Building materials are still in strong demand. Iron bars are unchanged. Sheets are lower but inquiries more numerous. Collections are only fair, but bankers say counter transactions show improvement, and bank clearings for past week are about the same as at same period of last year, which has not been the case for several weeks.

Kansas City, June 19.—Wholesale and retail dealers in all lines report quiet trade for the past week, with slow collections.

Milwaukee, June 19.—Trade seems to have revived somewhat, and prospects appear more favorable, the strike and boycott being practically at an end. Collections continue rather slow.

St. Paul, June 19.—Trade holds up well in hardware, groceries and drugs, while it is naturally dull in dry goods, boots and shoes and hats and caps, except for sorting-up orders. Dealers are buying winter goods quite freely. Collections continue for the most part satisfactory, but are expected to show a falling off from now on.

Minneapolis, June 19.—The trade situation shows no special features this week, movement of merchandise being confined very largely to staples.

Omaha, June 19.—Trade in groceries this week has been good, but in other lines it is at a standstill. Collections are very hard to make.

Sioux Falls, June 19.—Trade is quiet with both jobbers and retailers. Seasonable weather and fine prospects for crops continue. Collections generally are reported good.

Southern Cities.

Charleston, June 19.—Business in all lines is quiet. Collections are very slow.

Savannah, June 19.—Wholesale and retail trade very quiet for the week, but collections are fairly good. Spirits of turpentine advanced ¼c., with a big demand. Receipts are steady, with a firm market.

Atlanta, June 19.—Trade is quiet; collections fair.

Augusta, June 19.—Business is quiet in all lines, retailers complaining of dullness and poor collections. Crop conditions are favorable.

Savannah, June 19.—There is but little change over last week's trade, but collections are better, especially country. Vegetables are moving freely.

Birmingham, June 19.—Trade is dull and collections are slow.

Chattanooga, June 19.—Trade is quiet. Factories are busy, and the feeling in that line is good. Collections are fair.

Memphis, June 19.—General trade shows no improvement during the week. Collections are only fair.

Nashville, June 19.—Business, as a whole, remains quiet. Some liberal orders have been received from southern points, but there is no general movement all along the line. Merchants in cotton section feel that there will be good results this fall. Payments continue fair.

New Orleans, June 19.—The jobbing trade is under the average for the season. Cotton is moving quietly. Sugar and rice are dull. Crop conditions are favorable. Exports of grain are light.

Galveston, June 19.—Trade conditions remain unchanged. Reports from the interior concerning the corn crop are very discouraging, while cotton has yet a fair chance for an average crop if it gets rain soon.

Pacific Coast.

San Francisco, June 19.—The general trade condition is unchanged. Freights are firm and collections slow.

Portland, June 19.—Non-union fishermen are now supplying the canneries with salmon, as they have at present the protection of the Oregon national guards. Wool and lumber are inactive, and fruit is high because of a late season and frosts. Collections are slow in the city, but are reported somewhat better in the country.

Tacoma, June 19.—There is no marked improvement in trade.

Seattle, June 19.—Trade conditions are favorable and improving. Collections are rather easier. Crop reports continue satisfactory.

Canada.

Toronto, June 19.—General trade is quiet and featureless. The interest in the elections is keen, and business is neglected in consequence. The outlook is favorable for autumn business, but rain is needed for the crops.

Montreal, June 19.—Business is at a standstill, except for actual requirements. This is caused by the approaching political crisis, voting taking place on the 23d. Many travelers have been called in, and those out are reported doing only fairly well. The recent bank statements show their earnings power to be fairly well maintained, but all point to the necessity of increased reserves.

Halifax, June 19.—General trade is very dull. The cause is attributed to Dominion elections, and no improvement is looked for until they are over. Heavy rains have greatly benefited lumbermen, especially in New Brunswick. More favorable weather has stimulated business in Newfoundland.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Dry Goods.

The market continues quiet, with business confined to clearing up lots at low prices and getting ready for semi-annual stock-taking the last of this month. Jobbers are working down their supplies on this account, and are, as yet, making but little preparations for fall. Cotton fabrics are dull and depressed, and in order to attract buyers very low figures have to be named. Some business is being done in this way, but improvement does not develop. Fancy prints have been opened in dark styles for fall at 5c., but few have been bought as yet. Ginghams are dull and only appear to sell through the aid of drives. The Lancaster and Amoskeag companies have advanced their price to 5c. Dress woolens are dull, with business very slow and unsatisfactory. There is more activity in flannels, which are being taken for fall at low prices. Men's-wear woolens are dull and featureless.

Wool.

The volume of trade continues quiet, but the tone is more hopeful, and manufacturers are showing more interest in the market. As yet it has been shown by more buyers looking around and buying samples. Some bids on lines of wool are being made, but the buyer is careful to offer less than the market, and, as the situation now looks, holders will go no lower. At ruling market rates considerable wool could be picked up, although the wools could not be replaced at seaboard prices. The country is firm, and business doing there in new wools is above the parity of prices ruling at seaboard markets. Fleece wools are very strongly held by growers in Ohio and Michigan, but dealers here find little call, and prices are entirely nominal on the basis of 17@18c. for Ohio XX and XX and above. Territory wools are dull on the scoured basis of 30c. for fine medium and fine, with courser wools ranging lower. Australian wools are dull, with prices held steady. Carpet wools quiet.

Cotton.

The exports of raw cotton during May and the nine months ending May 30, 1896, with comparisons for similar periods in 1895, were as follows:

MAY.	*Bales.*	*Pounds.*	*Values.*
1896	173,329	87,453,748	$7,186,613
1895	304,540	152,950,347	9,837,301
NINE MONTHS ENDING MAY 30.			
1896	4,423,498	2,217,512,304	$181,625,586
1895	6,616,133	3,343,946,051	192,751,257

Petroleum.

Exports of mineral oils and its products during May and the eleven months ending May 30, 1896 and 1895, were as follows:

MAY.	—1896— *Gallons.*	*Values.*	—1895— *Gallons.*	*Values.*

GROWTH OF THE COTTON TRADE.

The Chattanooga *Times* says: "'The south appears not to be afraid of overdoing the cotton manufacturing business,' says the Louisville *Courier-Journal*, 'as new mills are being chartered almost every week. According to the figures of the *American Wool and Cotton Reporter* more than 100 cotton mill companies have been organized and chartered since January 1, 1895. Most of these have been in the Carolinas and Georgia. As there is another great cotton crop in prospect these new concers ought to start off with a good season. If the south is to continue the heavy production of the past few years, the only way in which it can prevent financial distress is by working up the raw material at home. This being done, there need be no alarm over possibly 10,000,000 or 12,000,000 bale yields. Five-cent cotton cannot stand the present costly system of handling by which each bale is made to pay $2.50 to $3 in needless commissions and expenses, but it can be made up at home and add enormously to the wealth of the producing section.'

"One of the great advantages the south enjoys in the cotton trade is in what may be called the diffusion of the mills. There are no great 'cotton mill centers' in the south that, like Lowell and Fall River, hold the bulk of the trade, as those do in New England. We have Augusta and Columbus, Ga., and Aiken county, S. C., but the three don't represent 20 per cent. of the southern trade in capital, output, etc. The business in the south has not congested the labor market at any place as yet. The tendency is steadily toward keeping the trade scattered. This insures a more certain and economical covering of the southern market for fabrics. It goes far toward making the labor more contented and efficient. It utilizes large numbers of laboring people at their homes, not a trifling advantage. We know of mills in the south employing large numbers of help, and it was essentially all found right there, native and to the manor born. This is radically different from the New England condition. There the mills are huddled into a half dozen towns as to 90 per cent. of them. The help is nearly all foreign; it has no sympathy with the owners of the mills, is almost invariably sullen, truculent, resentful of even a suggestion from a foreman. Such labor is not organized so much for the protection of its rights as it is for the making of war on the dominant element of society in the matters of wealth and culture. It is ready to strike always, though it must be said to its credit that New England cotton-mill labor has behaved remarkably well of late years in remembering its own best interests. The leaders have learned a little in the dear school of experience.

"To revert to the southern trade. The three mill towns mentioned have grown little in spindles in the last five years, whereas the number of spindles in the south have expanded enormously, from 1,725,000 in 1890 to 2,433,000 in 1894, a growth of 704,000 in four years, while the whole north added but 975,000 spindles in the same years.

"No industry in the United States ever had a growth that was at once so rapid and so healthy and solid as the southern cotton trade has developed."

GERMAN AND BRITISH COLONIES.

The London *Times* says: "An American living in Germany writes to say that he has often wondered at the great want of practical sense prevailing there in regard to Germany's colonial policy and her relations to England as affected by the Transvaal affair. There is, however, one notable exception to the prevalent attitude of the press; this is the *German Economist (Der Deutsche Oekonomist)*, a leading financial organ. A recent number contains an article overhauling the colonies and the commercial and political relations of the empire to England. It points out that the trade of Germany with such insignificant countries as Peru (£670,000), Uruguay (£840,000) and Bulgaria (£820,000) is much greater than that with all her colonies. In sharp contrast with this, the *Economist* places the trade of Germany with England and English colonies in 1893 as follows:

	Imports from.	*Exports to.*
England	£32,870,000	£33,665,000
English colonies	15,105,000	4,545,000
Totals	£47,975,000	£38,210,000

"Germany's trade with her African colonies is only 10 per cent. of her trade with all Africa, and is much greater with the English colonies there than with her own.

"The article then calls attention to the trade with the Transvaal (only £225,000 in 1894), and says it 'is not so much as a tenth of 1 per cent. of our entire foreign trade. It seems very necessary to impress this fact with all earnestness upon the minds of our people and our rulers, since a part of our press is strongly bent upon drawing us into an ugly conflict with England on account of the Transvaal. As if our trade with the Transvaal were endangered by England's policy! But that is far from being the case, for England does not maintain a protective tariff for her own benefit in a single one of her colonies. Where such tariffs exist they are directed primarily against English industry, and imports from Germany are treated upon just as favorable or unfavorable a hasis as those of England, and there is not the slightest reason to believe that this state of things would be changed if England should carry out her will in regard to the Transvaal. * * * A war with England about the Transvaal in order to place the Transvaal in a position to refuse to the Uitlanders the political rights advocated by England would indeed be absurd. * * * The danger lies in the nagging articles in the press on both sides. Out of diplomatic and journalistic chatter a situation may arise which permits only one of two courses—either a ridiculous retreat or a foolhardy advance. And to this result the traditional foes of Germany, who rejoice at every one of our embarrassments and would gladly deprive the Triple Alliance of the necessary flank support of the English fleet in the Mediterranean, are contributing with assiduity.'"

MEETING OF THE SUEZ CANAL COMPANY.

The Glasgow *Herald* says: "In connection with the annual meeting of the Suez Canal Company to be held in Paris to-morrow, the British Foreign Office has issued the usual comparative returns of the canal traffic. It is an eminently satisfactory document, showing that the popularity of this short cut to the East goes on increasing. During its opening year (1869) only ten vessels, with a net tonnage of 6,576, passed through the canal, bringing in 54,460 francs of transit receipts. Last year the vessels had increased to 3,434, the tonnage to 8,448,383, and the transit receipts to 78,103,717 francs. As indicating the size of the vessels using the canal now and then it may be mentioned that while the mean net tonnage per vessel was 657 in 1869 it was 2,460 in 1895. The traffic has naturally undergone some ups and downs since the waterway came into existence twenty-seven years ago, but on the whole it has been marked by great prosperity. More particularly is this the case in recent times. For example, the net tonnage for 1895 exhibits an increase of 408,208 tons as compared with that of 1894, and of 788,315 tons as compared with that of 1893. In the same way the amount of dues has risen by 4,326,890 francs as compared with 1894, and by nearly 8,000,000 francs as compared with 1893. The number of vessels flying the British flag continues to form the great majority of those passing through the canal. Out of the totals of 3,341 in 1893, 3,352 in 1894, and 3,434 in 1895, the British vessels were respectively 2,405, 2,386 and 2,318. Though the number of British ships has thus gradually fallen, this is entirely due to their larger size, the actual tonnage having risen from 5,752,934 in 1893 to 5,996,796 in 1894 and 6,062,587 in 1895. On the other hand, the percentage of British vessels and their tonnage has somewhat declined in 1895, being 67.5 and 71.8 respectively as against 71.2 and 74.6 in 1894. Both France and Italy sent more tonnage through the Canal last year, a circumstance that may be traced to the passage of transports in connection with the expeditions to Madagascar and Abyssinia. When we come to consider the question of merchant liners alone, the comparison is all in favor of the British—fully 79 per cent. of the number and 83 per cent. of the tonnage having belonged to this country. Germany possessed only 7.1 per cent. of the mercantile marine tonnage, while France, Holland, Norway and Sweden combined furnished 7.5 per cent. of the tonnage. As to passengers, the development in this respect has been on an enormous scale. During the opening year only some 26,000 passengers were carried through the canal, and 1880 had been reached before the number increased to 100,000. Last year the total was 216,936. Of these 118,635 were troops—much greater, for the reason already referred to, than the usual average. The civilian passengers came to 74,878, and pilgrims, emigrants and convicts to 23,423. Vessels continue to navigate the canal by night as well as by day. Notwithstanding this, however, the mean duration of the passage has been materially decreased, a fact which indicates that the duties of the transit department are carried out with energy and efficiency. It is gratifying to add that the directors are enabled, while proposing a dividend of 74½ francs—or with interest of 92½ francs net—to assign 3 per cent. to the reserve fund, and to increase the annual allotment for renovaton. The only other subject likely to occupy the attention of to-morrow's meeting has reference to the cost ot the new works for the present year. As, however, the balance from the last issue of obligations is sufficient to meet any such outlays, the matter need not give rise to much discussion."

THE MINERS' CONGRESS.

The London *Times* writes: "The International Miners' Congress has voted in favor of establishing a legal eight-hours' day. The new unionists will, no doubt, make the most of their victory at Aix-la-Chapelle, and a considerable victory it is. * * * That hours of labor should be reduced was taken to be self-evident. Even Mr. Burt and his colleagues, who were adverse to state interference, assumed this, and merely protested against the notion that organization and union could not do for miners all that the state could do. * * * Of the larger aspects of the question—the effect upon society and industries other than mining, the possibility of the enactment of an eight-hours' day being practically nugatory—nothing apparently was said or thought. * * * Limit the hours of work among miners, contract the output and increase the price of coal, and ironworkers, and, indeed, members of all the great industries of the country, are at once affected. Capital may be injured, but the blow aimed at it must also strike labor. * * * Members of other trades have as much right to an eight-hours' day as miners. Their victory might be followed by like victories on the part of other workmen, and it has never been made clear to dispassionate observers that the last state would be much better than the first, even for miners themselves, if there was a reduction in the output of industry all round. It is not apparent to the wisest heads how, if every one is to work less, he is also in the long run to earn more or even as much.

"A resolution in favor of prohibiting women from working in and about mines was carried unanimously. With the propriety of such a course we have at present nothing to say. No doubt evils are to be found wherever women are engaged in this sort of toil, and it is notorious that in some foreign mines linger barbarous practices of which we in this country now know nothing. But the matter is of vital consequence to the women themselves. They are by no means willing to be expelled from positions in which they earn their bread. * * * The largest lockout of workmen ever contemplated by capitalists has been insignificant in comparison with the lockout of women from industry to which some unionists coolly and proudly look forward. * * * Mr. Burt must be well aware of the puerility of certain of the doctrines which took the fancy of some of the delegates at Aix. He must know that the miners might as well try to fix a minimum duration of life as a minimum wage; and we are disappointed that the congress has concluded without a protest from him or any other English representative against entering on the path of state socialism along which some of the foreign delegates would hurry their class. * * * It is a pleasure to turn from the proceedings at Aix to those at the Coöperative Congress at Woolwich. The resolutions passed at the latter were much more modest, and dealt with smaller questions than those summarily settled at Aix. But the coöperators mean business, and we cannot be sure that some of the international delegates mean more than agitation. The coöperators spoke about what they knew. They could appeal to a long series of successes, and they put their trust in energy and honesty of purpose and self-help, whereas the congress at Aix has faith in the agency of law—that is, to force, more or less disguised, and coercion of the minority."

CATTLE PLAGUE IN SOUTH AFRICA.

The London *Times* says: "There can no longer be any doubt that the disease which has attacked the herds of cattle in Rhodesia, Bechuanaland and some portions of the Transvaal is the same terrible scourge which has already devastated wide regions of Eastern and Central Africa north of the Zambesi. The Matabele rising was almost contemporaneous with the measures adopted by the local authorities to stamp out the plague, and subsequent inquiry will most probably elicit the fact that the precautionary measures which the authorities felt called on to adopt were the main factors in inducing the Matabele to revolt. It can scarcely be wondered at if the natives were unable to appreciate the necessity for the wholesale slaughter of apparently healthy cattle simply because they had been in contact with infected animals, and this, to the native mind, wanton slaughter of apparently sound animals must inevitably have given rise to the most alarming and suspicious rumors as to the intentions of the white men. But, apart altogether from the influence which the cattle plague may have had in inducing the native rising, it is in itself a matter of the very gravest concern. How real the danger still is has scarcely yet been sufficiently recognized in this country, but a moment's consideration will show that in a country without railways, where almost the entire transport system is dependent on oxen, an epidemic among the cattle must rob the inhabitants of much more than one of their principal sources of food supply. Many travelers have sent home accounts of the ravages of the disease in the heart of Africa. As far back as November, 1892, Captain Lugard had drawn attention to the immense importance of a scientific inquiry into the nature of the disease, and of attempting to discover a remedy. At a meeting of the Royal Geographical Society he stated that 'no such epidemic has visited Africa within the memory of man, though the plague of some thirty-five years ago worked a great destruction. Its action appears to have been extremely rapid—a violent purging, debility, death.' And he added, 'As the disease is still spreading, I believe, to north and south, it would be a matter of enormous, almost incalculable, benefit to the natives were some means found to arrest its progress, and would save thousands of lives among the pastoral tribes.' Had the warnings more than once uttered—notably by Captain Lugard—been heeded, it is at least probable that the march of the plague southward might have been arrested before it had crossed the Zambesi. As it is, every mail brings proof that the area of infection is enlarging, and it is to be feared that we are not yet in a position to reckon up the full consequence of this disastrous visitation. The foreign secretary of the London Missionary Society has issued an appeal for help to meet the pressing needs of the starving people in Khama's country."

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

REORGANIZATION.

NEW YORK, PHILADELPHIA AND BERLIN, June 12, 1896.

Pursuant to the provisions of page 13 of the plan of reorganization, we hereby give notice that on and after June 23, 1896, we shall be prepared to pay in cash at either of our offices the following sums on bonds deposited under said plan, viz.:

4 % on General Second Mortgage Bonds,
3 % on General Third Mortgage Bonds,
3 % on Dividend Certificates,
1½ % on Consolidated Mortgage Bonds.

Holders of Reorganization Certificates or Receipts must present same at one of our offices, in order that a record of such payments may be stamped thereon.

J. P. MORGAN & CO.,
23 Wall Street, New York.

DREXEL & CO.,
Fifth and Chestnut Streets,
Philadelphia, Pa.

DEUTSCHE BANK,
Berlin.

TO THE HOLDERS OF
Reorganization Certificates or Receipts
for Preferred and Common Stock
OF THE

Northern Pacific Railroad Co.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA AND BERLIN, June 5, 1896.

Pursuant to the provisions of said Plan and Agreement, notice is hereby given that the second instalment of

$3.00 per share in respect of Preferred Stock, and
$5.00 per share in respect of Common Stock,

on account of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on June 26, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates, or receipts, must be presented so that such payment may be endorsed thereon.

TO THE HOLDERS OF

General First Mortgage and Land Grant Bonds

OF THE

NORTHERN PACIFIC RAILROAD COMPANY.

Holders of over a majority in amount of the above described bonds having deposited same for conversion, on the basis set forth on page 12 of the plan and agreement of reorganization dated March 16, 1896, all other holders of such bonds who desire to avail of the privilege of conversion on the above basis are hereby notified to deposit their bonds at either of our offices on or before June 30th, 1896.

Reorganization Certificates will be issued for bonds so deposited.

The basis of conversion is 135 per cent. in the new 4 per cent. Prior Lien Bonds of the reorganized Northern Pacific Railroad (on which interest from July 1st, 1896, shall be adjusted quarterly in cash), with 3 per cent. in cash payable now on the old bonds for the interest due July 1st, 1896.

On July 1st, 1896, the basis for conversion of bonds not previously deposited will be reduced from 135 per cent. to 132 per cent.

Notary Public, New-York City and County.

Oregon Improvement

REORGANIZATION.

NEW YORK, BOSTON, May 29th, 1896.

To Holders of Certificates of Deposit representing bonds or stock of the Oregon Improvement Company deposited with the MANHATTAN TRUST COMPANY, New York, or the OLD COLONY TRUST COMPANY, Boston, under a preliminary agreement dated October 8, 1895, between such holders and the undersigned Committee, and to

Holders of First Mortgage Bonds,
Consolidated Mortgage Bonds,
Preferred Stock, and
Common Stock
of the Oregon Improvement Company.

The undersigned, who were appointed a Committee for the purpose, have perfected a plan for the reorganization of the Oregon Improvement Company, which has been accepted by the holders of a large amount of all classes of bonds and stock.

Copies of said Plan may be obtained on application to the MANHATTAN TRUST COMPANY, No. 10 Wall Street, New York City, or the OLD COLONY TRUST COMPANY, Ames Building, Boston (with each of which Companies is lodged a duplicate Agreement of Reorganization), or will be mailed to any holder of bonds or stock sending his address to either of said Trust Companies.

This plan provides for the issue of the following new securities:

1. First mortgage 5% 50-year gold bonds. $5,000,000
2. Four per cent. non-cumulative preferred stock..... 5,000,000
3. Common stock..... 9,000,000

FINANCIAL.

By the terms of the Plan,

First mortgage bondholders receive in cash an amount equal to the coupons on such bonds maturing June 1, 1896, to wit, $30 per bond, and 110 per cent. of the principal of such bonds in new five per cent. bonds, bearing interest from June 1, 1896.

The new first mortgage bonds not set aside for the present firsts are to be issued at no greater rate than the rate of $100,000 par value of bonds per annum, and only for the purchase of new steamships and other needed property, which is to be added to the security for such bonds.

Holders of consolidated mortgage bonds who pay 12½ per cent. of the principal thereof, to wit, $125 per bond, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of the principal of such bonds in new preferred stock and 75 per cent. thereof in new common stock.

Holders of preferred stock who pay 12½ per cent. of the par thereof, to wit, $12.50 per share, in five equal instalments, in accordance with the Plan, receive 62½ per cent. of par in new preferred stock and 75 per cent. of par in new common stock.

Holders of common stock who pay 10 per cent. of the par thereof, to wit, $10 per share, in four equal instalments, as provided in the Plan, receive 10 per cent. of par in new preferred stock and 50 per cent. of par in new common stock.

First mortgage bonds should be deposited, or if already deposited under said preliminary agreement of October 8, 1895, the certificates held therefor should be exchanged for reorganization receipts or certificates, at one of said Trust Companies, ON OR BEFORE JULY 1, 1896. On making such deposit or exchange the holders will receive in cash an amount equal to the interest coupons thereon maturing June 1, 1896, to wit, $30 per bond.

Consolidated mortgage bonds and preferred and common stock should be deposited, or if already deposited under said preliminary agreement, the certificates representing the same should be exchanged for reorganization receipts or certificates, at one of said Trust Companies on or before July 1, 1896.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JUNE 27, 1896.

Political conventions have been a feature of the past week. In accordance with expectations, the Democrats of New York have come out against free-silver coinage, in a platform which appears to have met with practically unanimous support from the delegates attending the convention. After stating that the efforts of the government should be steadily directed to the establishment of a safe system of bimetallism, the platform expressly declares that without international agreement such a system could not be maintained by this government alone, and that any attempt of this government to alone establish and maintain such a system would be folly. The Democrats of New York are pledged by the platform to opposition to the free and unlimited coinage of silver, and the rigid maintenance of the gold standard until international coöperation for bimetallism can be secured. The platform further calls for the gradual retirement and cancellation of the greenbacks, and opposes the repeal of the existing statutes which enable the Secretary of the Treasury to provide adequate funds for the redemption in gold of the government's paper obligations. Adherence to the principle of a tariff for revenue only is reiterated, and the administration of President Cleveland is indorsed.

The results of the Democratic conventions in the other states have been already foreshadowed. The Ohio, Indiana, Illinois and Texas conventions have declared unreservedly for free silver coinage and against the gold standard. At all of these conventions the opposition to the present national Democratic administration was freely voiced, and with such bitterness as to lead to the impression that some of the warmth of expressions for free coinage was due to antagonism to the present administration. The Democrats of Wisconsin have joined those of New York in instructing the delegates for a gold standard. All of the states have now elected delegates to the Chicago convention, the last to do so being North Carolina and Georgia. These states have declared for free coinage, and with Texas, in which the sound-money men have bolted to the silver column, will give a total of not far from 590 delegates to the Chicago convention for silver. The silver men will require about 620 delegates to nominate a candidate, unless the two-thirds rule, which has been in active operation in Democratic conventions for over sixty years, is abrogated. In default of revolutionary action at the convention, it will, therefore, be seen that the nomination of a pronounced free-silver candidate for President is out of the question.

Among the items of interest in financial circles this week was a report that foreign bankers are inclined to believe that the gold export movement for the present season is approaching, if it has not yet reached, its termination. The period for extensive grain and cotton shipments is now at hand, and the view in question finds support in the appearance in the foreign exchange market of a better supply of commercial bills on Europe, drawn in connection with export business of various kinds. Europe has not been attracted to purchase our securities in the stock market, its dealings in that quarter being confined to professional operators in London who trade "in and out." Their participation creates no supply of exchange, and it is, therefore, significant that the foreign exchange market, in the face of a fair demand for remittances, should have shown a declining tendency during the week. Although current quotations are thought to be under the level at which gold could be profitably exported, some $950,000 has been shipped to Europe since last Saturday, making the total outflow since the present movement began in April about $27,170,000.

In the stress of political activity at Saratoga, but little attention has been attracted by the meeting there of the twelfth annual Convention of the Chiefs of Labor Statistics this week. The most important matter which came up for consideration was the best method of investigating the subject of municipal ownership of water, gas and electric light plants. After the topic had been discussed at length by the members of the convention, that body passed a resolution declaring that it was expedient for the officers of the convention to undertake such an investigation. The result which will be reached as the outcome of a general investigation of the subject will have a value which would be increased if the members of the convention would include in their investigation the subject of municipal control of the means of transportation, so far as data in reference to that subject are available.

Preparations are being made for the initiation by the forestry commission, appointed some time ago, of its work of investigating forestry problems and outlining an administrative policy on the subject. It is understood that the investigation will begin in Montana, and will be extended into the states of Idaho, Oregon, Washington, California and Colorado, and the territories of Arizona and New Mexico. The work is expected to take up the time of the commission during the summer and autumn, at the end of which latter season the work of preparing a report for submission will be undertaken by the commission. There will be a preliminary meeting at Chicago early next month, at which the plans of the commission in detail will be formulated.

The Postmaster-General continues to issue statements giving the statistics of receipts for the principal post offices of the country. The statement for May, which covers the receipts of the thirty largest post offices, shows a slight increase in revenue over the corresponding month of last year. The receipts for May, 1896, for the thirty offices in question, amounted to $2,663,521, as compared with $2,636,403 in May, 1895, a net increase of $27,118. New York leads as regards the amount of receipts, Chicago being second, and Philadelphia, Boston, St. Louis, Cincinnati and Brooklyn following in the order named. Several of the cities included in the report show decreases as compared with May, 1895—a circumstance which is regarded as indicating a falling off in business at those cities.

The result of the Canadian elections this week appears to have been a surprise to even the most ardent Liberals, who, for the first time in eighteen years, and for the second time in the history of the Dominion, have been returned to power. The completeness of the victory which they have won can only be explained on the ground of a great popular uprising, the causes of which are to be sought for in several directions. Late press advices are to the effect that the present government will be met with an adverse vote of fully fifty, and that the Liberals have a straight majority over all parties in the Dominion of at least thirty. Some changes which are regarded as surprising have occurred in the different provinces. The attitude which the Conservative government took regarding separate schools in Manitoba does not altogether explain the revolt which has occurred. The question of the tariff appears to have been a notable issue in Canada this year, as has also the question of administration of executive departments of the Canadian government. There is little doubt, however, that the trade depression of the last few years has had an effect, similar to that already noted in the United States, in creating a feeling of discontent with the party in power. Another feature of the election has been the practical unanimity with which the large cities are reported to have voted against the government. The present outlook seems to favor the formation of a Liberal ministry, headed by Mr. Wilfred Laurier as premier. If this proves to be the case, Mr. Laurier will be the second French-Canadian chosen as premier since the confederation of the provinces. The result of the election has been to create considerable talk in the United States regarding possible closer commercial relations between this country and Canada. Just how much of this talk will prove to be justified remains to be seen.

There has been some complaint, it appears, from Spanish sources of the fact that Consul-General Lee has discussed the condition of affairs in Cuba, and the actions of the Spanish forces and commanders, with a marked absence of reserve, in a letter to a relative residing in Washington. The discussion in the letter takes the shape, in some portions, of pretty vigorous criticism. There was some talk of a probable development in the policy of the goverment in relation to the Cuban question, but so far no change has taken place in the situation. In Spain the Senate has been debating the question of relations with the United States, and in the course of the debate a motion was made for the abrogation of the protocol of 1877, but this motion was defeated by a two-thirds majority.

A little flurry was occasioned this week by the news of the arrest of the crown surveyor of British Guiana by the Venezuelan authorities. The surveyor, it appears, was working, with a force of about one hundred laborers and engineers, well within the Schomburgk line, opening up a road from the Barima to the Cuyuni river. When notified by the commander of a force of Venezuelan troops to stop work, he did so, under protest, and communicated with Sir Augustus Hemming, the new governor of British Guiana. The governor notified the surveyor to offer no resistance to the Venezuelan authorities, and he apparently did so, but was arrested on the receipt of additional instructions from Caracas. There was some talk of complications resulting from this action of the Venezuelan authorities. Information was received yesterday, however, to the effect that the President of the Venezuelan republic had directed the release of the surveyor.

THE BATTLE OF THE STANDARDS.

Notwithstanding repeated declarations that the tariff and not the question of a sound currency is the supreme issue before the American people to-day, those who are perhaps closest to the commercial and industrial situation, not only in its domestic but in its international bearings, are aware that the overruling issue is the question of the monetary standard. Much has been written and printed concerning the financial plank in the Republican platform adopted at St. Louis. The first impression produced by its publication was favorable. Yet, even this apparently unqualified declaration in favor of gold contains loopholes.

The financial plank of the Republican platform contains no declaration against the free coinage of silver dollars under such an act as that which has recently been repealed. In other words, while it declares for gold and against free silver coinage at the ratio of sixteen to one, as an affirmation, it makes no assertion looking to the prohibition of the continued, limited or other coinage of fifty-cent silver dollars. The plank, while conspicuous for what it does say as to the affirmations therein contained, is quite as conspicuous for what it does not specifically object to. In addition to omitting a declaration against the further coinage of dollars which are not dollars, it avoids reference to the cancellation of legal tenders when redeemed. With these loopholes for the entertainment or satisfaction of those who favor bimetallism or free silver at the rate of sixteen to one, this "sound-money" plank may be found satisfactory to them as half a loaf.

Much stress has been laid on the position of the sound-money Democrats of the east and elsewhere, and the influence their opinions and efforts may have in the work in behalf of sound money. Yet, in the letter sent to the press on June 21 by Mr. William C. Whitney, while we find that gentleman's opinions favoring a gold standard, he seems to have surrendered a large portion of the strength of his position without a conflict. It is to be regretted that this estimable leader has conceded not only the desirability but the probability of a bimetallic currency, not only in the United States, but among the more civilized countries of Europe, and in the near future. In doing this he has thrown more fuel into the fire of the free silverites than water to put out.

It is a platitude to repeat that politics is generally a game of compromise, and it may be that the discrepancies in the Republican financial plank and the sop thrown to the silverites by Mr. Whitney are offered as compromises to those who favor free silver coinage at the ratio of sixteen to one, in the hope of gaining something for the gold standard, even though the outcome makes the maintenance of that standard doubtful. This may be good politics. Whether it will appeal to the best informed, not to say the expert business or financial sentiment of the country, remains to be seen.

The time should be past when it is necessary to point out to the intelligent business man that two monetary standards are as impracticable as two yard measures of different lengths. The question of an international system of bimetallism by agreement has no more basis of practicability today than it had twenty-five years ago, and the mere fact that there are a few public men in England and in Germany who cling to the idea that the reverse is true is not sufficient to warrant the statement by any political party, or by any party leader, that we may have bimetallism in the near future if we will only wait; but in the meantime let us have the gold standard, because we cannot maintain bimetallism unassisted.

There is a surprising dearth of specific allegation in the manifesto of the bolters from the Republican National Convention at St. Louis.

The declaration is made, however, that the only remedy is to stop falling prices; that prices will never cease falling under the single gold standard; that the restoration of bimetallism will double the basis of our money system, and in time double the stock of primary money of the world, which it is declared will stop falling prices and steadily elevate them until they regain their normal relation to the debts and credits of the country.

As an argument in favor of the free coinage of silver at the ratio of sixteen to one, this may be as good as any other, but it appears to leave much to be desired. As pointed out by Mr. Whitney, among thousands of others who have discussed the subject, the maintenance of a double standard is not a question of desire but ability. The decline in the commercial value of silver was based on its production and consumption, as much as late declines in prices of wheat and hogs. The so-called appreciation in the value of gold is only made possible as a conception by the reversal of the point of view. The commercial value of silver has greatly and actually declined throughout the markets of the world. It is, therefore, easy, of course, for the casual thinker to declare, if he chooses, that the value of gold has appreciated, particularly if he regards the value of silver of late years as practically stationary. Applying the laws of production and consumption in late years to both gold and silver, the reason for the depreciation of silver is apparent. The claim which has been made so often that the decline of prices of staple commodities is due to the decline in the price of silver is on a par with the argument that every man who carries a hickory stick must have the rheumatism, because nearly every man known to have rheumatism has carried a hickory stick. The proposition to coin silver at the ratio of sixteen to one is a proposition to buy fifty-odd cents' worth of silver and stamp it as worth one dollar, at which price it would be receivable in the markets of the country. Its winning character is most likely to be appreciated when the student realizes that international exchanges have to be paid in gold. The proposition in its largest sense is that the United States will receive fifty-odd cents' worth of silver in any amount and coin it into dollars. If such a plan were advanced with reference to any other article of merchandise, it would be perhaps easier to appreciate the stupendous nature of the disaster which sooner or later would follow. The plan is that the United States offer to take the entire silver surplus of the countries of the world at its commercial value and maintain it on a parity with gold, or at a valuation nearly twice as great.

It is barely possible that the extreme to which the idea of home market and protection has been carried in some minds has given the impression that the United States or any other country is sufficient unto itself in all material matters. In order to test this it is only necessary to imagine for a moment the consequence of putting into operation the free silver idea in a single state. How long would it be before that commonwealth would find itself in straits? Could the business world of even the great state of New York proceed without danger if it had a financial system of its own which other states had a right to reject?

The danger of the present menace lies largely in the honesty and sincerity of the belief in free silver coinage at the ratio of sixteen to one by so many people, particularly west and south, with whom fallacious arguments and allegations concerning a theory have run away. Is it too much to suggest that one takes his watch to the watchmaker to be repaired instead of the blacksmith, and that he goes to a physician for a prescription for a complicated disorder instead of to a veterinary surgeon? Are the silver leaders financial watchmakers and physicians? It may be that the silverites in national conventions and in Congress are the real experts in matters of international finance; that they are those who, from experience and familiarity with the history of international finance, are most competent to decide upon the great financial question now before the American people, but that is not the belief generally entertained in the financial world.

Whether they are or not, it remains true that, because of the evolution of money, gold is the single financial standard among the most enlightened nations. If the people of the United States require an education through bitter experience in order to find this out, and insist upon having one, it remains, of course, for them to decide.

ANTHRACITE PRICES ADVANCE.

Further preparations have been made this week by the coal mining and transportation companies for the first of what it is anticipated in trade circles will be a series of advances in the price of anthracite. As was pointed out in these columns recently, the new order of things in the anthracite business has been, from the company's point of view, decidedly successful. Under the agreement of the presidents the output has been restricted as it never was before, and the accumulated surplus of mined coal left over from the coal war of 1895 has been so reduced that it no longer occasions either anxiety to the trade or concessions in prices for the sake of moving it. The May output of the combined companies was 3,125,000 long tons, as against 3,013,000 tons in April, and although the production in May was smaller than that of the same month last year by 1,204,000 tons, it was some 1,300,000 tons larger than in May, 1894. The results of the month (and it is to be presumed that those of June have been similar in their character) have certainly encouraged the mine owners and transporting railroads to institute the advance announced this week. It would appear that the actual output largely exceeded previous estimates as to what the market would absorb, and that several of the companies were forced to fall back upon their accumulated stocks of stored coal in order to fill the orders of which they were in receipt.

The advance now determined upon is 25c. per ton in the circular figures, to take effect at once. All old contracts at lower prices are to be abrogated on the 31st of the current month. The new circular is to be strictly adhered to, and the general feeling in the trade is that there will be little or no variation from the quoted figures. The difference in the prevalent conditions which this marks may be appreciated from the fact that a year ago, and, in fact, throughout 1895, contracts were freely made at concessions of anywhere from 25c. to $1.50 per ton. The old circular price for grate size anthracite at tidewater is $4 per ton. The present advance makes it 25c. higher, with corresponding changes in other sizes. Moreover, the advance will apply at all points, including at western cities, where the price had recently been advanced 25c. This indicates that the combination has obtained a firm grasp on the market, and considers itself strong and in sufficiently advantageous position to dictate prices—something that has not been true of the anthracite trade for a number of years past. It may also be noted that the independent producers, who on so many occasions have been the source of disturbance in the business, are in this case in harmony with the railroads and large producing interests affiliated with or controlled by the railroads.

It does not seem, however, that the marking up of the price is to be accompanied by any decided augmentation of the aggregate production. The anthracite companies, in short, appear to have learned their lesson as to the effects of competing for tonnage without reference to the price at which the coal mined and carried could be sold. The idea that the market would take 3,500,000, or even 4,000,000, tons during the approaching month has, to all appearances, been modified. The contraction in general business seems to affect the movement of coal as well as that of other commodities, and the impression is that, adhering to the conservative policy which has been pursued since the new agreement went into force, no effort will be allowed to force more on the market than it is fully prepared to absorb; or, in other words, the May and June outputs will not be exceeded to any extent. Altogether, the anthracite trade, not long since one of the most demoralized and disturbed branches of industry, has, by a firm policy and a wise regulation of output to requirements, been brought within a few months to a healthier condition than it had experienced in a number of years.

FOREIGN TRADE AND THE TREASURY.

To the Editor of BRADSTREET'S:

SIR.—In reviewing the course of the national finances for the last eleven months it must be borne in mind that the elements of risk and uncertainty more than balanced the stable and measurable factors. A year ago it seemed justifiable to count upon two influences of improvement as almost certain. The first of these influences was a gradual increase in the importations of dutiable merchandise, the natural movement of which had been greatly disturbed for two years by the uncertainties inseparable from a general revision of the tariff. For nearly two years imports paying duties had been reduced to the lowest mark, indicating a hand-to-mouth business in those commodities. It was only reasonable to expect a reaction. The second influence to be expected was prompt and efficient action by Congress towards removing the great cause of financial unrest and Treasury crises.

It requires only a superficial investigation to perceive how disappointing in results these expectations proved. To find a situation approaching it we must go back to the long years of depression which followed the crisis of 1873. Six years of

falling imports reduced the revenue from customs to as low a point as was touched in 1894—a year which must always stand out in our commercial history as remarkable in its trade features. But 1878 marked the turning point in the depression, and in four years the customs revenue was greater than it had been when the law of 1873 was passed to reduce customs revenue. The recovery after the law of 1883 was also accomplished in four years. At the end of June nearly two years will have passed since the law of 1894 went into operation. As a measure of the recovery the customs receipts under that law are suggestive. In 1894 the receipts were $128,881,868; in 1895 they were $147,901,218, and to the 23d of June, 1896, they were $157,366,258, with every prospect of between two and three millions being added before the end of the month. This marks a very fair rate of increase, and is by no means discouraging.

It deserves a little more study in detail. To the end of May, 1895, the imports of dutiable merchandise were $337,816,694, and to the end of May, 1896, $378,917,255, an increase of $41,100,561. The amount of customs paid upon the imports of 1896 was $149,731,828, and upon those of 1895 $140,462,607, an increase of $9,269,221. The details of the three weeks of June, 1896, are not yet available, but they would not materially alter the results. To this increase in imports two commodities have contributed, and they are the very commodities over which was fought the greatest contest in the tariff legislation of 1894. Unless a duty had been imposed upon sugar there would have been a heavy deficit, and the revenue from manufactures of wool has, as yet, made good only one-half of the loss of revenue incident to the removal of the duties from raw wools. These two items direct attention to the general scheme or classification of dutiable imports. I give the imports for the ten months:

Group.	1895.	1896.
Food and animals	$60,511,387	$86,292,868
Crude materials	25,119,334	19,936,375
Manufactures, for mechanic arts	41,047,630	56,480,425
Consumption	93,300,978	111,784,848
Luxuries, etc	82,586,474	71,563,130
Totals	$302,565,803	$346,457,646

Sugar accounts for the increase in the first group; the depression of industry explains the decrease in the imports of raw material, and manufactures of wool have given the largest part of the increase of the manufactures for consumption. From such a comparison the wisdom of imposing a duty upon sugar can hardly be questioned, and the duty on wool is to be judged by considerations other than the revenue lost by the government.

It was in customs revenue that the greatest element of uncertainty was to be found. The receipts from internal revenue to June 23 were $142,575,776, and in the corresponding period of 1895 $140,050,981. The increase was two and a half millions, to which should be added an increase of $1,120,000 in the receipts from miscellaneous sources. The total revenue for 1896 was $318,899,857, and in 1895 $306,902,527. In a year of depression, uncertainty in financial and commercial circles, and of utter hopelessness in the expectation of currency reform at the hands of Congress, an increase of nearly $12,000,000 should be a source of some gratification. The expenditures were also decreased by seven million dollars. On the mere showing of receipts and expenditures the government was nineteen millions better off at the end of 1896 than it was at the end of 1895, and this nineteen millions is almost the exact difference between the deficit of 1895 and the deficit of 1896.

This tells only one-half the story. In reality, the Treasury is in a far stronger position than it was a year ago. Then its gold reserve was less than $100,000,000, and there prevailed the dread of the possibility of a failure in the efforts of the gold syndicate to perform its engagements, so far as finally to protect the Treasury against heavy withdrawals of gold for export. It was regarded as a financial experiment of a new kind, and as such open to doubt in its ultimate results. Now, the Treasury holds more than one hundred millions in gold, and there is little prospect of any immediate call for the metal in large amounts for export. A year ago the Treasury's cash balance, outside of gold, was $83,663,000. It is now nearly double, or $161,730,671. To count a deficit of $29,000,000 or $30,000,000 as of moment in the face of such a holding is absurd, for there is enough to meet four years of like deficit without bringing the Treasury into apprehension. More than $156,000,000 in gold has been paid out in the last twelve months, and yet the Treasury holds more gold than it did a year ago, and under less fear of withdrawal. Circumstances pointing to stability of conditions in government finances would have multiplied in the last year had it not been for the neglect of Congress and the pendency of a presidential election.

As to the future, it is difficult to reduce to statistics the possibilities of twelve months, complicated as they are by political considerations. These general considerations may be entertained: The revenues from sugar will increase, for the imports of 1896 have not attained what are sufficient to supply the country at its normal rate of consumption; the importations of manufactured products will be increased if it becomes certain that a higher tariff is the chief remedy proposed for establishing beyond question the position of the Treasury. These importations will be in anticipation of higher duties, and therefore temporary, and in the end an expression of distrust. Unless duties can be so modified as not to result in spasmodic movements of imports (and no tariff revision has been free from this result) it would seem the part of wisdom to allow the present scheme of duties to remain as it is. It has shown a greater capacity for revenue development than was anticipated, and stability is the one element required to its further development in that direction. It imposes an average rate of duty of about 42 per cent. on dutiable imports, and under the same average rate the law of 1873 produced more than two hundred and ten millions of revenue on imports of dutiable merchandise, valued at $495,000,000. The dutiable imports of 1896 will exceed four hundreds of millions in value, and should be larger in 1897. Any recovery in industry results in an increased importation of raw materials, while any betterment in the general condition is reflected in the importations of articles of voluntary use or luxury. It does not seem possible that the country could touch a lower depth of importation than was reached in 1894. Of the leading imports of manufactures only those of cotton showed a decrease in 1896; everything else tended upward. Further, the trade returns of the leading European countries point to enlarged commerce, and it is from Europe that the greater part of the articles paying duties is derived. If customs yielded in 1896 $12,000,000 more than in 1895, it is reasonable to suppose a like increase in 1897, even if the prevailing depression continues. For the movement of increase is affecting revenue-producing articles of import, such as are not likely to be affected by distrust and embarrassed commerce. With no disturbance of the tariff we may expect $172,000,000 from customs, $145,000,000 from internal revenue, and from miscellaneous receipts $18,000,000. This gives a total of $335,000,000 of ordinary receipts. On the lowest estimate of revenue there will remain a small deficit, and this deficit will be wiped out by a very slight improvement of trade conditions. Confidence and stability are the two factors yet to be obtained.

WORTHINGTON C. FORD.

Washington, June 24.

FURTHER ACTIVITY IN SILVER.

In its present nervous condition, Wall street may be pardoned for taking distorted views of the various incidents that arise in the markets. It is, therefore, not necessary to attach much importance to the idea that the renewed activity in and large buying of silver bullion deposit certificates was merely part of a bear campaign against the railroad and industrial share list. The movement in itself was, however, sufficiently marked to attract attention, the transactions in the silver certificates during the week having amounted in all to no less than 1,054,000 ounces, while the quotation therefor was carried up from 69¼c. per ounce to 70c. There is no doubt that the buying in this case was of a speculative character. The heaviest purchases were made through channels which indicate that such was their origin. The same brokers were also heavy sellers of Sugar and other stocks that were prominent in the decline of the stock market during the early portion of the week. A theory was formed that they may have some relation to the belief that the Chicago convention will declare for free silver coinage, and its consequent effect on stock market values, not only as regards the lowering of quotations for railroad and other corporation shares, but in furnishing a basis for an advance in silver and the creation of more general speculative interest in it.

How far the impression that political developments will influence the position of silver in the market has been really responsible for the movement just noted is an open question. There are, however, some developments in connection with the commercial market for silver at the moment that are worthy of attention in themselves, and which would be calculated, even in the absence of other factors, to draw speculative attention to silver. It is understood that the Japanese government is still pursuing a policy of purchasing considerable amounts, but at the same time carefully regulating its operations so that there will be no decided advance. Its operations were felt in London during the bull movement in silver that occurred over a fortnight ago. According to current reports, which seem to have a good foundation, its operations have now been transferred to San Francisco, and a demand for silver which has appeared there is attributed to the representatives of the Japanese treasury. This has had an effect on the amount of bullion coming from the west to New York for shipment to Europe, and the result of the speculative purchases here during the week is that the available supply is practically absorbed. Indeed, the producers and their recognized representatives were the principal sellers on the rise, largely on the basis of ten days' time for delivery. Some of the rumors in circulation are to the effect that the amounts in question had already been sold to London, but that they expect to buy back the silver in that market and thus meet their engagements for delivery abroad. In fact, in some cases they are understood to have actually pursued that course.

The London silver market has, indeed, been somewhat passive. This does not disagree with the belief that Japan's buying orders have been withdrawn from it. Nevertheless, though somewhat tardily, the London commercial quotation for bars has moved up a little in sympathy with our figures. The prices quoted by local bullion dealers here have been firm and advancing at 68¾@70c., while London showed only a small rise, from 31 7/16d. to 31⅝d. per ounce. A circumstance, however, which affects it is the announcement, after some delay, of the expected issue on the part of the British-Indian government of a large rupee loan in India. This has greatly strengthened India exchanges, creating a considerable demand for Council drafts on Calcutta and Bombay, and has given a bullish tone to all silver securities, while India has also come into the silver market as a buyer to a limited extent. Taken altogether, the silver market is in a much more interesting condition than for a long time past, though the outcome of any movement like that which our own market has just developed is involved in a great deal of doubt.

THE NEW ENGLAND COTTON GOODS INDUSTRY.

In cotton goods the past year has been far from profitable to manufacturers, although twelve months ago the situation appeared hopeful and every prospect pointed to an excellent trade. The large crop of cotton in 1894 forced down the price of the raw material as well as the manufactured fabric, and in order to find a market manufacturers were obliged to stop much machinery and wait for demand to spring up. This state of affairs ruled when the prospect of a short cotton crop in 1895 began to give the market tone. Manufacturers were well stocked with low-cost cotton from the 1894 crop, and willing to sell goods at figures that the then advancing price of raw material made appear cheap. Large orders were booked, machinery was put in full operation, and business prospects seemed excellent. The price of raw cotton continued to advance as reports as to the crop showed that the shortage was not exaggerated, and that the American outturn would be nearly 3,000,000 bales below that of the previous year. This gave tone to the market for manufactured goods, and prices advanced all along the line. The year of 1895 went out with business conditions apparently in excellent shape.

When the mills that sold ahead caught up with their orders it was not thought necessary to wait for new orders, machinery at work on all kinds of cottons being kept fully employed. The year 1896 opened dull as far as consumptive demand was concerned, but the statistical position of raw cotton had not weakened, and a favorable situation was easy to figure out on paper. As the spring advanced it was seen that, while an enormous amount of goods were being turned out by machinery fully employed, there was no corresponding consumptive demand, and goods continued to

pile up instead of finding their way into consumers' hands. With the statistical position of cotton favorable, manufacturers were encouraged to continue production, although it was predicted that a collapse must come if demand did not improve. With the enormous amount of goods on hand, buyers had lost interest in the statistical position of raw cotton, and, with consumption small, were content to wait for the break they saw was bound to come.

By this time manufacturers were also aware of the load they had placed on their own shoulders and made preparations to relieve the market. Ordinary trade cuts in prices were of no interest to buyers, and it was seen that to get goods out of the way they would have to be put up at a price to attract consumers as well as the dealers.

Ginghams had been one of the poorest sellers, and several mills emptied their surplus on the market through leading jobbing houses and at auction at prices that caused them to be carried off quickly. Prices were made so low, whether through the auction houses or direct to the jobber, that they were bound to sell—in some instances at nearly 50 per cent. below their nominal value. Many thousand cases were sold in this way, and other operators who did not so dispose of their goods were forced to about the same basis in order to move their goods.

During the past few months this method of doing business has ruled, white and colored goods, as well as print cloths, being forced down to the same low plane, regardless of cost. Much machinery has been stopped, but the market continues depressed, and cuts in prices are being made in different fabrics from time to time, in order to get rid of surplus stocks. Print cloths have felt the depression as well as better classes of goods, and are now quoted as low as was ever known, even when cotton was down to the lowest point, and there is acknowledged to be a stock of over 2,000,000 pieces held by manufacturers. General lines of printed fabrics have not sold to any extent this season, and consequently the demand for cloths by converters has been very much curtailed.

One of the satisfactory features of the market during the past six months has been the steady export business in the coarser class of cotton fabrics. The China, African and South American demand has averaged good, and mills employed on that class of work have had a steady business and profitable prices. Manufacturers do not dare to turn other machinery on to this class of work, however, as they figure that by the time they would be ready to work the call for fine goods should again begin, while there is no sure prospect of the export call continuing its recent activity sufficient to warrant the increased production. The stock of goods on hand is excessive, but there is no doubt much of this surplus and overstock has been due to restricted purchases by the people.

Cotton goods production will be largely curtailed during the next two months in order to relieve the market. It is now stated that the Pacific mills, 180,000 spindles, will shut down for two weeks, beginning July 6. The Fall River people are making efforts to arrange a basis upon which a temporary shutdown may be effected, while meetings of the treasurers of the New England cotton mills are being arranged to consider the matter of running short time during July and August, as suggested by the Fall River manufacturers. Reports from Salem, Mass., say that the Naumkeag Mills No. 3 will close Monday. No. 5 has been closed since June 1, and the remainder of the mills will run four days a week. This will reduce the total production of these mills about one-half.

The statistical position of raw cotton is as strong as ever so far as the 1895 crop is concerned, with the total visible supply of the country reduced to less than 265,000 bales. It will be several months before the new crop will become available, and while the new crop gives every indication of being a large one, any start in the demand for manufactured goods would improve the outlook materially. With the prospect for sound money and restoration of confidence, indications favor a gradual improvement in business. It does not look as though there would be much profit in the business until the presidential contest is settled, and manufacturers will try and keep their organization and be ready to shape their course when the future becomes clearly defined. This depression which has existed has not been so severely felt in all lines of the cotton goods trade, because, notwithstanding the dullness, some manufacturers who have happened to produce specialties for which the demand was active have been able to work through the season and sell goods at a profit. This, however, has been an exception to the rule.

THE LANCASHIRE COTTON INDUSTRY.

Manchester, England, June 17.—The cotton spinning industry of England is showing signs of improvement. At the beginning of the year the margin between the raw material and yarn in American descriptions was very narrow, viz., 2d. for 32's twist, for on January 3 middling American stood at 4⅝d. and 32's twist at 6⅝d. Since that date a large number of spindles have stopped, owing chiefly to financial reasons. In point of fact, the spindleage of Great Britain has declined during the last twelve or fifteen months to the extent of over two millions of spindles. This lessening of the production has at last told upon the position of spinners, for whilst spindles have been stopped, looms have been regaited and got to work. At present most looms are running full time. The result is an improvement, as the output of the spindles is being absorbed by the looms. During the last three or four weeks, during the heavy drop in cotton prices, spinners have been able to retain their prices for the most part, whilst the raw material has declined nearly ½d. per pound. As things now stand, spinners are not doing badly. Mill shares are advancing in value, and the general outlook cannot be called other than encouraging. The margin to-day in 32's twist is 5/16d. to ⅜d. per pound more than at the beginning of the year.

In cloth for export there has all along been a fairly healthy inquiry. The demand from India has been of fair extent. China also has purchased largely. The increase of shipments to Shanghai for the first five months is 52,000,000 yards more than in the same five months of 1895. Turkey, however, has taken considerably less, the Board of Trade figures showing a decrease of 72,000,000 yards in the last five months as compared with the corresponding period of 1895. Altogether, however, cloth is doing well. Shipments to the smaller markets are satisfactory, all the looms are working, and manufacturers, as a rule, are engaged for weeks ahead.

Bolton yarns made from Egyptian cotton continue firm and well engaged. Here, also, the margin has improved. Fine yarns generally seem well engaged. Speaking broadly, the cotton industry of Lancashire is looking healthier than it has for some years. The margin of profit is improving, and some careful observers anticipate that the remainder of the year will prove a satisfactory period for cotton goods and cotton yarn producers. As to the supply of raw materials, Manchester is looking forward to a much larger yield from the United States than last year. It is, of course, too early to estimate the probable crop, but the general feeling here is that the American crop will be 10,000,000 bales.

GREAT BRITAIN'S GROWING FOREIGN TRADE.

In striking contrast with the restriction of American trade, domestic and foreign, is the improvement in the foreign trade of the United Kingdom. British importations for May decreased £1,402,000 as compared with May a year ago, a little more than 4 per cent., but exports of British, including Irish, produce increased last month £468,000, a little more than 2.5 per cent. This gain does not appear large, and it is only when grand totals of exports are considered that the significance of the movement of British foreign trade is perceived. Contrasting British exports for May this year and the like month two years ago, the increase is found to be £1,300,000, or, with the necessary allowance for one less business day this year than in 1894, foreign shipments from the United Kingdom in May this year are shown to be expanded about £2,000,000 as compared with the like month two years ago.

The gradually decreasing gains in values of exports by months this year is in part explained in that the United States have purchased considerably less from the United Kingdom than in the like portion of 1895. British exports to the United States in May this year are only £1,000,000, as compared with £1,567,000 in May, 1895. Allowing for the difference in the number of business days, as the *Statist* puts it, it would appear that the United States have reduced British purchases by about £500,000, or, approximately, 32 per cent. The chief falling off in English shipments to the United States is of Bradford goods, of which we have been taking so many for nearly two years past. The total value of this variety of exports here is given at only £125,000, as against £346,000 in May last year, and only £71,000 worth of woolen tissues against £95,000 worth. Purchases of tinplates by the United States continue small, only £103,000 worth, as against British tinplates valued at £209,000 last year. The meaning of the falling off demand from the United States for British woolens and tinplates is that since the beginning of the year the United States purchases of British worsted tissues have been worth £1,379,000, against £2,008,000 in 1895, and only £406,000 in the corresponding period of 1894, when, of course, English exports to this country were extremely small. Our purchases of British tinplates for five months of the current calendar year are declared to have amounted to only £542,000, as compared with £1,104,000 in the corresponding portion of last year, a falling off of more than 50 per cent.

Notwithstanding the dimunition in foreign trade indicated in the foregoing, the increase in demand in British markets from Eastern and Oriental countries, particularly from India, more than counterbalanced British shipments westward. The value of exports to India in May amounted to £2,366,000, against £1,870,000 in May last year, a gain of nearly £500,000, which, with an allowance for difference in the number of business days in May this year and a year ago, points to an improvement of about 35 per cent. Shipments of cotton goods to India from the United Kingdom have expanded greatly, the increase in May this year over last in total values being about one-third. Railway construction in India has caused an expansion of about 150 per cent. in total value of steel and railroad iron sent from the mother country to India last month compared with the like month a year ago.

As regards British importations, increased values are noted with reference to animals for food, tobacco, metals and miscellaneous raw materials. All others show decreases. The United States continues to send larger numbers of oxen and bulls to the United Kingdom, and last month more sheep came from the same quarter. More fresh beef and mutton was also imported and at lower prices. These large imports of beef and mutton had some effect on bacon, as at present low prices they enter keenly into competition with the latter, with the result of depressing it also. With the exception of Indian corn all cereals are much below last year, especially wheat and barley, but prices are a little higher. Russian, American, Argentine, British East Indian and Australasian wheats are those in which the decreases are most marked. Sugar was also in smaller supply, and in this case the price has risen in consequence. Cocoa and tea are less, but coffee, brandy and wine show increases. Of the latter French wines are most in demand. Of the metals, copper, iron and quicksilver are each much in excess of last year; but tin in blocks is less, and also silver ore. The British imports of cocoanut oil and petroleum are considerably less than in May, 1895. Among raw materials for textile manufacture jute and sheep's wool are higher in both quantity and value, but cotton, flax, hemp and goats' wool are less. Of other raw materials, wood, India rubber, gums, tallow and pulp of wood were each landed in greater quantities, but hides, manures and rosin are less. In the manufactured articles iron shows the greatest increase, but the decreases of the receipts of leather, silks, paper and woolens more than balance the increases of other articles of this class.

As regards the exports of British and Irish produce, the classes of articles which show decreases are living animals, raw materials, yarns and textile fabrics, chemicals and miscellaneous articles; the others, especially metals and machinery, are higher in value. More of beer, spirits and fish was shipped. The increase in the quantity of spirits is due to larger exports to Australasia. Coal is less in quantity by 4,310 tons, and in value by £76,014. Sheep's wool is also less in both quantity and value, but cotton yarn and piece goods, although lower in quantity, are higher in value. Of yarn Europe took less, but the British East Indies more. This holds good also as regards the cotton piece goods, but Japan, Brazil and the Argentine Republic each took more. Of metals iron is more by 38,355 tons in quantity and £357,895 in value. Hardware, implements, lead, tin and brass are each more. Articles of apparel and personal use both show increases, and the in-

creased shipments thereof have gone chiefly to South Africa and Australasia. Chemicals are less in quantity and value, the shipments to the United States having fallen off very considerably. As regards the miscellaneous articles, it is apparent from the increase in values that, as in previous months, the smaller industries are well occupied.

CANADA IN 1895.

The Statistical Yearbook of Canada for 1895, in view of the attention attracted by the results of the Dominion elections on the 23d instant, is more than usually interesting. It is filled with information, historical and otherwise, regarding the progress of the Dominion, not only for that particular year, but, in fact, since its discovery four hundred years ago. Following a custom begun in 1893, the Yearbook is divided into two parts, the Record and the Abstract, the first dealing with what might be called the historical and descriptive and the second with the statistical features. In addition to the usual historical points, descriptions of the constitution and government, the forest wealth, and a summary of the events of the year, the Record contains the first of a series of biographical notes by advocates of the principle of confederation, the third of a series on countries with which Canada deals, and an extended analysis of the industrial, mechanical and manufacturing returns of the last census. A digest of Canada's Indian treaties is appended to the synopsis of treaties made by the mother country in which Canada is interested.

The Abstract contains the substance of the reports and returns made to the government through its several departments, so arranged as to give some idea of the wealth derived from agriculture, fisheries and the mines, the trade and commerce created by the distribution of these products, the means by which these products are transferred from producer to the consumer, the modes of transportation, and the facilities provided for communication. The result of this compilation has been the creation of a volume of more than one thousand pages, from which it is safe to say almost any needed information regarding the past and present of Canada may be obtained. It is, of course, impossible, even if necessary, to go deeply into the statistical features. It is worth while, however, noting among the physical characteristics that that country is the largest of all the British possessions, amounting to more than 30 per cent. of the total area of the British empire. Canada and Australia combined comprise 70 per cent. of the area of the British empire. Forty countries the size of England, Scotland and Wales combined could be made out of Canada, three countries the size of British India, and fifteen the size of the German empire.

The popular impression that Canada is a cold region receives attention. To quote: "The Dominion is so vast that one part may be charged with perpetual snow, while the other is bathed in almost perennial heat and sunshine. One part receives the cold atmosphere of the frozen sea, * * * another has the surface of its soil baked by the heat of tropical waters. In the extreme north vegetation is so stunted that the highest tree is not as tall as a two-year-old child; in the southern parts fruits and flowers grow with as much vigor as in Italy or the south of France."

The population on the 4th of April, 1891, was 4,833,239, of which 2,460,000 were males and 2,372,000 females. Forty-five per cent. of this population found its subsistence in agriculture, which is, therefore, of paramount importance. The area of improved land in Canada in 1891 was 28,537,000 acres, of which 19,904,000 acres were under crop, and a little more than 15,000,000 acres in pasture. The increase in lands under crop in 1891 compared with 1881 was nearly 5,000,000 acres, or over 30 per cent. Compared to the whole area of Canada, however, the area under crop and in pasture was only about 10 per cent. The leading agricultural products of Canada are oats, potatoes, wheat, turnips, barley and peas and beans, in the order named. The production of oats was 82,000,000 bushels in 1891, that of potatoes 52,000,000, wheat 42,000,000 bushels, and turnips and other root products 49,000,000 bushels. The production of fruits, grapes, etc., was 68,000,000 pounds. Tobacco, though not generally associated in the popular mind with Canada, was produced to the extent of over 4,000,000 pounds. Since 1891, of course, there has been a great expansion in agricultural lines. An example of this is to be found in the production of wheat, which in Manitoba and Ontario alone, in 1895, amounted to 49,000,000 bushels, and a similar expansion is noted in other classes of farm products.

In common with nearly all other countries, Canada has suffered from trade depression. The total imports of Canada in 1895 aggregated $110,781,000 in value, $13,000,000 less than in 1894, and, in fact, smaller than in any preceding year since 1887. Exports in the same year aggregated $113,638,000, smaller by about $4,000,000 than in 1894, and smaller, also, than in either 1892 or 1893, but considerably larger than in any year previous to 1892. For the first time since 1881, also, exports exceeded imports. In only three preceding years, 1892, 1893 and 1894, was the total volume of trade larger than it was in the year just closed. Naturally enough, the territory contiguous to Canada has shared largely in the Dominion's business. The total imports from the United States in the year 1895 aggregated $59,337,000, 53 per cent. of the whole, Great Britain coming next with a total of $31,138,000, or 28 per cent. of the entire imports. From this it will be seen that the United States and Great Britain combined furnished nearly 82 per cent. of all Canadian imports. As regards the export trade of Canada, Great Britain holds first rank with a total of $61,856,000, or 54 per cent., while the United States took $41,297,000, or 36 per cent. of the whole. As regards the aggregate foreign trade, the United States stands first with a total of $95,932,000, against $92,988,000 for Great Britain. The total value of imports per head of population in Canada in 1895 was the smallest since 1881, $21.79 per capita, while the value of exports was $22.35. The amount of duties collected per head of population in 1895 was $3.52, the smallest, also, since 1881. It is interesting in this connection to note that while the imports from the United States into Canada exceeded the value of British goods imported by $28,000,000, the goods imported from the United States only paid $6,897,000 in duties, whereas goods imported from Great Britain paid $7,006,000 duties. The heaviest decrease in imports in 1895 from 1894 was in manufactured goods ready for consumption. Articles of food and drink, chemicals, oils, raw materials and live animals all showed heavier imports in 1895 than in 1894 as regards quantities imported, but the lessened prices for these imports resulted in a net decrease in values. As regards exports, first place appears to be taken by the shipments of live animals, with their products, with a total in 1895 of $34,387,000. Manufactured goods come next with a total of $26,144,000, agricultural products third with a total of $15,719,000, products of the fisheries fourth with a total of $10,692,000, while products of the mines and of the forest follow in the order named with totals respectively of $6,981,000 and $5,517,000. Of the exports of live animals and their products in 1895 Great Britain took 87 per cent. and the United States nearly 11 per cent. Of agricultural products Great Britain took 66 per cent. and the United States 23 per cent., and of the fisheries Great Britain took 39 per cent. and the United States 28 per cent. On the other hand, of mineral products exported from Canada the United States took nearly 90 per cent. and Great Britain only 5.5 per cent., while of the products of the forest the United States took 66 per cent. and Great Britain 33 per cent. Of manufactured goods the United States took 45.5 per cent. and Great Britain about 42 per cent.

Turning to other statistics of Canada, we find that there were in operation on June 30, 1895, in Canada, 15,977 miles of railway, earning $46,785,000, a slight gain as regards mileage (350 miles), but a decrease of nearly $3,000,000 in earnings. The total number of vessels entered at Canadian ports in 1895 was 14,158, with a total of 5,575,000 tons, while the vessels cleared numbered 13,718, with a total of 5,401,000 tons, in each case showing a slight decrease from the preceding year. The total gross public debt on June 30, 1895, was $318,048,755, an increase of $10,000,000 over the preceding year. The net debt was $253,074,927, about $7,000,000 larger than in the preceding year. The total revenue during 1895 was $33,978,129, against $36,374,000 in the preceding year. Expenditures in 1895 exceeded revenue by about $4,200,000, aggregating as they did $38,132,000, against $37,585,000 in 1894. The total capital of the chartered banks of Canada in 1895 was $61,701,000; their assets amounted to $312,986,000, against liabilities of $226,943,000. There were 731 post office savings banks in Canada in 1895, with 120,628 depositors and balances on June 30 of $26,805,000.

ENGLISH BANKERS CONSOLIDATING.

Great Britain's system of banks was largely an outgrowth of private enterprises, and though the multiplication of joint-stock banks has reduced the relative importance of the private bankers of England, they have, particularly in the country districts, held their ground, and, down to the present day, constituted an important feature in the internal economy of the country. Owing largely to the system of branch banking which prevails there, the private banks were particularly strong in the country districts, and do considerable good in supplying facilities to small places, which, under our system, could not support a national or state bank even of the most limited kind.

The acts of Parliament fixing the status of the Bank of England, while giving it the sole right to issue notes, expressly exempted the existing private banks, though the process of consolidation and conversion into joint-stock and limited liability concerns, which has been in progress among them during the last ten years, has greatly reduced their numbers and rendered the circulation thus afforded of less practical importance. It may also be mentioned that an unusually large proportion of the private banks of England were founded and remain in the families of members of a small but eminently respectable body, the Friends or Quakers, and that relationship among the partners of the various houses of this class is exceedingly common, so that in fact, if not in name, the establishments thus bound together have for many years formed a combination of capital and experience in banking that has made them a power in the finances of the mother country.

The process of consolidation already referred to is, however, gradually but surely extinguishing these interesting relics of England's banking history. An important instance of this has just occurred. It is a consolidation under the form of a joint-stock bank, and with the title of Barclay & Co., Limited, of some fourteen London and provincial private banks, possessing at present a capital of £3,380,000, and deposits aggregating £24,000,000. The concerns included in this operation comprise no less than 74 partners, and the banks and branches number 182, extending from London through the eastern counties to Yorkshire. Their authorized note issues are £581,000, and the amount of their circulation outstanding is £189,000. This, of course, will now be retired, and the Bank of England will be benefited by its lapsing, though the provision of the law allows it to issue notes to the amount of two-thirds of the authorized circulation of any private banks which surrender the privilege. The new company will have a capital of £3,000,000, and will take the rank among English banks as fifth in point of deposits, while it will stand as third in reference to the number of its branch establishments.

The incident also throws some light upon the stability of banking in England. Among the firms which thus surrender their identity is one Messrs. Goslings & Sharpe, of London, the existence of which dates back to 1650, and which in its inception was a goldsmith's shop. The principal firms included in the transaction are Messrs. Barclay, Bevan & Co. and Gurney, Alexander & Co., which go back to 1720 and 1744 respectively, while five of the other establishments also were founded before the opening of the present century. Commenting on the matter, the London *Financial News* says in a recent issue: "In the numerous fusions which have taken place we see really the prevailing tendency of the age in favor of limited liability. It can be readily understood that a banker, like any other business man, sleeps more easily when he knows exactly the extent of his commitments, and is not liable to lose everything he possesses, including the savings of a lifetime, by some unforeseen disaster. While the public have, doubtless, profited by the limited liability laws, and while these have also proved an incentive to business—though not always to sound business—it is the capitalist class which has derived the most benefit from them. As regards banking amalgamation, there is no doubt that partners in small banks have been glad to avail themselves of the opportunity of reducing their liability, and at the same time of improving their position; for fusion not only strengthens each of the concerns involved, but it ought also to cause a reduction in expenses. In Scotland the principle has

been much more widely adopted than in England, and with excellent results. Probably it will not be many years before provincial private banks in this country become altogether a thing of the past. To many old-fashioned Londoners it will be a matter of regret that Goslings and Sharpe are about to follow Scotts, Herries-Farquhar, Twining, and Praed's, and to lose their identity in a great joint-stock concern; but it is merely in accordance with the times, and unless public opinion changes we shall apparently have scarcely one of the celebrated private banks left a few years hence."

MEXICAN NATIONAL CREDIT.

President Porfirio Diaz, of the Mexican republic, has decided the question of the presidency by standing for another term in that office. There is no question of its ratification by the formality of a popular vote, and, in fact, no opposition ventures to make itself felt. However contrary this situation of power for five terms by the executive may be to our ideas of a republican form of government, there is no room to doubt that it has been a good thing for Mexico, and that the business interests of the country, both foreign and domestic, are a unit in supporting Diaz, whose long, practical dictatorship has been a period of continued progress for Mexico, and has been marked by a steady development of the country's enormous but latent resources. In fact, under the Diaz régime, Mexico has been gradually taken out of the list of politically unstable Spanish-American countries, and, in freedom from revolutions and internal disorders, has assumed a place in the family of nations analogous to that accorded to Chili among the South American states.

For this result the wise policy which the Diaz administration has followed of extending railroad facilities throughout the republic is largely responsible. Not only do the railroad lines enable the central government to assert its authority and crush out the formerly frequent revolts of local political leaders, but by developing commerce and industry they have aided in creating what Mexico so long lacked, namely, a conservative element and a population imbued with industrial ideas and apprehensive of any disturbance of civil order. It is this element, too, which supports President Diaz, and which, having accustomed itself to rule, is likely to dictate the policy of the country in the future.

Another feature of the rule of Diaz which does not, perhaps, receive the attention from Americans which it deserves is the raising and preservation of the national credit. While there is considerable American capital in Mexico invested in mines, in industrial and commercial undertakings, and, above all, in the railroads of the country, the public securities of Mexico are held abroad, and it is to London and Berlin that Mexico looks in this connection. It is not so many years ago that the external debt of the country was virtually protested and its obligations dishonored. One of the wisest proceedings of its present rulers was to enter into arrangements with a prominent German banking house, by which the debt was refunded and placed upon a safe footing. Since then Mexican 6s, as they are known in London, have had a fair standing, though not selling at par, and it is to be observed that this has been preserved in spite of the depreciation in silver and the damage which the fact implies to the securities of a country whose revenues are upon a silver basis. Of late, indeed, rumors have been heard that a conversion scheme is under consideration. On this subject a London contemporary observes in a recent issue: "The talk of conversion and a new loan has received no shadow of official confirmation from Mexico, and we should fancy it is one of those suggestions which emanate now and again from clever financiers in Europe, who hope, for their own profit, to impress on Mexico the advantages of following their advice. Mexico has shown no disposition so far to listen to the wiles of these financial agents provocateurs, and we hope the republic will stick to its straightforward programme of paying its way and maintaining its credit, without recourse to the attractive method of meeting the service of a new loan by reducing the interest on the older ones. In Señor Limantour's budget statement for 1896–97, submitted in December, the minister remarked: 'The president is resolved not to contract for the present any new engagement in gold, nor to enter into operations which may in any way give uneasiness to the creditors of the nation. It is expedient in every way to wait tranquilly during such time as may be necessary for a consolidation of the prices of our public securities, and the opportunity to bring about such combinations as will permit us to lighten the burden of the service of the public debt and at the same time strengthen the public credit.' As Mexican ministers have usually been quite frank, we may take it that President Diaz will not encourage or assent to any premature conversion of the republic's external debt."

THE "RAND" GOLD INDUSTRY.

Although the Transvaal government has created another troublesome situation for Great Britain by demanding the trial of Mr. Rhodes and those for whom Jameson and his raiders acted merely as instruments, the latest advices indicate that the excitement, so far as it affects the gold-mining industries of the Witwatersrand or the mining stock market in London, is practically over. This was obvious as soon as President Krüger released the smaller Johannesburg conspirators unconditionally, and let the four leaders off on payment of a heavy fine. It should also be noted that the freedom thus obtained by the participants in the revolt of last January is coupled with a promise on their part to refrain in the future from intermeddling in the politics of the country. As the parties under arrest and sentence were the leaders of the mining industry, the step taken by the Boer executive insures that they will in the future give it their undivided attention, and thus tend to restore the activity in the workings of the gold fields that were so seriously interrupted by the events with which the year opened. Jameson's indictment and approaching trial in London would naturally have a tendency to modify the apprehensions of the Dutch burgers, while the needless alarm they manifested at the massing of British forces on their border in connection with the suppression of the Matabele rising seems to have already disappeared. The fact that Krüger has marked out Rhodes for punishment, and the difficulty the British authorities will have in evading his request, even if they so desire, will have little bearing upon the activity at the gold fields, now that harmony, or at least peace, has been restored between the citizens of the South African Republic and the vast number of alien miners who have established themselves in the country.

The outlook is of interest, because from all appearance there is a promise of a renewed increase in the gold production of the "Rand." The progress which had been made in this respect up to last January was as remarkable as anything connected with that truly wonderful district. In the year 1892 the total output, as officially declared, was 1,210,000 ounces of gold. In 1893 it was 1,478,000 ounces, rising to 2,024,000 ounces in 1894, and attaining the volume of 2,277,000 ounces in 1895. It must also be remembered that the political agitation and the scarcity of native labor which preceded the recent outbreak had a serious effect on mining activity at and around Johannesburg during the later months of 1895. The maximum monthly product of the district was in August last, when the total gold output was 203,000 ounces, whereas in December, in the suspense which preceded the actual revolt, the total was only 178,000 ounces, or 4,000 ounces less than in December, 1894. The prevalent troubles have naturally affected the industry in the months that have elapsed since the opening of the year. The whole product of the Rand from January to May, inclusive, is given by the London papers as 850,000 ounces, while in the same five months of 1895 the figures were 912,000 ounces.

The largest falling off was in January, when the reports showed a gold yield of only 148,000 ounces, as compared with 177,000 ounces in the same month of the preceding year. Latterly, indeed, with the calming down of the political excitement and the active steps taken by the government to insure an adequate supply of labor, the returns have increased materially, the production for May being put at 189,000 ounces, against 194,000 ounces in May, 1895. The figures for the same month this year also show an increase of about 18,000 ounces over those of April, so that it can be concluded that the Rand production is once more on the up-grade, while it is permissible to conclude that, having witnessed the effect of the troubles on the principal industry of the country, the Boer government has no desire to do anything that would check its progress. Whether, indeed, the falling off in the record of 1896 thus far will be made up is a question.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

The London *Statist* asks to be allowed to congratulate itself and such of its readers as have followed its advice for some years past upon the correctness of its forecasts in all the leading markets, "but more particularly in the American and South African." When it predicted that South African gold shares would be the next boom, it was "laughed at," but its prediction proved true. And now its prediction that the political difficulties in the Transvaal would be got over, and that there would be another great recovery, "is also coming true." In the same issue it warns English investors to continue to let American properties alone, for reasons which it recites at length. The foregoing reads peculiarly when found side by side with the following paragraph from the New York *Engineering and Mining Journal*: "The English have learned something; instead of buying American mines after they are brought to London with half a dozen commissions quadrupling their price, they are now sending capable American engineers all over this country to buy mines at first hand and at reasonable prices."

CURRENT BUSINESS NEWS.

Industrial.

A special dispatch to the Baltimore *Manufacturers' Record* reports that a 10,000-spindle mill will be built at Gaffney, S. C., to spin fine numbers from 100 to 150, and to be woven into all kinds of fancy cotton goods. This will be the first mill built in the southern states to manufacture such a grade of goods as this, and it is regarded as the beginning of a movement which will result in the south taking a prominent place in the manufacture of the highest grade of cotton goods.

At a meeting of the Fishermen's Union at Astoria, Ore., Saturday, "it was decided by a large majority vote to accept the compromise offer of the cannerymen of 4½ cents per pound for fresh and call the strike off. The state militia were withdrawn to-day."

The contract for making distinctive paper for use in printing internal revenue stamps has been awarded to the New York and Pennsylvania Paper Company, the present contractors. About 800,000 pounds of such paper are required annually.

More steel is said to be used every year in the making of pens than in the manufacture of guns, swords and needles throughout the world. "The typewriter has rather checked the enormous use of steel pens, still they lead."

Textile manufacturers at the south are curtailing production in accordance with an agreement made at the meeting held in Atlanta last month. The Chattanooga *Tradesman* says: "This industry shows little activity except in the matter of mill building and enlargements."

A miners' strike was begun at Leadville, Col., on Saturday, when 750 men refused to go on the midnight shifts. More have since gone out. The contest is over a demand for the recognition of the miners' union, and an advance of wages from $2.50 to $3 a day.

A meeting of the southern textile manufacturers has been called to assemble in Atlanta June 29. The object of the meeting, while not so announced, is stated to be the consideration of steps to curtail production. "Practically all of the mills in the south will be represented."

The street railway boycott in Milwaukee was formally declared off last week by the Amalgamated Association of Street Railway Employees.

The Nail Association, in Chicago, have agreed to allot to the nail machine manufacturers "a certain output by districts, and the restrictions will be compensated for by a cash allowance, equal to the estimated profit which would be made by an unrestricted manufacture."

Commercial.

A San Antonio, Tex., dispatch says that a very large business in the exporting of American hogs to Mexico has been established during the past few months. For several weeks past there have passed through that city from four to six solid train loads of hogs en route to points in Mexico from Kansas City. The ruling prices for hogs are high in Mexico, and the shippers are making a good profit in the business.

Beerbohm's *List*, London, says: "It will be fairly safe to conclude from the present indications that this year's American wheat crop will amount to about 500,000,000 bushels, against a somewhat similar quantity last year. Some estimates, reported to be worked on the bureau's figures, state that same indicate a winter wheat crop of 269,000,000 bushels and a spring wheat crop of 185,000,000 bushels, or a total crop of 454,000,000 bushels. It will have been noticed that the bureau have taken extra precautions this year to obtain a true report as to the condition and acreage of the crop, having caused inquiries to be addressed to 15,000 millers throughout the country. It is possible, therefore, that the bureau figures this year may give a more reliable indication of the actual condition of the crops than has ever been given before."

A San Francisco dispatch says that there is every probability that within the next few months a new steamship line will be in operation between that port and Yokohama.

The managers of the New York Produce Exchange have adopted an amendment to the rules providing that sales of boat loads of corn and rye shall consist of 8,000, and of oats 10,000 bushels. Provision is made for a "call," and speculative purchases and sales shall be in quantities of 5,000 bushels or multiples, with the smallest fraction ⅛c.

Financial.

The United States Treasury has issued a circular to banks repealing the order requiring banks remitting national bank notes to Washington for redemption to prepay the express charges. Hereafter such charges will be paid by the banks of issue, the express charges being assessed against them pro rata at the end of the year.

The following securities were sold at auction this week at New York:

1,101	Shares Kingston & Pembroke Iron Mining Company, $25 each	$125 for lot
100	Shares American Wood Decorating Machine Company, $25 each	$10 for lot
$1,000	City Railway Improvement Company 6 per cent. 20-year gold trust bond, due 1909	$200
370	Shares The North American Telegraph Company, $100 each (incorporated under the laws of the state of Minnesota)	65⅝
$12,000	New Jersey Steamboat Company consolidated mtge 5 per cent. bonds, due 1921, coupons May and November	92
200	Shares Brooklyn Union Gas Co., $100 each	92½
15	Shares Gallatin National Bank, $50 each	300
10	Shares Atlanta & Charleston Air Line Railway Company, $100 each	98
$2,000	Williamsburg Gaslight Company 20-year 6 per cent. mtge bonds, due April, 1900, coupons April and October	106
100	Shares Maryland Coal Co. preferred, $100 each	44
100	Shares St. Louis & Southwestern Railroad Company preferred $100 each	9⅝
$500	Brooklyn City Railroad 1st mtge 5 per cent. bond, due 1941	113
7	Shares American District Telegraph Company, $100 each	25
100	Shares New York & Harlem Railroad Company (ex-dividend) $50 each	295
25	Shares Canda Cattle Car Company	5
70	Shares Maryland Coal Co. preferred, $100 each	45
41	Shares New York National Exchange Bank, $100 each	100
8	Shares Title Guarantee & Trust Company, $100 each	291

A. D. Hepburn, chairman of Group 9 of the State Bankers' Association, has appointed the following committee to represent the group at the annual convention of the association at Niagara Falls on July 17 and 18: J. T. Mills, Jr., R. L. Edwards, W. J. Gilpin, A. Trowbridge and J. W. Harriman.

The argument which was to have taken place on Tuesday at Trenton, in the case of the American Tobacco Company, which is charged with infringing the anti-trust law of New Jersey, has been postponed until July 9.

The Philadelphia and Augusta clearing houses have adopted in substance the regulations promulgated by the New York Clearing House regarding qualified or restricted indorsements on checks, notes, drafts and bills of exchange passing through the clearing house.

The Chicago, Rock Island & Pacific Railroad Company has declared a quarterly dividend of ½ per cent., payable August 1.

The Edison Electric Illuminating Company of New York has declared a quarterly dividend of 1½ per cent., payable August 1.

The Central and South American Telegraph Company of New York has declared a quarterly dividend of 1¾ per cent., payable July 7.

The Mexican Telegraph Company of New York has declared a quarterly dividend of 2½ per cent., payable July 10.

The Washington Trust Company has been appointed by the Supreme Court as a designated depository for moneys paid into the Supreme Court.

Receiver Cowen, of the Baltimore & Ohio Railroad, announces that the company will default on the semi-annual interest of 3 per cent. on the $3,000,000 preferred stock of that corporation, due in July. The trustees of Johns Hopkins University own $1,000,000 of these securities. The holders claim that the interest on the stock is a first lien on the gross receipts of the company, and will ask the courts to compel the receivers to pay it.

Railroads.

The following gross and net railway earnings are reported for May:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Allegheny Valley	$198,717	$216,601	$74,737	$94,227

The all-rail east-bound shipments of dead freight from Chicago last week were 61,002 tons, against 62,202 tons the previous week and 52,402 tons the corresponding week of the previous year.

The St. Louis & San Francisco reorganization committee have selected the following as directors of the St. Louis & San Francisco Railroad Company: J. Kennedy Tod, Isaac N. Seligman, J. A. Blair, Ed. C. Henderson, Horace Porter, Frederick Strauss, of New York; Benjamin P. Cheney, William T. Hart, of Boston; Samuel C. Eastman, of Concord, N. H.; Charles S. Gleed, of Topeka, Kan.; George A. Madill, Richard C. Kerens, and Daniel B. Robinson, St. Louis.

The committee representing the Duluth & Manitoba Railroad Company bondholders has effected a settlement with Messrs. J. P. Morgan & Co., managers of the Northern Pacific Railroad reorganization. Interest due July 1, 1896, at the rate of 5 per cent. per annum, will be paid on the Minnesota division bonds on presentation of the certificates of deposit at the Guaranty Trust Company.

The Southern Pacific Railroad is reported considering the establishment of a large paper plant on its line about opposite Avondale, on the Mississippi river. The plant would be devised to utilize the waste product of sugar manufacture known as bagasse, which is said to be an excellent material for paper manufacture.

Illinois Central is said to have placed orders for 3,000 to 4,000 new cars, mostly freight. This order has been rendered necessary by the recent increase in the company's mileage.

There have been "reports from Chicago that the inability to get the Canadian Pacific Railroad to enter the Joint Traffic Association was causing tension on the part of the Grand Trunk, with which it competed, and the latter might have to retaliate to prevent losing its business."

Dr. William Taussig, formerly president of the Terminal Railroad Association of St. Louis, and who is very familiar with foreign railroad affairs, has prepared a paper on the subject of the rate complications of our railroads and the remedy for them. Dr. Taussig believes that such an organization as the Railway Clearing House in England could be used to great advantage in regulating business here, and the scheme that he outlines would be even more comprehensive than the extension of the Joint Traffic Association agreement to include the western lines. He points out that plans along the same line have been tried in this country, but have failed, because the associations formed have been voluntary and not based upon any legal enactment. Dr. Taussig is in favor of the incorporation of such an institution under a government charter.

The explanation given of the application of the Pennsylvania Railroad for a differential of $2 on passenger rates between New York and Chicago via the Pan Handle route "is that it was made to force the matter of the West Shore's differential to a test. It has long objected to the allowance of a differential to the West Shore, which, it claims, occupies the same relations to the New York Central that the Pan Handle does to the Pennsylvania."

Mr. Edward Winter, it is announced by Messrs. J. P. Morgan & Co., on behalf of the Northern Pacific reorganization, has been selected for the presidency of the new Northern Pacific Company. Mr. Winter is general manager of the Chicago, St. Paul, Minneapolis & Omaha Railroad Company.

The New York Central Railroad is experimenting with a new motor, the power, instead of electricity or compressed air, being hot water in supply boilers under high pressure. "The system, if successful, will be introduced first on the suburban service."

Miscellaneous.

Forest fires are raging on all parts of the Isthmus of Tehuantepec, Mexico. Thousands of acres of coffee, cotton and tobacco plantations have been burned over and several railway bridges completely destroyed.

The government has abandoned efforts to place a lighthouse on Hatteras Shoals, and $200,000 voted by Congress for that purpose has been returned to the authorities. Instead, a lightship, to be the largest on the coast, with steam power if she should go adrift, will be stationed on the shifting shoals, which extend nearly ten miles out to sea. A siren, which can be heard twenty miles, and lights that can be seen fifteen miles, are proposed.

The formation of the New York Telephone Company last week, according to a Wall street authority, "is a substitute for the agreement made in 1879 between the Western Union Telegraph Company and the Bell Telephone Company. The new deal, it says, differs from the old in the fact that it is made by individuals of the two companies instead of between them as companies. The agreement of 1879 will expire on November 10 next, and the fear of adverse decision in the Berliner patent suits has forced the Bell Telephone Company into the new agreement."

The first move of foreign countries who will participate in the International Universal Postal Union to be held at Washington, D. C., May, 1897, was made apparent at the Post Office Department Wednesday on the receipt of a proposition on the part of Austro-Hungary to reduce and simplify the transit rates on mail matter between countries. Other propositions are looked for.

Stockholders of the American Telephone and Telegraph Company have voted to ratify the resolution of the board of directors, recently adopted, "to add $8,000,000 to the capital stock." The capital stock was $12,000,000, and it is now made $20,000,000. "The addition is to meet requirements because of the increased business and field of the company."

The New York *Bankers' Magazine* says: "Balances between nations are still paid by the actual transfer of gold from one to the other, but the system has reached the point among the nations of Europe that no gold is drawn from their reserves unless to pay trade balances that cannot be settled by bills of exchange or in any other way."

The San Francisco *Call* says: "Every student of American history knows that by ukase in 1822 the Emperor of Russia asserted his ownership of the whole northwestern coast of America, from Behring sea southward to 51 degrees north latitude, and warned all foreigners not to come within 300 miles of the coast, and that this country's protest and the negotiations which followed resulted in the line of demarcation being fixed at 54 degrees 40 minutes."

Professor Jordan, of Stanford University, who has been placed at the head of the new seal commission, which was created by the last Congress, arrived in Seattle from San Francisco June 22 and went to the Rainier Grand, "where he became acquainted with the British and Canadian commissioners, who will accompany the commission north."

"The Blue Book of American Shipping" is a handsome volume of 325 pages. One feature is that it combines in compact form all available information of the shipping and shipbuilding business of the great lakes, giving cost of operating lake steamers and their performance in a mechanical line. In addition to the three chromotype inserts, there are over forty pages of illustrations, showing modern lake steamers, dock equipment, etc. The Blue Book is published by the *Marine Review*, Cleveland, Ohio.

Foreign.

The Australasian colonies are making efforts to increase their output of coal and to compete with the mother country in Eastern markets. The richest coalfields hitherto worked are in New South Wales and New Zealand, but the people of Victoria are taking steps to bring about a large development of the Gippsland field, within 100 miles of Melbourne.

John M. Douglas & Co., London, write: "Mining goes on more actively than ever. One hears of the agents of the greatest houses of the world searching America, Africa, Australia, and of late New Zealand, for new good mines, buying only the choicest, not to "float" for companies, but to work for their own profit—gold, silver and copper, or whatever pays. Strife in South Africa has somewhat hindred progress, but real work, and much preparation for more, goes on all the time. Indian mines are doing well. New Zealand has found some very fine new gold mines. The latter are likely to be largely dealt in here if reports of them be confirmed. West Australia has been laid hold of by the greatest crowd of promoting companies ever seen."

Secretary Olney this week received the following dispatch from the secretary of the United States legation at Tokio: "Deaths caused by tidal wave estimated at over 30,000. In reports to date (21st), no mortalities among Americans."

A Madrid dispatch says: "In addition to the 40,000 troops which these dispatches have heretofore announced would be sent to Cuba in September, 40,000 will be dispatched in October, and 20,000 more before January."

The International Telegraph Conference, at Budapest, has agreed to-day to defer fixing the date of the introduction of the new vocabulary until the next conference. Among those entering into this agreement were Messrs. Barber and Burt, representing the Anglo-American Cable Company; Messrs. Underdown and Oscar Moll, representing the Direct United States Cable Company, and Mr. Von Chauvin, representing the Western Union Telegraph Company.

The strike among the St. Petersburg factory operatives continues to spread, and now numbers 40,000, consisting mostly of employees in the cotton mills. "Many of them are women. Thus far the strikers have acted in a peaceable manner. They demand increased pay and shorter hours. The police declare that Nihilists instigated the trouble. Several employers are willing to concede the demands of the strikers, but the police forbid them to do so."

An English paper says: "With regard to cycle companies, 'the cry is, still they come.' This is all very well in the case of those with established and profitable businesses, and in some with new and important features, for the export trade is only just beginning. An influential shipper to Australia says that the cycling fever has broken out there, and that it will soon become an epidemic."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Sale—Agent—Undisclosed Principal.

The Supreme Court of Massachusetts held, in the case of Foster vs. Graham, that an action could be maintained by an undisclosed principal in his own name for goods which were sold by his agent.

Architect's Liability—Misstatements.

The Supreme Court of Massachusetts held, in the recent case of Corey vs. Eastman, that an architect was liable for misstatements of the amount of work done under a building contract by the terms of which partial payments were made from time to time upon the architect's certificate.

Partnership—Assumption of Debt.

The managing partner of a commercial partnership has no authority, without the consent of the other members of the partnership, to assume the debt of a third party and bind the partnership to its payment, according to the decision of the Louisiana Supreme Court in the case of Sentell et al. vs. Rives et al.

Trade-Name—Injunction.

The Kentucky Court of Appeals held, in the recent case of Dewitt vs. Mathey, et al., that the plaintiff and his predecessors in business having for more than thirty years conducted a saloon in a particular building under the name of "The Saratoga," and plaintiff having purchased from his immediate predecessor the right to the use of the word "Saratoga" as a business name, title, trade-mark and brand for goods sold under that name, he had the right, upon moving his business into another building, to continue the use of the trade-name and trade-mark, and in an action brought by him the chancellor properly enjoined the defendants, who had moved into the building formerly occupied by the plaintiff, from using the same business title in conducting a like business, the name used not being merely the name of a locality or building, where the business was transacted.

Manufacturing—Stockholders' Liability.

The Supreme Court of Minnesota held, in the recent case of The Hastings Malting Company vs. Fay Armstrong Cork Company, that the general nature of the business of the defendant corporation, as declared by its articles of incorporation, being the manufacture or brewing of lager beer and selling and disposing of the same, together with such other business as may be incidental thereto, it was exclusively a manufacturing corporation, and its stockholders were not liable for its debts beyond the amount due on their stock subscriptions. The court further held that a corporation, unless prohibited by some constitutional or statutory provision, may, in good faith, issue paid shares of stock for the purchase of property at a fair valuation, and in such case both the corporation and its creditors will be bound thereby, but that if there is a material overvaluation of the property to the knowledge of the contracting parties, the transaction is fraudulent as to subsequent creditors of the corporation without notice, and if it becomes insolvent the shareholders so paying for their stock will be charged in favor of such creditors with the difference between the real value of the property and the par value of their stock.

Insurance—Bond—Stipulation.

The Supreme Court of Georgia held, in the recent case of Dorsey, Receiver, vs. Fidelity and Casualty Company of New York, that where a fidelity insurance company by its bond covenanted with a receiver engaged in operating a railroad that, during the continuance in force of such bond, certain specified employees of the receiver should "faithfully and honestly discharge their duties, in their several capacities, and shall also faithfully and truly account for all moneys and property in their respective employments, whenever thereto required by the employer, or a duly authorized officer in that behalf, and at the termination of their said employments shall surrender and deliver up to the employer, or a duly authorized representative, all moneys, books, vouchers, papers, tickets, and all other property belonging to the employer, or for which the employer shall be liable to another, or other party or parties, which shall then be, or which ought to be, in the hands, possession or custody of the employees, or either of them, and the company hereby indemnifies the employer against all loss which the employer shall sustain by reason of the default of any or either of the employees in the premises, not exceeding in the whole the sum or sums as hereinafter provided," the insurance company was not liable to the insured in damages for a loss resulting from a wrongful delivery of freight by one of these employees, in consequence of which the receiver was compelled to pay the value of such freight to its true owner, the wrongful delivery having occurred before the bond was executed. The court said that this was so, notwithstanding that the employee, at the termination of his employment, though liable so to do, failed and refused to pay the receiver the damages which the latter had sustained because of such wrongful delivery.

Insurance—Life Tenant—Indemnity.

The Massachusetts Supreme Court held, in the recent case of Harrison vs. Pepper, that a life tenant is not bound in law to insure the premises for the benefit of the remainderman. This was a bill in equity by a remainderman under a will to have the defendant, the life tenant, ordered to hold the proceeds of an insurance policy, which was payable to herself, in trust for plaintiff, until defendant died, the income to be payable to her until that event happened. The policy of insurance was taken out by the life tenant, and the house upon which it was placed was a total loss. The court held that it could make no difference in favor of the plaintiff; that the amount of indemnity to defendant was more than her interest, nor could defendant be converted into a trustee for the plaintiff by the mere fact that the amount which she received was equal to the full value of the house which was destroyed. The court also held that the insurance money did not take the place of the property which was destroyed, for the reason that the contract of insurance is a personal contract for the indemnity of the insured.

Insurance—Application—Rescission.

In the recent case of Crutchfield vs. Daily, the Supreme Court of Georgia held that no consideration is essential to the rescission of a simple executory contract—that is, one which has not been acted upon—other than a mutual agreement of the parties that it shall no longer bind either of them, the consideration on the part of each being the other's renunciation; that, therefore, if a written application for a life insurance policy and a promissory note for the first premium thereon were delivered to an agent of the insurance company and by him forwarded to the company, but before the latter had acted upon the application it was mutually agreed between the applicant and the agent that the note should be recalled and returned to the applicant, and that "the affair will stop just where it is at, there will be nothing more of it," this of itself would be sufficient to constitute a lawful rescission, and it was error to charge in effect that a rescission could not be had under these circumstances unless based upon a valuable consideration; and that, on the trial of an action upon such note, a policy of insurance alleged to have been issued in pursuance of the application above mentioned was not admissible in evidence without proof of its execution, and it was not sufficient for this purpose merely to prove by a subagent of the company that he had received such a policy from another sub-agent or from the company's general agent, the witness being unable to remember from which of these persons it came into his hands.

Arbitrators—Umpire—Contract.

The Kentucky Court of Appeals held, in the recent case of The Allen-Bradley Company vs. Anderson and Nelson Distilleries Company, that arbitrators have no power to select an umpire unless they are authorized to do so by the terms of the submission, and where an umpire is selected by them without such authority an award made by him is a nullity; that where arbitrators make an award as to matters submitted to them and the award also determines matters not submitted, the award as to the questions submitted will be enforced, but will be treated as void as to the matters not submitted, but that that rule had no application to the case, because the entire award was void, for the reason that it was made by an umpire who had no power to act; and that where the owner of four distilleries, in connection with which there was a well and pumping station, sold and conveyed to appellant one of the distilleries, and sold and conveyed to appellee the other three, also conveying the pumping station, and providing in the deeds that when the property "should be operated for use the cost of operation and the ordinary expenses of repairing incident thereto should be paid by the distilleries using the water from said pump-house in proportion to the quantity of water used, determined by the number of bushels of grain crushed," the appellant was not liable for any part of the expense of operating the pump-house during the time it did not obtain water from that source, although its distillery was in operation, as it had the right to obtain water elsewhere if it chose to do so.

BUSINESS NOTES.

A Big Peach Crop.

The Philadelphia *Ledger* says: "There is every prospect now that the peach crop this year will exceed the one of two years ago, when something like 9,000,000 baskets of fruit were shipped from Delaware. The growers estimate that the crop will be fully this large, while others say it may run as high as another million and probably two, providing nothing attacks the trees between now and plucking time, and the farmers are not looking for any such calamity. In Kent county, Md., which is a comparatively small peach belt, the crop is estimated by old growers to reach about 1,000,000 baskets."

Iron and Steel Wages.

A Pittsburgh press dispatch says: "The iron and steel sheet manufacturers treated the conference committee of the Amalgamated Association to an unpleasant surprise. The workers asked for a restoration of part of the 10 per cent. reduction made two years ago. Instead of getting it they were asked to accept another reduction. This time the manufacturers want to make the reduction in all departments. It will range from 17 per cent. for the rollers to 10 per cent. for the heaters, and less for shearmen and others, except day hands. After being in session all day and part of the night the conference committee adjourned. No date was agreed upon for another meeting. A strike is likely."

Argentine's German Loan.

The Philadelphia *Ledger* says President Crespo, of Venezuela, who is about to complete negotiations for a big loan from German bankers, has sent Dr. C. Bruzual Serra, present Minister of Public Works of Venezuela, to Germany, to make final arrangements. Dr. Serra sailed from New York on Saturday last for Berlin. "Under the present administration," said Dr. Serra, before he sailed, "the income of the public treasury is amply sufficent to cover, and even exceeds, the estimates for public expenses. Our army is upon an excellent footing, and we are strengthening our strategic lines of defense upon all our frontiers. The professional revolutionists, or Anarchists, have been effectually frustrated."

Maine Mutual Insurance.

The *American Agriculturist* says: "Mutual fire insurance companies in Maine are organized under the general law. Certain persons organize themselves together for the purpose of mutual protection against losses by fire, choose their necessary officers, and apply to the secretary of state for a charter or certificate of incorporation. In making application for a policy of insurance, each person applying gives his note for a specified sum—it may be $30, $50 or $100—which is termed a premium note. This note is 'payable in such installments and at such time or times as the directors of the said company may, agreeably to their by-laws and the laws of the state, require' for the purpose of paying the losses and necessary expenses of the company. Such notes form the capital upon which the company does business, and each policy-holder can only be responsible for the amount for which the note is given."

Handling Grain at Galveston.

Galveston is to have two new elevators. "One will have a capacity of 500,000 bushels, and the other will have a capacity of 100,000 bushels. The former will be used in the ordinary handling of grain, while the latter will be used for cleaning and conditioning such grain as may reach Galveston out of condition." The work will soon be commenced. The elevators will be owned and operated by the Galveston Wharf Company, and are to "be ready for use in about ninety days. It is announced that the Missouri, Kansas & Texas Railway Company has closed a contract to move 8,000 cars of wheat through Galveston. This will require 400 trains, but the elevator companies claim that with their improved facilities they will have no trouble in handling it at this end. The contract is one of the largest freight contracts ever made."

England and France and Africa.

A London correspondent of the New York *Tribune* reports that Lord Salisbury is about to hand over the Channel Islands to France, as he did Heligoland to Germany, the consideration being France's withdrawal from all interference in Egypt. The Philadelphia *Ledger* says: "This movement is in line with what appears to be Salisbury's policy—to acquire, if not the whole of Africa, at least so much of it as will make a belt of continuous British territory from Alexandria to Cape Town. England is thus reaching after the whole of Africa, while Russia is reaching for the whole of Asia, and it looks now as if both would succeed before very much of the twentieth century has lapsed. As for the Channel Islanders, they are French in race and sentiment, and would welcome the change."

Canning Horse Meat.

One of the dangers that threatens the American meat trade with Europe is loading invalided omnibus horses of London for Rotterdam and Antwerp, where they are converted into "canned beef, which is retailed throughout Europe in sealed boxes with American labels." This industry is calculated to ruin the American export meat trade.

Mexico's Foreign Trade Returns.

The progress which Mexico continues to make is shown by the foreign trade returns for December and the first six months of the current year. "The imports, on a gold valuation, in December were $3,356,731, against $2,738,621 in December, 1894, a gain of $618,110, or nearly 23 per cent. The exports, on a silver valuation, totaled $8,614,358 in December, 1895, against $6,801,858, an increase of $1,812,500, or over 26 per cent. During the first half of the current fiscal year the imports totaled in gold $18,870,380 against $16,625,773, an increase of $2,244,607, or 13 per cent., while exports were, in silver, $49,692,988, against $39,298,644, an increase of $10,394,344, or 26 per cent. Of the increase in exports $4,796,418 was contributed by the precious metals and $5,597,926 by other articles."

California Almond Production.

The California almond crop in 1891 "was 1,000,000 pounds, and it is stated by the California State Board of Trade that the crop netted the growers more per pound than the price of the imported article, because of its superior quality. In that year the growers realized in the New York market 22½c. per pound for 'paper shell,' 16c. for 'soft shell,' and 12c. for 'hard shell' varieties. The importation of almonds, however, continues to more than keep pace with increased production. In 1855, according to the report of the Commissioner of Patents, almonds to a value of $250,000 were imported, while in 1891 the importation had increased to 7,497,193 pounds, valued at $989,966, and in 1892, 6,731,015 pounds, valued at $995,764. It will thus be seen that the production of almonds in this country does not exceed yet one-tenth of the quantity consumed."

Railway Building in China.

The struggle between British and French, or Russo-French, syndicates—competing for railway and other public works contracts in China—is being waged. The French, on the whole, says a London press telegram, "seem to be getting the best of it. The Pekin government, according to advices received in London and Paris, besides assenting to the construction of a narrow-gauge single line from Tungchow to the Tonquin frontier, where it will join the French line, have given the Russo-French syndicate contracts for a projected trunk line between Hankow and Canton. Nominally this big enterprise will be carried out by native contractors, but with French money and by French engineers. Ten civil and railway engineers have just left Paris for the East in connection with these contracts. On the British side contracts have been secured for railway extension from Tien Tsin to Pekin. German and American private enterprises in the new development of China are not heard of."

Growing Center for Grain.

The Washington *Post* says: "The growing importance of the port of Norfolk, particularly in the matter of the tremendous grain trade developed during the past few months, is causing railroads throughout the southeast to turn to Norfolk as the distributing point for southeastern exports. Close upon the heels of the big deal the Pennsylvania road is endeavoring to consummate, in order to secure terminal facilities there, comes the report that the Louisville & Nashville Railway desires to utilize the port as its eastern terminal. It is asserted on good authority that the road has entered into negotiations for a $30,000 option on water-front property on the western side of the Elizabeth, directly opposite Norfolk. This, together with the existing lines and the vast southern system, gives Norfolk direct communication with every part of the country, and will enormously augment exports from the port. The Pennsylvania belt line will tap the remotest trucking regions, and greatly facilitate the moving of garden truck for northern markets."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

A more hopeful feeling in trade circles within the past ten days, explained as due to the adoption of a gold plank at St. Louis, has been given undue weight. Interviews with merchants in staple lines at twenty-five of the more important distributing centers show that, aside from the increased strength of wool in the hands of interior holders (reflected at Boston and Philadelphia), an improved demand for hardware at Providence, for clothing and shoes at Baltimore, shoes and dry goods at Memphis, and in similar lines at St. Louis, there has been no improvement in trade. At Chicago there is a more hopeful sentiment, but no increase in business. A canvass of leading jobbers at important cities shows no expectation of a revival in general trade until after election, and at some points no real improvement is expected until next year.

On the Pacific coast, San Francisco continues to send increased shipments of flour to China, but reports the California wheat crop prospect less favorable. The outlook for wheat in Oregon and Washington is very favorable. There is, therefore, an almost uniformly favorable crop outlook, now that rain has appeared in Texas to relieve the cotton and corn crops, and there is a stimulated demand for anthracite coal and activity at shoe factories, with a good demand from jobbers. Relatively most confidence is shown in the outlook at Chicago, where a marked revival in trade is regarded, in some instances, as probable within sixty days. The point is made that whereas a year ago country merchants were adding to their stocks because of the then general advance in prices, to-day they are buying from hand-to-mouth, with stocks much reduced.

There are 218 business failures reported throughout the United States this week, a striking decrease as compared with a week ago, when the total was 265. One year ago the week's total was 215, three fewer than this week, but two years ago, in the midst of the extreme depression of 1894, the total number of business failures in the fourth week of June was only 189.

The volume of general trade is no larger than last week; in some lines it is smaller, notably at Pittsburgh and Kansas City. Midsummer dullness characterizes operations at almost all points. Relatively greatest activity has been among eastern dry goods jobbers, who have sacrificed prices to reduce heavy stocks of cotton goods. Restricted production of print cloths at Fall River is likely to be followed by similar action at Providence and at Augusta. New England rubber manufacturers are curtailing production, and the situation and outlook in the iron and steel industries is less satisfactory, with a prospective cut in the price of Bessemer pig iron, and the probability of the billet combination reducing quotations, and lower prices for coke. In addition, there are reduced prices for leaf tobacco, petroleum and cotton, for wheat, wheat flour, oats, pork, lard, sugar and coffee.

The failure of the sound-money victory to develop public or foreign interest in stock speculation has disappointed Wall street. Fears that free-silver ideas will govern the Chicago convention also have an unfavorable effect. The chief active influence in the week's stock market was a ten-point drop in Sugar Refining stock, produced by the weakness of raw and refined sugar. Insiders are credited with helping the decline, but the stock was supported at the lower level, and refined sugar is again advancing. There was considerable liquidation in the general railroad list, and prices are lower all around. The short interest tends to keep prices steady, and pressure has relaxed. Foreign exchange is weak on the absence of inquiry. Demand sterling is 4.88. Gold shipments for the week are $950,000, but it is thought the gold export season is over. London has not been a factor in the market; only professionals there will touch Americans in the present uncertainty about the currency. Silver is higher on speculative buying of silver bullion certificates in the New York market.

The total volume of bank clearings shows a material reaction from the aggregate a week ago, 13.4 per cent.—to $899,000,000. As compared with the fourth week in June, 1895, this week's total shows a falling off of 11 per cent., but it is 18 per cent. larger than in the corresponding week of 1894, although 6 per cent. smaller than in the like week of 1893, and nearly 13 per cent. smaller than in 1892.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal amount to 2,837,000 bushels, compared with 3,020,000 bushels last week, 1,946,000 bushels in the week a year ago, 1,717,000 bushels in the week two years ago, and as compared with 3,971,000 bushels in the fourth week of June, 1893.

Interest manifested in the election in the Canadian Dominion had the effect of greatly reducing the volume of trade. Manufacturers and traders are reported inclined to continue a policy of caution until the new political party in power announces its plans. Business at Montreal and Toronto is without other feature than that of quiet and restriction. At Halifax the outlook is unsettled, and unfavorable weather has had an effect upon current business. New Brunswick finds the demand for lumber better than expected. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $17,330,000 this week, against $19,090,000 last week, $19,659,000 in the fourth week of June, 1895, but as compared with $16,175,000 in the corresponding week of 1894. There are 19 business failures reported throughout the Dominion this week, as compared with 35 last week, and 28 in the corresponding week in 1895 and in 1894.

FINANCIAL.

The Money Market.

Dullness continues to prevail, and the expectations of a harder and higher loan market in the autumn has no tangible effect as yet upon rates at New York. Call money is abundant to 1½@2 per cent. No change has occurred in the situation as regards time money, which is in liberal supply, with a very slack demand at 3@4 per cent., according to length of time the loan runs. Commercial paper is quiet, with no special features either in the demand or supply, the rates quoted for best names and doubles being 4@4½ per cent.

Discount Rates and Exchange on New York.

The New York Banks.

Last week's receipts of cash from the interior were on a large scale, but were offset by payments from depositary banks to the Treasury on bond account and withdrawals in connection with gold shipments. The result was a decrease of $1,133,000 in cash holdings, the deposits decreasing $1,499,000. These were the only important changes. Loans increased $500,000, and the surplus reserve was reduced $758,800. The figures of the statement compare as follows with those of the preceding week:

	June 13, '96.	June 20, '96.	Changes.	
Loans	$474,278,300	$474,783,600	Inc.	$505,300
Specie	62,394,900	61,554,600	Dec.	840,300
Legal tenders	82,489,500	82,196,100	Dec.	293,400
Deposits	496,829,400	495,329,800	Dec.	1,499,600
Circulation	14,510,900	14,607,600	Inc.	96,700
Total reserve	144,884,400	143,750,700	Dec.	1,133,700
Reserve required	124,207,325	123,832,450	Dec.	374,900
Surplus reserve	20,677,075	19,918,250	Dec.	758,800

At the corresponding date last year the surplus reserve was $36,544,250, against $76,355,375 in 1894.

The Boston Banks.

	June 20, '96.	June 13, '96.	Changes.	
Loans	$161,753,000	$162,674,000	Dec.	$921,000

Legal tenders	5,960,000	5,851,000	Inc.	109,000
Surplus reserve	1,272,657	904,886	Inc.	367,771

Silver.

The conspicuous factor in the silver market this week was the speculative buying of silver bullion certificates on the New York Stock Exchange. It was reported that this was based on the idea that a free silver platform will be adopted at the coming Chicago convention. These purchases strengthened the market for commercial bars, which was also influenced by the alleged buying of silver for Japan in San Francisco. The quotation for bars in this market advanced from 68¾c. per ounce to 69¼@70c., and London, though somewhat backward, had a sympathetic rise from 31 7/16d. to 31 5/8d. The market there is favorably affected by the strong tone of India exchange on the issue of a new rupee loan in India. On Friday, however, both markets reacted slightly. Trading in bullion certificates for the week amounted to 1,299,000 ounces.

Foreign Exchange.

Although London has not been a factor in the stock and securities market this week, and there was no pressure of bills from that source, or, indeed, of bills of any kind, exchange has been weak and declining. The most significant feature was the absence of any active demand from remitters, the pressure to provide for interest or settlements falling due abroad on July 1 having virtually ceased. Posted rates remained at 4.88@4.89, and demand sterling, which was quoted 4.88¼@4.88½ at the beginning of the week, declined by Thursday to 4.88. It is, indeed, stated that some bills were offered drawn in connection with the payment for the recent purchase of a copper company here, and that this was the occasion for the decline in rates. On Monday $750,000 gold was taken from the Treasury and shipped by the next day's steamer. The fall in rates was thought to make gold exports impossible, and it was understood that the German demand for gold will now be supplied in London. On Friday, however, $200,000 was taken for export

to Europe to-day, and a shipment of $200,000 was also announced to Canada. The supply of commercial bills was notably better.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

June 20.	*June* 22.	*June* 23.	*June* 24.	*June* 25.	*June* 26.
4.88 @ 4.89	4.88 @ 4.89	4.88 @ 4.89	4.88 @ 4.89	4.88 @ 4.89	4.88 @ 4.89

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¼ @ 4.87½	4.87 @ 4.87¼	4.87¼ @ 4.87¼	4.87 @ 4.87¼	4.87 @ 4.87	4.87 @ 4.87⅛

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¼ @ 4.88⅜; commercial bills, 4.86½; francs, 5.16⅞ @ 5.15; reichsmarks, 95¼ @95¾.

The Bank of England discount rate remains at 2 per cent. The bank gained £77,000 in specie for the week ending Thursday last, and its proportion of reserve was 59.37 per cent., against 59.93 per cent. a week before. In the London open market discount is firm at 13/16@⅞ per cent., and call money harder at ½@¾ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending June 19, 1896:

	1896.	1895.
Dry goods	$1,151,657	$2,196,807
General merchandise	5,697,801	7,609,561
Totals for the week	$6,849,458	$9,806,428
Previously reported	230,088,777	241,787,532
Since January 1	$236,938,235	$251,593,960

The exports (exclusive of specie) from New York to foreign ports for the week ending June 23 were $437,837 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,580,286	$4,372,733
Previously reported	179,708,874	163,207,074
Since January 1	$187,289,160	$168,179,807

THE STOCK MARKETS.

The New York Stock Market.

Considerable disappointment was created by the failure of the public, either here or in London, to come in and buy our railroad and industrial stocks on the result of the St. Louis convention. Moreover, the apparent strength of the free-silver sentiment in certain sections, and the fear that this element will control the Democratic National Convention at Chicago, appears to have a further restricting influence, so that the New York stock market has been left entirely in the hands of professional interests. Many of the smaller operators of that class had bought rather too extensively in anticipation of a fair-sized rally, while the short interest had been virtually extinguished. The absence of buying support, combined with the circumstances in question, made a reaction in prices inevitable, and the close of the week finds the market generally lower, though prices are now steady at the decline, the creation of a new and fairly large short interest having a tendency to prevent declines for the moment, and even to create temporary rallies.

The week opened with a rather sharp liquidation of weakly-held long stock, brought about by a report that our relations with Spain in regard to Cuba were at a critical point. The break in the market on Monday revealed the fact that most of the active shares were honeycombed with stop orders, and the downward course of prices was only checked by covering of the short contracts, apparently put out by the same interests which had produced the war scare. There being no foundation for the latter, and the falsity of the reports being demonstrated, the general list had a tendency to rally. This, however, was checked by a bearish demonstration on Sugar stock, which for the balance of the week was the feature of the entire market. It broke with the others on Monday from 121⅞ to 118⅞, and continued its downward course till it touched 113 on Thursday. There was heavy liquidation in the stock, which the street was prompt to ascribe to the inside interest, though it would seem that the so-called pool is more likely to have realized profits on their speculative holdings when the price was above 120. Occasion for the break was furnished by the weakness in the raw sugar market, which suffers from the overspeculation induced by the war in Cuba and curtailment of its product. Refined sugar prices were reduced to correspond, and the trade reports were unfavorable to the trust, in view of its large holdings of raws. At the decline in sugar prices a demand seems to have developed, and on Friday all grades were advanced, while the buying of the company's stock on the lower level was pronounced better than the selling, and a rally set in which carried the price up to 114⅞. The stock, however, is very nervous and erratic, and the "street" is somewhat under the impression that it has been made the victim of another of the long list of manipulative "scoops" for which Sugar is famous, or infamous. On Friday, near to the close, covering by the shorts, enforced by manipulation, carried the price of Sugar up to 116⅛.

The activity in Sugar had a tendency to withdraw attention from other parts of the list. The pronounced declines early in the week were well distributed, but were most noticeable in the stocks that had been the subjects of the short-lived bull movement. St. Paul fell from 78¾ to 76½, Burlington from 79⅜ to 76, Missouri Pacific from 24¾ to 22¾, Atchison (which was sold by London) from 15¼ to 13½, and Louisville from 51½ to 49⅜. General Electric distinguished itself by declining from 33 to 29⅜ on liquidation of long stock, for which there was no market. There was a general recovery from these prices, and St. Paul in particular seemed to find support, based on the excellent crop reports from along its lines. Professional interests in London also seemed inclined to buy this stock, as well as Louisville, on declines, but the trading from that quarter was merely temporary turns, and advices from the other side show only too clearly that the public there is afraid to touch the American stock market. There was weakness in Leather preferred, and though the advance in coal prices and generally good condition of the coal trade creates a bullish feeling as to the anthracite stocks, it has not created activity or advances in them.

Boston Stock Market.

The general movement in stocks has been quiet, and values have shown an easier tendency. The most activity has been in Sugar, a heavy business being noted during the past three days, while the price at the close shows a decline of 9⅛ points for the week.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending— *Price June* 25, 1896.	*Price June* 18, 1896.	*Sales June* 25, 1896.	*Sales June* 18, 1896.

General Mention.

Messrs. J. P. Morgan & Co., of New York, Drexel & Co., of Philadelphia, and J. S. Morgan & Co., of London, announce that they will be prepared to advance in cash against such deposited general mortgage bonds of the Philadelphia & Reading Railroad Company, at their offices, on July 1, 1896, 15¼ per cent. on unstamped receipts, of which 13¼ per cent. equals the amount of coupons due from July 1, 1893, to January 1, 1896, with interest thereon at 6 per cent. per annum, to July 1, 1896, the coupons not to be extinguished, but to be kept alive for the purposes of the reorganization as provided in the plan, and 2 per cent. is for the coupon on the new bonds due July 1, 1892. The firms will also pay 2 per cent. on stamped receipts, which is for the coupon on the new bonds due July 1, 1896. Reorganization receipts must be presented in order that such advance may be noted thereon.

The Oregon Improvement Reorganization Committee, John I. Waterbury, chairman, gives notice that the time for depositing the bonds and stock of that company with the Manhattan Trust Company, of New York, and the Old Colony Trust Company, of Boston, under the plan of reorganization, has been extended to August 1.

TRADE AT LOW TIDE.

RESTRICTED PRODUCTION IN MANY LEADING INDUSTRIES.

BUYING TO MEET IMMEDIATE REQUIREMENTS CHARACTERIZES COMMERCIAL LINES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, June 26.—The tone of trade continues quiet, and in nearly all departments of the merchandise market business continues slow. The wool market shows a better feeling, but demand continues slow, and it looks as though no improvement can be looked for until goods begin to sell. Money is easy, but rates are quoted at 3½@4½ per cent. for call, with time at 4@5 per cent. Mercantile paper is quoted at 4½@5½ per cent., although good corporation paper has sold at 4½ per cent. The supply of new paper is not large, but there appears to be less inclination on the part of lenders to purchase. The boot and shoe market is quiet, but the tone is firm and the factories generally busy on previous orders. Leather is quiet but firm, with hides dull, but well maintained in price and in light offerings.

Providence, June 26.—A proposition originating at Fall River has been brought before the Providence cotton manufacturers looking towards a curtailment of the print-cloth production. No united action has as yet been taken by the Providence manufacturers. Fall River mills will shut down every other week during July and August. While there has been no improvement in business, there is a better feeling. A curtailment in rubber manufacturing at Bristol is announced. Hardware in some quarters is good, but in others it is quiet.

Philadelphia, June 26.—Wool sales continue light, and the textile industries are doing very little. The market for the better grades of leather and morocco is very dull, but the cheaper and medium grades find ready sale at fair prices. Boots and shoes are active; large orders continue to come in from out-of-town buyers. An improvement in tobacco is noted, though prices for domestic goods have not advanced as expected. Iron shows no improvement. There are no anticipations, even among the most sanguine, of any marked revival of trade for at least a year, although the tendency is believed to be one of progress toward a better condition than now exists.

Pittsburgh, June 26.—There is a more hopeful feeling, and the business done during the past week is, if anything, a little less than the week previous, weather conditions not being favorable. There is a fair demand for staples, but some cutting in prices is being done. Collections are reported only fair. Raw iron continues dull and prices are unchanged. Of course, more business is being done in that line, but sales are not large, and the business as a whole is not satisfactory.

Buffalo, June 26 —Careful inquiry in trade and financial circles fails to find any improvement in general business. The usual midsummer dullness prevails. Some claim that it is no worse than usual at this season of a presidential election year. A more hopeful feeling was expressed as soon as the strong financial plank adopted by the Republican convention was made known, and it seemed to meet with hearty approval by both Republicans and Democrats. Considerable unrest, however, is manifested, owing to the uncertainty of the action that will be taken at the Democratic convention. There is prevailing, to a certain extent, a belief that the sentiment in favor of free silver is growing in these parts, especially in the rural districts, and no great improvement is looked for until after election. Dry goods houses claim their sales are ahead of last year, but anticipate that business will move very slowly for the next few months. Saddlery and general hardware are doing a fair business. Anthracite coal is moving very slowly and lake freights remain weak.

Baltimore, June 26.—Business for the week has been very quiet. Clothing and boot and shoe salesmen are out on the road taking fall orders, and report they are meeting with encouragement. Good effects expected to result from the action of the St. Louis convention have been overshadowed by actions of conventions recently in different parts of the country, which seem to indicate a different financial policy.

West and Northwest.

Cleveland, June 26.—Trade continues quiet and unchanged.

Cincinnati, June 26.—General business continues without animation. Inquiry fails to develop improvement in business.

Detroit, June 26.—The trade situation here is without special feature. Business in general lines is fair. Collections are slow. There is a better feeling in money circles; supply and demand good.

Chicago, June 26.—There is no especial change in trade. This is the slow season of the year, and merchants are selling goods only in small lots, as interior retailers want them. There has, however, been a decided improvement in sentiment within the past week, and a more hopeful feeling prevails, which is expected to result in a better fall business inside of the next sixty days. Dry goods men report increased sales of fall goods, but in other lines sales are not as good as last year, at a time when prices in many lines were being advanced and buyers were loading up in anticipation of a further appreciation. Now they are only buying in a hand-to-mouth way. Stocks throughout the country are not large, and the tendency is to carry light lines. In leather it is between the seasons. The situation is healthful and prices are maintained. There is no change in iron and steel. Orders have not increased and the feeling is easy. Potatoes are not bringing freight charges, and a few instances are noted where the shippers have had to remit to pay the losses entailed. Eggs are higher, but other lines show no change. Wool receipts, 2,188,843 pounds.

Louisville, June 26.—Trade in general merchandise is quiet. There have been large sales of leaf tobacco. Prices are a shade lower. Collections are fair. Political developments thus far have had no effect in strictly commercial lines.

St. Louis, June 26.—Besides being between seasons, the month of June is always the dullest of the year with manufacturers and jobbers, but, all things considered, the volume of business is fair. Crop conditions are good in all sections now that rains are reported in Texas. A few staple houses are booking small orders for future delivery, but nearly all purchases are for immediate delivery. Iron bars are in better demand. Black and galvanized sheets are quiet. Tin and terne plates are too low for profit to manufacturers, and an advance is looked for. Hides are fairly active and firm. Leather is ordered sparingly, but prices are well maintained. Receipts of wool are light and the market is strong. Provisions firm, but not active. There is a slight improvement in trade sentiment in nearly all lines since the convention. Majority of business men, however, do not look for any marked improvement till fall.

Kansas City, June 26.—All lines of jobbing report no snap in business and trade not fully up to the average, with slow collections. Retailers express the same experience. General trade sentiment is that no feeling of improvement has shown itself in business recently, and that none is likely until after election.

Milwaukee, June 26.—The volume of business is considered fairly satisfactory and the outlook is more promising. Collections are somewhat slow.

St. Paul, June 26.—There is an increased demand for groceries, and hardware trade continues good. Outside of these lines trade is dull, though all report as much immediate business as is expected, and orders for later shipments are coming in steadily and bring trade for June somewhat above a year ago. Contrary to expectations, collections show no diminution.

Minneapolis, June 26.—Sales of general merchandise are very fair for the season, and collections are also fair. Flour is active, and the situation regarding lumber shows a little improvement.

Omaha, June 26.—In the grocery and boot and shoe lines trade has shown some improvement, but in other lines there has been no progress. Collections, while somewhat better, are hardly up to standard. The opinion generally prevails that the most necessary thing to the revival of trade in this western country is good crops and plenty of them.

Sioux Falls, June 26.—Beyond a brisk demand for Fourth of July goods, jobbing trade is very quiet. Retail trade is only reasonably good.

Southern Cities.

Charleston, June 26.—About the usual amount of summer trade is reported in all lines. Collections are still complained of as being slow.

Savannah, June 26.—Trade and collections for the week, both wholesale and retail, are dull. Receipts of rosin and spirits are about the same. Shipments of both are heavier, with a steady demand and low prices.

Atlanta, June 26.—Trade is quiet. Collections fair. There has been no perceptible change in trade circles.

Augusta, June 26.—General trade is featureless, dullness continuing. Collections are slow. Rumors of cotton mills closing for a couple of months are prevalent.

Jacksonville, June 26.—No change is noted from previous week.

Birmingham, June 26.—Summer quietness prevails.

Chattanooga, June 26.—Dry goods are dull, with low prices. Groceries are fairly active, and western meats find a good market here. Hardware is dull. Collections are satisfactory. No improvement has been noticed of late.

Nashville, June 26.—Trade continues quiet in all lines. Collections are favorable from nearby sections. In the cotton section payments will come on later. No revival in trade has appeared. The feeling has existed for some months, independent of political influences, that this fall would show satisfactory results from prosperous agricultural conditions in the south. Regular commercial demand for money is easily met by banks.

Memphis, June 26.—There has been some improvement in trade here. It is confined to no particular line, however, and is shown by expressions of belief that business generally will revive and improve after the November elections.

New Orleans, June 26.—Trade is about the usual summer average. There is only a fair volume of business in cotton and sugar, and rice rules dull. The export movement in bulk grain is moderate.

Galveston, June 26.—An easier feeling prevails among merchants in all lines. Trade in general remains dull in consequence of the continued drouth throughout Texas. Corn is conceded almost a total failure, and cotton is beginning to suffer.

Pacific Coast.

San Francisco, June 26.—Trade generally is dull and collections are slow. The produce market is steady, freight dull and flour shipments to China are increasing. The prospects for the wheat crop are not so favorable as previously reported.

Portland, June 26.—Trade in general for the last sixty days has been unusually quiet. Cannerymen and fishermen on the Columbia river have compromised on the price to be paid for salmon, and the canneries are now running. The prospects for a good wheat crop in eastern Washington and Oregon are very favorable. Collections are slow.

Seattle, June 26.—General trade is pretty good. Hardware continues good; groceries about the same as last week, and other lines hold up well for June.

Tacoma, June 26.—In retail dry goods, dealers report slight increase in business, on account of more favorable weather. Local trade generally is quiet. Crop prospects continue fine, and exports of grain for the coming season are expected to show a large increase over previous years. Collections in country districts are reported very slow.

Canada.

Toronto, June 26.—Wholesale trade is quiet, the movement having been curtailed in consequence of the elections. The demand is chiefly of a sorting-up character, and prices, as a rule, are unchanged.

Montreal, June 26.—The week's business has been curtailed by the giving up of Monday and Tuesday almost entirely to elections of members of Parliament, and some degree of anxiety is apparent as to what change may or may not be authorized by the new party in power. Until a definite announcement is made manufacturers are disposed to act cautiously. Crops look well, but rain is needed. Collections generally slow.

Halifax, June 26.—A local holiday and Dominion election day have had the effect of making the volume of trade for the week very light, and business matters will no doubt be very unsettled for some little time to come. The weather continues very unfavorable to the crops. St. John, N. B., reports produce and provision markets very dull, fair shipments of fish to the United States market, and the lumber market in good condition, with an active trade, although shipments are hardly up to the average.

Dry Goods.

The volume of business is seasonably quiet with agents, while jobbers are confining themselves largely to reducing supplies on hand and preparing for the semi-annual stock-taking. In order to get supplies down, prices are cut to make the goods attractive, and in this way a fair business is being done. Cotton goods have ruled easy, as a whole, and some leading lines of bleached goods have been reduced still further in order to clean up supplies on hand. Brown cottons are quiet, but hold steady, while a fair export business is in progress. Printed fabrics are being opened for fall in dark styles, at about the same prices that have ruled of late for spring fancies. Dress woolens are dull, with mill agents reporting a very slow business. Jobbing trade is also dull. Men's-wear woolens are dull, although some duplicate fall orders are occasionally picked up. There is but little attempt to show spring samples as yet.

Wool.

The volume of business shows a slight increase, but buyers are yet bidding below the market for any lines. The result of the St. Louis convention has made dealers a little firmer, and it looks as though the decline was checked. The strength comes largely from the interior, however, growers and holders in some sections having marked up prices ½@1c. per pound. The demand is yet light at the seaboard, and manufacturers show no inclination to buy wool until they can see a better demand for goods. A large part of the new wools coming in are consigned, and in many instances are accompanied by instructions to hold until after election. With no chance to replace their holdings at anywhere near the price that they would be forced to accept to sell their old wools, dealers are turning down offers that do not come within the general market range, where ten days ago the bids would have been accepted. Fleece wools are rather firmer, but the demand is flat. The supply of old territory wools carried over is large, but dealers are not disposed to sell any lower at present. Australian wool is steady, with a quiet demand. The London sales commence June 30, with about 300,000 bales to offer. Carpet wools are dull.

RAILROAD BUILDING IN 1896.

The records of the new railroad building in the United States in 1896, to be published in the *Railroad Gazette*, June 26, "show that 717 miles of road has been built in the first half of the year. The total is not very different from the amount of new railroad which has been constructed in the first half of any year, since the conditions in 1893 called a sharp halt in railroad building. Last year 622 miles of new road was built up to July 1, and the record in 1894, only 495 miles between January 1 and July 1 showed how decisively extension work had been stopped. Figures as to the new track built in the first half of the year for seven years past make some interesting comparisons:

1896.	1895.	1894.	1893.	1892.	1891.	1890.
717	620	495	1,025	1,284	1,704	2,655

"It will be seen how greatly railroad extension has been checked by the conditions of the past few years, and there are no substantial signs that any large relative increase is to be expected in the near future.

"Much the largest mileage credited to any one company, of the total given for the six months, is that built by the Kansas City, Pittsburgh & Gulf, nearly 140 miles, in Arkansas, Texas and the Indian Territory. The second longest line was built by the San Francisco & San Joaquin Valley road, 55 miles, in California.

"The detailed statement of the new mileage by states is as follows:

	1896.	1895.	1894.		1896.	1895.	1894.

METALS FOR COINAGE.

The Philadelphia *Ledger* says: "There is pending in the House of Representatives at Washington a resolution requesting the Treasury to make inquiries and experiments regarding the use of pure nickel, aluminium or other substances for minor coins of the United States, and their relative adaptability for the purpose. This inquiry, if authorized, will be made by the mint authorities. Director Preston has already obtained a few of the minor coins made from pure nickel which are used in Austria-Hungary, and has also some samples of aluminium. These will be subjected to tests for wearing capacity, retention of color and convenience in handling. The advocates of the resolution are not satisfied with the existing copper pieces of one and two cents. Their rapid change of color makes them inferior to nickel, and the belief is that pure nickel will be found superior to the composition now used in half dimes. If the Secretary of the Treasury should report in favor of the use of pure nickel, an effort would probably be made to authorize its exclusive use for minor coins in the future coinage of the United States. Aluminium is so light in weight that it would probably excite distrust at first among those receiving it, especially those who are not familiar enough with the existing coinage system to know that the minor coins possess an intrinsic value which is but a fraction of their face value. Hon. Bartlett Tripp, United States minister at Vienna, has made a report regarding the operations of the new coinage system in Austria-Hungary, which went into operation with the laws providing for the gold standard in 1892. Austria-Hungary began

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

the coinage of minor coins composed of pure nickel in October, 1892, from which date until January, 1893, there were coined and circulated 180,000,000 of 20-heller pieces at a nominal value of 36,000,000 kronen ($7,000,000) and 240,000,000 10-heller pieces of a nominal value of 24,000,000 kronen ($4,700,000). Regarding the success of the Austrian mint, Minister Tripp makes the following interesting statement:

"'The director and chief engineer of the Austrian mint states that pure nickel for minor coins has many advantages. It does not change color, it is very hard, and wears very well, yet it receives a beautiful, clear impression, works well in the presses, does not oxydize, feels soft and velvet-like to the touch, is strongly magnetic, and is in every way far superior to every other metal or combination of metals for minor coinage. The only possible objection to it which has been found in Austria-Hungary is that sometimes during the process of milling the edges of pure nickel coins, nickel dust is formed in the coining ring which adheres to the coins and sometimes dulls their brilliant surface. For this reason the authorities of the mint here advise minor coins of pure nickel to have smooth edges. The analysis of pure nickel as used for minor coins in Austria-Hungary is as follows: Nickel, 97.37 per cent.; cobalt, 1.30 per cent.; copper, 0.32 per cent.; iron, 0.80 per cent.; sitinium, 0.14 per cent.; carbon, 0.07 per cent. Excess of cobalt darkens the color. Excess of iron and cobalt makes the metal too brittle. The plates from which the pieces are coined must be exposed beforehand to white heat in closed furnaces in order to make them sufficiently soft.'

"The Austrian government makes no effort to proportion the amount of metal in the coins to their face value, but makes the lower pieces of comparatively higher value in order to make them large enough for convenient circulation. One kilogram of pure nickel is coined into 250 20-heller pieces or 333 10-heller pieces. The 20-heller pieces, therefore, weigh four grams and the 10-heller pieces three grams. One kilogram in 20-heller pieces will have a nominal value of 50 kronen, while in 10-heller pieces it will have a nominal value of 33 kronen 30 heller. The Austrian mint has made some coins for Servia containing 25 per cent. nickel and 75 per cent. copper, but Minister Tripp reports that 'this composition does not receive so good or so clear an impression as the pure nickel; it soon wears smooth, loses its bright color, is not at all magnetic, and does not work any easier or more advantageously in the presses.'"

INDUSTRIAL MISSOURI.

The *Age of Steel* says: "The seventeenth annual report of the Bureau of Labor Statistics of the state of Missouri, for the year ending November 1, 1895, includes in its interesting and valuable information a series of statistics regarding the several industries of the state.

"The progress of Missouri in industrial development has been steady and continuous. In husbandry, mining and in manufactures of various kinds, enterprise, if not noisy, has been busy. The resources of the state are rich and varied, and its location is geographically in favor of its being a center both of production and distribution. The city of St. Louis as the hub of the commercial wheel has beyond peradventure a magnificent destiny. It is patiently and unfalteringly climbing to commercial and industrial eminence, and the figures given in the report quoted are in evidence of its leadership in the immense territory it practically controls. In the table of statistics relating to manufactures, of a total of 864 corporations and private firms in the state, 580 are located in St. Louis. The capital invested in these manufacturing concerns in this city made a total of $64,539,206, out of a state total of $75,617,476. The value of machinery is placed at $10,978,386, out of a total for the state of $13,846,688. The selling value of goods made represented $89,727,625, out of a state total of $113,849,063. The wage earners in St. Louis made a roll call of 34,821, the total for the state being 43,006; the wages paid figured at $14,810,075, the total for the state being $17,854,028, and the horse-power employed, of a state total of 67,012, St. Louis had a quota of 54,506. The factory inspection of 600 establishments in eight cities showed a roll call of 15,877 men, 10,517 women, 1,431 boys over 12 and under 18 years of age, 1,590 girls over 14 and under 18, ten boys under 12 and 88 girls under 14. There were 554 establishments in operation on full time, 45 less than full time, and one closed entirely; 252 with full force, 179 with less than full force, and 169 part of the time with full force of employees.

"The leading place occupied by St. Louis in the commercial and industrial factors in the state is set forth by the above figures. As a distributing center of goods manufactured in other states the values represented would make an enormous total."

OIL PRODUCTION IN INDIANA.

Mr. W. S. Blatchley, state geologist of Indiana, writes: "Within the past two years the production of petroleum has attained enormous proportions in Indiana. The area in which the oil is found has steadily increased, and to-day comprises parts of Adams, Wells, Huntington, Grant, Blackford, Jay, Randolph and Delaware counties. In addition, a few flowing wells are in operation in the city of Terre Haute, but repeated drilling has failed to locate any extensive field in Vigo county. During the year 1895 2,711 new oil wells were completed in the state. Of these 754 were dry. The aggregate initial output of the productive wells finished during this year was 46,342 barrels daily. If this initial output had kept up for a year it would have resulted in the enormous total of 16,914,830 barrels. But the spouting of an oil well soon ceases, and the average output is thereby rapidly diminished.

"The total production of oil in Indiana has increased from 33,375 barrels of forty-two gallons in 1889, and 3,688,666 in 1894, to 4,380,000 in 1895. The value in 1889 of the product was $10,881, in 1894 $1,774,000 and in 1895 $3,109,800. The average price per barrel in 1889 was 32⅝c., in 1894 48c. and in 1895 71c. The probabilities are that the area of territory productive of oil will continue slowly to spread to the west and south until it finally embraces the greater part of the area at present yielding natural gas. This has been, in general, the history of other gas and oil fields, and there is no known reason why the one of Indiana should prove an exception. The oil, on account of its much greater specific gravity, underlies the gas in the area where the two are found together. As the pressure of the gas gradually decreases on account of a diminution of the supply, the hydrostatic pressure of the oil in time overcomes that of the gas, and a spouting or flowing well of oil results. How much oil there is beneath the surface of Indiana is a question that no man can answer. How long the supply will last depends wholly upon its amount and the average daily or yearly drain therefrom. Suffice it to say that the supply is limited, and will never be increased. The age of a productive oil well in the United States does not generally exceed five years, and is often less."

THE BRITISH STEEL INDUSTRY.

In the London *Iron and Steel Trades Review* is published some figures showing the course of three of the largest branches of the British iron and steel industries in 1895—Bessemer steel, open-hearth steel and tinplates. "The production of each description for the last two years appears to have been as under:

	Tons	
	1895.	1894.
Bessemer steel	1,535,223	1,535,364
Open-hearth steel	1,724,737	1,575,318
Tin and terne plates	490,982	478,928

These figures show that while the Bessemer and tinplate industries have been practically stationary, the manufacture of open-hearth steel has made notable progress, and now leads that of Bessemer steel by a substantial figure for the first time in the history of the steel trade. This, of course, is a condition that applies only to the United Kingdom, since the manufacture of Bessemer steel in all other countries is largely in excess of the output of open-hearth steel. The Bessemer steel industry got a long lead of its rival. In 1880 we produced 1,044,000 tons of Bessemer and only 251,000 tons of open-hearth steel. In 1887 the open-hearth output had risen to 981,000 tons, but the Bessemer product, which amounted to 2,064,000 tons, was still a long way ahead. There was, however, a steady gain from this point by the open-hearth manufacturers, who got up to 1,564,000 tons in 1890, while the Bessemer steel industry turned out 2,015,000 tons. Since then the output of Bessemer steel has considerably declined, while the output of open-hearth steel until the present year has been almost stationary. The output for the period has been as under:

	Bessemer steel. 1=1,000 tons.	Open-hearth steel. 1=1,000 tons.
1891	1,642	1,514
1892	1,501	1,419
1893	1,493	1,456
1894	1,535	1,575
1895	1,535	1,724

"This is a very remarkable record, and shows that the one description of steel must have largely displaced the other. It would take us too far from our immediate subject to discuss the causes of the change. It is believed by some to be due largely to what is still regarded as the uncertainty and treachery of Bessemer steel, although the initiated are perfectly well aware of the fact that the product is employed in Sheffield for purposes that demand the utmost care and confidence, and such works as those of Sir Henry Bessemer & Co. will undertake to turn out Bessemer steel, whether as forgings or as castings, for any purpose, and to meet the most rigid requirements, owing, of course, to their extremely capable and careful methods. But the development of the open-hearth process is largely a function of the great improvements that have been introduced during late years in the process of manufacture and treatment. So far have these proceeded that there is now very little difference in the cost of producing steel by the two processes, and the greater encouragement given by shipbuilders and others to the open-hearth product has stimulated its growth to a considerable extent at the expense of the other."

"A MENACE FROM JAPAN."

The *American Manufacturer* says: "The National Association of Manufacturers in the Chicago convention held last January requested Congress to undertake an inquiry respecting the alleged menace to American industry from the recent remarkable industrial development in the Orient, and particularly in Japan. The Ways and Means Committee of the House began this investigation, and the result of its efforts were presented to the House in a report, by Mr. Dingley, last week. The report says the sudden awakening of Japan from the Oriental slumber of centuries is being followed by an equally rapid 'westernizing" of her methods of industry; that while the Japanese do not have the inventive faculty of Americans, their imitative faculties are wonderful. Their standard of living would be regarded as practical starvation by the workmen of the United States, and hours of labor average 12 a day. Such skilled workmen as blacksmiths, carpenters, masons, compositors, tailors and plasterers receive in Japanese cities only from 26c. to 33c., and factory operatives 5c. to 20c. per day in our money, and nearly double those sums in Japanese silver money, while farm hands receive $1.44 per month.

"It seems that Europeans and even Americans are recognizing this promising field for investments and factories. The report states that 61 cotton mills, controlled ostensibly by Japanese companies, but promoted by Europeans, and several small silk factories are in operation. We recently referred to the watch factory recently established in Japan by Americans and with American machinery, although the stock is held in the names of Japanese, as foreigners will not be permitted to carry on manufacturing in their own names until 1899. The report in conclusion states that it is probable that the rapid introduction of machinery into Japan will within a few years make Japanese factory products, especially fine cottons, silks, and other articles in which labor cost here is an important element in production, a more serious competitor in our markets than the products of Great Britain, France and Germany. The only remedy known to the committee to prevent this competition is a protective tariff. While there is no immediate danger to American industries from this quarter, the report of the committee is of great interest. When the subject was first brought up there were many inclined to laugh it off. But this investigation shows that there is something to fear from the Orient, and it is well to know the facts in time."

GUIDE TO SAXON INDUSTRIES.

The United States consul at Chemnitz writes to the State Department that "the Export Union of Saxony is preparing a new guide or address book covering the exporting concerns of this kingdom and Thuringia. It is to contain the names of all the firms whose capacity and character can be commended. Six hundred of the leading houses have already signified their intention to take part in the work of advertising and distributing the book. Saxony is the most important industrial state in the empire; hence, such a book or guide will be well suited to aid not only buyers from beyond the sea, but those who are or would be willing to send orders from Russia, Spain, Italy, Holland, Belgium and the Scandinavian peninsula. Like the address book referred to in the foregoing report, this guide is to go out in four languages—English, German, Spanish and French; hence, it will be well adapted to help trade extension in the countries where those languages are spoken. This book, like the empire's address book, is to be circulated by the imperial consuls and by the hundreds of correspondents which the union has in all parts of the world. The very fact that Saxony has a good name as an industrial center is reason enough for furnishing the names of the firms that have laid the foundation of her fame and whose energies are making permanent her renown.

"Competition is close; others are after the markets earned by Saxon endeavors. To keep what has been obtained and to get more are the ends aimed at by this book. It is to be a ready reference book in all parts of the world. The method maintained by the Germans for getting out and giving the world such books has in it much to commend it to Americans. While many things should and must be left to private enterprise, there are some things that require public or quasi public support. Here is an example. No one firm could carry it out at its own expense; hence the need of having it done by the Export Union."

FINANCIAL.

TO THE HOLDERS OF

GENERAL FIRST MORTGAGE AND LAND GRANT BONDS

OF THE

NORTHERN PACIFIC RAILROAD COMPANY.

Holders of over a majority in amount of the above described bonds having deposited same for conversion, on the basis set forth on page 12 of the plan and agreement of reorganization dated March 16, 1896, all other holders of such bonds who desire to avail of the privilege of conversion on the above basis are hereby notified to deposit their bonds at either of our offices on or before June 30th, 1896.

Reorganization Certificates will be issued for bonds so deposited.

The basis of conversion is 135 per cent. in the new 4 per cent. Prior Lien Bonds of the reorganized Northern Pacific Railroad (on which interest from July 1st, 1896, shall be adjusted quarterly in cash), with 3 per cent. in cash payable now on the old bonds for the interest due July 1st, 1896.

On July 1st, 1896, the basis for conversion of bonds not previously deposited will be reduced from 135 per cent. to 132 per cent.

Philadelphia & Reading

REORGANIZATION.

To Holders of Receipts for General Mortgage Bonds of

PHILADELPHIA & READING RAILROAD CO.

Issued by Central Trust Company of New York, (either "stamped" or "unstamped,") which have assented to the plan and agreement of reorganization dated December 14, 1895:

New York, Philadelphia and London, June 20, 1896.

Pursuant to the provisions of the above-mentioned plan and agreement (see pages 7, 21, 22), we shall be prepared to advance in cash, against such deposited General Mortgage Bonds, at our offices, on July 1, 1896,

15¼% on "unstamped" receipts, of which 13¼% equals the amount of coupons due from July 1, 1893, to January 1, 1896, both dates inclusive, with interest thereon at 6% per annum, to July 1, 1896 (the coupons not to be extinguished, but to be kept alive for the purposes of the reorganization as provided in the plan, page 3), and 2% is for the coupon on the new bonds due July 1, 1896.

2% on "stamped" receipts, which is for the coupon on the new bonds due July 1, 1896.

Reorganization receipts must be presented at our offices, in order that such advance may be noted thereon.

INSURANCE.

1850.——1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 4, 1896.

Chicago is the center of attraction just now, not only for citizens of the United States, but for those of other countries, for though the silver men are supposed to be in control of the situation as far as the organization of the convention and the declaration of its policy are concerned, there are still elements of doubt in the situation sufficient to render the proceeding of exceptional interest, apart from the effect they may have on the fate of a great historic party. Up to the present the tone of the silverites has been triumphant and the reverse of conciliatory, and if the outcome were judged from the standpoint of the dispatches of the last few days, the cause of sound money would seem to be a hopeless one. Whether this temper will continue to be the dominant one after the gold standard advocates from New York and the other states adjoining appear in Chicago remains to be seen.

Late advices from Chicago appear to indicate that the silverites are less insistent than they were upon carrying all the points of their programme. Without doubt some of them have been led to consider that while they may be able to dominate the convention, it may be found quite a different thing to secure the votes necessary to enable the candidate nominated to make a respectable showing in the election, not to say to win it. That the help of the eastern and northern states is not to be rejected if party success is aimed at the wiser leaders of the silver forces at Chicago seem to appreciate. There is a less defiant tone perceptible in the outgivings of the silver leaders during the last day or two, though, of course, it would be premature to hope that the sound-money propagandists have made any impression of importance upon the cohorts gathered under the lead of the silver fanatics of prominence. It will take some days' time to discover just in what proposal for governmental action the deliberations of the convention may find issue.

One thing that has somewhat puzzled the friends of sound money is the apparent attitude of ex-Secretary William C. Whitney, who is easily the most conspicuous of the leaders in the struggle to secure a rational declaration from the convention upon the question of the monetary standard. In his most recent interviews Mr. Whitney is quoted as expressing the most pessimistic views as to the outcome of the convention's work. He may be right in his forecast, but that is not the question. Earnest supporters of the gold standard are to be found who think that it would be better politics, at least, from the standpoint of ordinary men, to lock in his own breast the premonitions of approaching defeat, and leave the discovery that the task of fighting the silver men was a hopeless one to time. It is not generally thought wise to expose the weakness of one's position, and that is what a good many people think Mr. Whitney has done. It is good policy, from the combative point of view, not to regard oneself as beaten until the coup de grâce has been actually received.

Tariff revision is among the probabilities that Canadian business men may be called upon to face as a result of the recent election. It is not expected, however, that any effort will be made to revise the tariff at the short summer session of the Dominion Parliament. It seems to be regarded as probable that the period intervening between the present and the early part of next year will be taken up by a careful inquiry into the conditions of the industries to be affected by tariff changes. Though the legislation affecting the tariff is not to be undertaken immediately, it may, when it is framed, effect some important changes. It is not thought likely, according to present information, that the principle of protection will be entirely eliminated in the effort to bring the tariff rates to a revenue basis.

Among the international gatherings to be held next year, one of the most interesting will be the Postal Congress, which will meet in May next. This congress will meet in Washington, and it is expected that delegates from all the countries making up the postal union will be present. It is understood that the congress will continue its sessions for five or six weeks. There is no restriction upon the number of delegates who may be sent, but no country represented in the congress will have more than one vote. There are, it is said, fifty-three countries represented in the postal union, China, Corea and the Orange Free State being the only states of any consequence outside of the Union. Some regulations of importance are expected to be proposed to the congress which men concerned in postal administration believe will be one of much interest.

The law regarding filibustering has been much elucidated by recent decisions of the federal courts and charges of the judges in giving the cases to the jury. An illustration is found in the case of the Bermuda, some of those who sailed on the vessel being charged with aiding and abetting a military expedition to Cuba. The counsel for the accused said that there was no denial that arms and ammunition were shipped on the Bermuda, nor that men were taken on board, but the fact that this was done did not, he asserted, constitute a crime under the statute upon which the indictment was based. The judge, in charging the jury, said that it was no offense against the laws of this country to transport arms and ammunition or men, even on the same ship, to a foreign country, provided they were not a part of nor intended to form a part of a military expedition from this country, and that the fact of caution and secrecy being observed in the transportation should not be held to militate against the defendants. The essence and substance of the whole matter was, the judge said, whether there had been a military expedition from this country through the aid of the defendants, and unless the jury should find that a military combination had been formed in this country, and that the defendants had knowledge of the combination before the Bermuda sailed, they must acquit the defendants.

There were 78,330,773 pieces coined at the mints of the United States during the fiscal year just closed, the total coinage reaching a value of $71,188,468. The gold pieces coined numbered 3,584,760, and were valued at $58,878,490. The bulk of the gold coinage was of large pieces, there having been 2,593,723 double eagles coined, of the value of $51,874,460. Of silver there were 20,424,529 pieces coined, which were valued at $11,440,641. Of this amount silver dollars represented $7,500,822, the next largest coinage of silver pieces being of quarters, which aggregated in value $2,005,705. The minor coinage comprised 54,321,484 pieces, with a value of $869,337. For the six months ending with June showed a total value of $31,846,372; of $22,523,572 was in gold, $8,856,714 in silver, and $466,086 in minor coins. A feature of the showing for the year is the fact that the bulk of the coinage of silver dollars was during the last six months, all but about $400 having been coined during that period.

An account of the work of the Court of Claims is given in Washington dispatches. It appears that since the end of October last, when the court convened, under the general jurisdiction laws judgments were entered in favor of the claimants in 92 cases and 274 cases were dismissed. Under the act of February 13, 1895, authorizing the Court of Claims to grant new trials in a certain class of claims against the District of Columbia, judgments were entered in favor of the claimants in 15 cases and 11 were dismissed. Two hundred and nine cases referred by Congress under the Bowman and Tucker acts, being claims for stores and supplies alleged to have been furnished to the United States army during the late war, were finally disposed of. The decisions in 91 cases were in favor of claimants and 126 against them. Judgments were entered in 99 cases under the Indian Depredation act, being claims for damages sustained by reason of depredations committed by Indians, 12 of which were dismissed, and in 71 cases the judgments were in favor of the claimants.

National bank circulation outstanding at the close of the fiscal year ending with June amounted to $225,912,960, which represents an increase of $712,612 for the month and of $14,312,262 for the year ending therewith. The portion of the circulation based on the deposit of bonds amounted to $205,538,929, an increase of $323,090 for the month and of $19,476,831 for the year ending therewith. The portion of the circulation based on the deposit of money amounted to $20,374,031, an increase of $389,522 for the month, but a decrease of $5,164,569 for the year. The bonds on deposit to secure circulation as above amounted to $228,915,950, of which $151,950,450 consisted of 4 per cents of the funded loan of 1907.

Some startling information has come from the Far East, the announcement being made that Russia has intimated to Japan that she must withdraw from Formosa. The fact has attracted notice that Russia has massed at Vladivostock a strong fleet and 100,000 men and vast stores of war material. England is said to be recalling her inferior war vessels from the Orient and replacing them with stronger ones, but, nevertheless, is now spoken of as the third naval power in the Far East, Russia being the first, and the second being left unnamed. Russia's course is alluded to sarcastically in the Japanese press as a splendid policy of aggression. One journal says that Russia has practically turned Japan out of Corea, and declares that anything short of hypnotism of the most powerful order absolutely fails to explain why all the world stands with folded arms and in helpless apathy watches the development of the gigantic plans of Russia for the domination of the East. Evidently the fear of Russian aggression is becoming more pronounced in the East.

BUSINESS FAILURES FOR SIX MONTHS.

The regular semi-annual report of business failures to BRADSTREET'S, like similar exhibits in preceding years, covers by states and provinces, in the United States and Canada, mercantile, industrial and other embarrassments, but does not include any in which assets have been sufficient to meet liabilities. For the benefit of those not familiar with these particular reports, it may be well to explain that they include no business embarrassments of those engaged in agriculture, in any of the professions, or of individuals or corporations conducting transportation enterprises, or, it should be understood, financial embarrassments of those engaged as clerks in mercantile, financial or industrial concerns.

Statistics of business failures in the United States for six months of the calendar years 1879 to 1896, inclusive, are as follows:

	Number failures.	*Estimated assets.*	*Total liabilities.*	*Per cent. of assets to liabilities.*
1896	7,602	60,495,568	105,535,936	57.
1895	6,597	44,153,644	79,707,861	55.
1894	6,528	44,970,825	82,555,339	54.
1893	6,239	105,371,813	170,860,222	61.
1892	5,351	28,935,106	56,535,521	51.
1891	6,037	48,206,896	92,370,282	53,
1890	5,466	30,025,116	62,867,962	48.
1889	5,918	32,803,940	67,411,711	48.
1888	5,254	34,834,746	64,987,622	53.
1887	5,072	25,643,108	52,778,829	48.
1886	5,461	25,509,317	53,241,431	48.
1885	6,106	32,955,405	68,570,505	48.
1884	5,444	70,730,078	124,104,357	56.
1883	5,296	39,887,202	73,594,205	54.
1882	3,649	27,329,765	52,383,289	53.
1881	3,256	19,783,523	39,533,705	50.
1880	2,399	14,727,907	31,837,303	46.
1879	3,810	29,690,478	60,508,756	49.

The first six months of the current calendar year furnish a grand total of 7,602 commercial, financial and industrial failures in business in the United States. A reference to an accompanying table shows that this aggregate is larger than any like total in any preceding year. Compared with the first half of 1895 the increase is more than 1,000, about 15 per cent., but it will be recalled that in 1895, between March and September, there was a marked improvement in business. The increase as compared with the first half of 1894, when business was very dull, is slightly greater, amounting to 16 per cent., and compared with 1893, the year of panic, the increase is considerably greater, 22 per cent. The year 1892 was one of fairly prosperous business, one in which the ratio of commercial deaths to the total number in business would naturally be low. This is shown to have been the case by the fact that the total number of failures within the past six months was 42 per cent. more numerous than in the first half of 1892. As compared with the corresponding period in 1886, ten years ago, two years after the panic of 1884, the increase is 40 per cent.

The total liabilities of 7,602 firms, corporations and individuals which failed in business during the past six months amount to $105,535,000, or 31 per cent. more than in the first half of last year, which is in contrast with the increase of only 15 per cent. in the total number of failures. As compared with the first six months of 1894, a period of depression after the panic, total liabilities of failing traders and others during the past six months are 28 per cent. larger, although the number of failures during the latter half year was only 16 per cent. greater than in the first half of 1894. When comparison of liabilities is made with the first half of the panic year 1893, it is natural to expect a falling off, and such proves to be the case, total debts of embarrassed concerns during the portion of the current year which has elapsed being 38 per cent. smaller, notwithstanding an increase of 22 per cent. in number of failures. When, however, the contrast is made with 1892, a year of increasing business prosperity, aggregate debts of individuals, firms and corporations which have failed during the past six months are found to be 88 per cent. heavier, although the total number of such embarrassments is only 42 per cent. larger this year than in the first half of 1892. When one goes back to 1886, ten years ago, this year's increase is 100 per cent. as to liabilities, but only 40 per cent. in number of failures.

From this it will be perceived that something in the nature of panic conditions, although not manifesting themselves in that form, have evidently prevailed in the business world, inasmuch as excessive increases are shown in the ratio of estimated assets to total liabilities. When we compare the past six months with those one year ago assets are found to be 37 per cent. larger, while the increase of liabilities, as pointed out, is only 31 per cent. Comparing with two years ago, the increase as to assets is 33 per cent., while aggregate liabilities gained only 28 per cent. When the contrast is made with the first half of 1893, when the panic naturally augmented liabilities abnormally, assets for the past six months are found to be 38 per cent. larger, while the liabilities are 38 per cent. smaller. Comparing with four years ago, the first half of 1892, assets are found to be 100 per cent. larger now than then, and liabilities only 88 per cent. larger, and when the contrast is made with the first half of 1886, the increase in assets is found to be 140 per cent., and in liabilities less than 100 per cent.

As has been pointed out in preceding discussions of similar subjects, one of the phenomena of panic periods has been an abnormal increase in the ratio of assets to liabilities. In periods of ordinary business prosperity the nominal ratio has been in the neighborhood of 50 per cent., but in periods of business disaster it has greatly increased, owing to the embarrassment of many concerns which under ordinary conditions would have found themselves able to tide over affairs and remain solvent. Thus, in the first half of 1884, which witnessed a panic in May, the ratio of assets to liabilities of those failing was 56 per cent. In corresponding periods of 1885, 1886 and 1887 the ratio fell to 48 per cent., and in 1889 and in 1890, years of revival in trade, it was also as low as 48 per cent. In 1891, during the first six months, in which were registered the consequences of the Baring collapse of December, 1890, the ratio of assets to liabilities advanced to 53 per cent., but with improving trade in the following year it fell off to 51 per cent. During the first half of 1893, in which the panic had two months in which to assert itself, this ratio advanced to 61 per cent., dropping to 54 per cent. in 1894, and not advancing beyond 55 per cent. in the first half of last year. With this explanation, the only comment necessary as to conditions affecting the business world in the past six months is that the ratio of assets to liabilities between January 1 and June 30, 1896, is fractionally in excess of 57 per cent. This has not been exceeded but once, and that in the corresponding period of 1893, within seventeen years. Total liabilities of failing firms, individuals and corporations in the first half of 1896—$105,535,000—have been exceeded twice only during the past seventeen years, the two panic years specified, when they amounted to $124,104,000 (in 1884), and to $170,860,000 in the first six months of 1893. The like is true of total assets of failing traders, firms and corporations for the half year just ended—$60,495,000—the corresponding aggregate for the first half of 1894 being $70,730,000, and for the first half of 1893 $105,371,000, as large a total as the aggregate liabilities during the past six months. Corresponding comparisons as to the total number of business embarrassments during the half year just ended differ, as already pointed out, the aggregate for 1896 being in excess of any previously reported total.

BUSINESS FAILURES IN UNITED STATES AND CANADA FOR SIX MONTHS IN TWO YEARS, WITH ASSETS AND LIABILITIES.

LONDON AND THE STOCK MARKET.

The most salient feature in the declining and liquidating stock market of the past week has unquestionably been the presence of foreign buying of our speculative stocks upon a scale which Wall street has not seen for a very considerable period. At the same time cable advices indicate that the American department has been the most active portion of the London Stock Exchange, and that dealings therein have for the time being eclipsed speculative interests even in the mining market. It is not claimed on any side that this buying for London account is the result of an increase of public or investing interest in our securities. Current estimates would put London's purchases in this market since last Saturday at somewhere in the neighborhood of 80,000 shares of various stocks possessing an international quotation. A certain proportion of these purchases have, it would seem, been transferred upon the books of the various companies for the purpose of shipment abroad, but there remains a strong belief in Wall street itself that the bulk of them are for speculative account, and therefore may be turned out upon our market should the hypothesis upon which bankers and professional dealers in the London market for Americans took them up prove to be unsafe or unsound. So far as can be learned from the press dispatches of the past few days, supplemented by inquiries among the leading Stock Exchange representatives of foreign interests in New York, it would appear that the persistent buying for European account on the decline in values here is the result of the utterances of the silver men themselves. They, indeed, have apparently done much to reassure the public abroad, because it is argued that if their views are the best in the way of argument that the advocates of silver have to show, it will not take much education to demonstrate how fallacious are the arguments by which they have been influenced. It would, indeed, seem that this feeling has to a very considerable extent taken possession of London and the other continental markets, making them for the moment turn to American securities as the most likely vehicle for profitable speculation, particularly as our own speculative holders seem so intent upon sacrificing values on the mere specter of a soft-money platform at next week's national convention. The movement, of course, has been subject to limitations. As already observed, there does not seem to originate any public demand abroad for our stocks. The theory that it is the result of buying by a group of powerful banking houses has some elements of plausibility. Among the features of the movement has been the fact that the foreign buying orders came in on what seemed to be a regular scale at declines, rather than with the irregular impetuosity which can be observed when the foreign public is taking a hand. For this reason a belief prevails in some quarters that the movement is speculative, and, therefore, unlikely to have a permanent effect upon values here, unless, indeed, the outcome of political events is of a decidedly favorable character.

At any rate the influence of the transactions in question upon the foreign exchange market has not been of a decidedly marked character. If London and the continent were taking our securities permanently on a large scale, it would scarcely be doubted that any such buying as that referred to above would be productive of a very considerable depression in current rates for demand sterling. Quotations in the exchange market this week have been, it is true, lower than for some time past, and the gold exports for the week, footing up a little less than $1,500,000, are below the average. At the same time it would not seem from the direct results in this connection that the market for exchange has been subjected to the pressure which would be indicative of a considerable and permanent foreign demand for our corporate securities.

TROUBLE FOR THE JOINT TRAFFIC ASSOCIATION.

Something that looks like a serious obstacle to the smooth working of the new Joint Traffic Association, or combination of the trunk lines and the minor roads in trunk-line railroad territory, has arisen. It will be recalled that several weeks ago a meeting of the board of presidents was held in New York, and that steps were taken to induce the Canadian Pacific and Norfolk & Western roads to become members of the combine and submit themselves to the jurisdiction of its board of control. The one on the north and the other to the southward of the association's lines were known to be drawing business away from the roads that had entered into the agreement, and were making rates that the associated lines, in obedience to the rules of their combination, were unable to meet. A committee was unable to argue with the disturbers of the railroad peace, and it was announced that both President Van Horne of the Canadian Pacific and President and Receiver Kimball of the Norfolk & Western gave some encouragement to the idea that their roads would join the others, or at least conduct their business in harmony with it.

Later developments have, however, failed to bear out these prospects. Some days ago Sir Charles Rivers Wilson, the present head of the Grand Trunk management, and a member of the committee appointed to labor with the recalcitrant, was quoted in an interview as saying that the Canadian Pacific had refused to bind itself in the way desired by the association. According to Sir Charles this action renders the position of the Grand Trunk in the combination an exceedingly difficult one. In fact, if he is not misquoted, it involves the possibility of his company's being forced to resume its independent attitude. At the same time the objects which the present trunk-line agreement seek to accomplish have no more steady and earnest supporters than the present Grand Trunk management, and there is no question in railroad circles as to the open and aboveboard nature of the measures which they would adopt in an emergency.

Another and even a more serious obstacle to harmony, however, was created by the Norfolk & Western. It is understood that the objection of its managers to formally entering into the arrangement was based on the fact that the road is under the guardianship of the United States Court, and that, as receivers, the management might be excused from taking part in an arrangement which had been assailed by the government on the ground of its illegality. The recent decision of Judge Wheeler, of the United States Court, in New York, on the application to declare the combination an illegal one, having been in favor of the association, might be supposed to make this objection of no force. The Norfolk & Western, however, maintains its attitude, and recently has issued a tariff from western points based on rail and lake rates. This move, though ample notice was given of it, was regarded as hostile to the Traffic Association, and in contravention of its managers' assurances that, while the road would not formally join the association, its operations would be in harmony with the combined lines. The important fact that the Norfolk road has appropriated to itself certain differentials without the sanction of the Joint Traffic lines, as was hitherto the custom, caused no small measure of dissatisfaction. The board of control has persistently declined to act on the complaint of the lines affected by the reduced tariff, but chiefly because it does not care to establish dangerous precedents just yet, and although certain modifications in a few rates have been made as a placatory measure, official notice of the cut has not yet been taken.

The idea that a committee of the trunk-line presidents, with Messrs. Wilson and Depew as leading members, should be authorized to represent the situation to the controlling interests in Norfolk & Western securities in London was one of the suggestions offered for the settlement of the question. A meeting of the presidents was held on Tuesday, at which, it is learned, hopes were still held out that the Canadian Pacific and Norfolk & Western might reconsider their determination. It is also stated that the subject of action by the association to enforce the provisions of the Interstate law and prosecute roads which violated it in their tariffs was under discussion.

MR. McKINLEY'S SPEECH OF ACCEPTANCE.

The silence of Mr. McKinley in reference to the question of a monetary standard during the period preceding his nomination has led the public to look with a greater degree of interest than usual for such expressions as he might deem it expedient to make in his response to the usual address of the committee appointed to notify him formally of his selection as the Republican standard bearer. The ceremony of notification took place on Monday last at Mr. McKinley's home at Canton. Naturally enough, the candidate gave prominence in his address to the policy of protection with which his name is associated. He declared that the home market must be "restored to its proud rank of first in the world, and our foreign trade, so precipitately cut off by adverse national legislation, reopened on fair and equitable terms for our surplus agricultural and manufacturing products;" that "protection and reciprocity, twin measures of a true American policy, should again demand the earnest encouragement of the government at Washington"; that "public confidence must be resumed, and the skill, the energy and the capital of our country find ample employment at home, sustained, encouraged and defended against the unequal competititon and serious disadvantages with which they are now contending," and that "the government of the United States must raise enough money to meet both its current expenses and increasing needs."

This declaration of principles was, of course, looked for from Mr. McKinley, whose advocacy of the protective policy and whose share in procuring the enactment of the tariff law of 1890 have caused him to be regarded as the special champion of protection. It is perhaps natural, also, that he should have given his references to the tariff policy of the party the first place in his address to the notification committee. His position on tariff questions has been known of all men, for a long time, and his declarations on this subject simply took the form of a condensed restatement. It is needless to say, however, that it is not this portion of his address that was looked for with most interest by the press and the public generally. His utterances and his action as a representative in reference to the question of the monetary standard left in the minds of most people a real doubt as to his position, which his policy of silence during the campaign for the nomination intensified. It is this part of his speech that has been looked for with most interest.

Mr. McKinley's declaration on the monetary question is somewhat general. He says that "the money of the United States, and every kind or form of it, whether of paper, silver or gold, must be as good as the best in the world. It must not only be current at its full face value at home, but it must be counted at par in any and every commercial center of the globe. The sagacious and far-seeing policy of the great men who founded our government, the teachings and acts of the wisest financiers at every stage in our history, the steadfast faith and splendid achievements of the great party to which we belong, and the genius and integrity of our people, have always demanded this, and will ever maintain it. The dollar paid to the farmer, the wage-earner and the pensioner must continue forever equal in purchasing and debt-paying power to the dollar paid to any government creditor."

In a subsequent passage the candidate refers to the declaration of principles made by the St. Louis convention as "direct, clear and emphatic," and as "too plain and positive to leave any chance for doubt or question as to their purport and meaning." Evidently, then, his attitude on monetary questions is, so far as can be gleaned from his speech, to be determined by the platform adopted at St. Louis, whose generality and reticence on important points have already been commented upon in these columns. Mr. McKinley promises, however, in accordance with the usual practice, a more formal reply to the notification committee, and for the appearance of this document we will have to wait for a more specific exposition of his views.

ONE OF THE VICTORS OF PEACE.

Milton's fine aphorism that "Peace hath its victories no less renowned than war" finds an impressive illustration in the gathering of scientists from all parts of the world at the busy Scotch city of Glasgow to celebrate the jubilee of a professorship. The recipient of this high honor, long known to the world as Sir William Thomson, and for the last four years as Lord Kelvin, has been professor of natural philosophy at the University of Glasgow uninterruptedly since 1846—a period of half a century. From the first, the young professor—he was only twenty-two when appointed to the chair—held high rank as an investigator of boldness and originality from the scientific point of view, but so many of his labors have borne fruit in their application to industrial uses that his career possesses an interest, from the utilitarian standpoint, such as can be claimed for comparatively few men of science, even in modern times,

when the applications of science to the everyday work of the world have become so frequent.

Lord Kelvin's first researches dealt with the mathematical theory of heat and electricity, a field allied to that in which many of his subsequent labors were performed. In 1852 was announced his discovery of the dissipation of energy, and subsequently he established the law of retardation in the transmission of electric signals. His researches in this direction bore practical fruit some time afterwards in his invention of the sensitive instrument known as the mirror galvanometer, by means of which it was made possible to send on a subsequent signal before waiting for the completion of a preceding one. Two decades later he invented what is known as the siphon recorder, which has replaced the galvanometer in ocean telegraphic work and is used in recording cable messages everywhere. It was largely owing to his investigations that the difficulties in the way of the successful operation of the Atlantic cable were overcome.

Not only electricians but seamen have reason to be appreciative of the services of the Glasgow professor. He has always been an enthusiastic lover of aquatic sports, and probably on this account mariners are indebted to his improvement of the compass, which has rendered his name familiar to sailors everywhere. Other services of his to navigation are found in his invention of a sounding machine which has been of great practical value in the safe navigation of ships, particularly in fogs and along shore in thick weather, his tide gauge, his tide predictor and his harmonic analyzer.

Some of his most recent work has been in connection with electricity, particularly in relation to the measurement thereof. In this field of work his five electric balances have made his name familiar to electricians everywhere. He was among the first to see the possibilities involved in the idea of converting the natural energy of Niagara Falls into useful electrical energy, and was made a member of a commission to consider the best means of bringing about the conversion. There can be no doubt of the services of Lord Kelvin both to science and to industry where the former touches the latter, and that those services were appreciated the attendance of distinguished scientists from all parts of the world abundantly testified; but it is curious that in his reply to many flattering remarks at the banquet given in his honor in the town he declared that one word characterized the most strenuous of the efforts for the advancement of science that he had made perseveringly during fifty-five years; that word was failure. He declared that he knew no more of electric and magnetic force or of the relation between ether, electricity or ponderable matter, or of chemical affinity, than he knew and tried to teach to his students of natural philosophy fifty years ago in his first session as professor. Whatever may be the venerable professor's view of his achievements in pure science, it is at any rate certain that he will be long remembered for his services along the border land of science and industry.

BANK CLEARINGS FOR JUNE.

Bank clearings for June foot up a larger than expected aggregate, exceeding as they do the total for May, 1896, by 1.5 per cent., and heavier, in fact, than in any previous month this year, with the exception of January. Total clearings for June at sixty-five cities amount to $4,285,617,108, or $67,000,000 more than in May, and only 2.4 per cent. smaller than in June a year ago, whereas the decrease in May this year from last was 13 per cent. Compared with June, 1894, the increase is found to be fully 19 per cent., and compared with June, 1893, the year of the panic, the decrease is 5.4 per cent. The gain in June a year ago over June, 1894, it may be recalled, was 22.4 per cent.

BANK CLEARINGS AT 87 CITIES FOR JUNE, AT 82 CITIES FOR THE MONTH AND FOR SIX MONTHS THIS YEAR AND LAST, AND AT 76 CITIES FOR FOUR YEARS.

* Not included in totals because comparisons are incomplete for four years. † Not included in totals because they contain other items than clearings.

The following table of percentages of increase and decrease during the first six months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5
May	Dec. 13.0	Inc. 25.0	Dec. 26.3	Inc. 4.6
Five months	Inc. 1.9	Inc. 12.5	Dec. 30.2	Inc. 1.2
June	Dec. 2.4	Inc. 22.4	Dec. 20.8	Dec. 8.1
Six months	Inc. 1.1	Inc. 16.5	Dec. 28.1	Dec. .2

The showings made by the various groups of clearing house cities during June and the first six months of the year compare with preceding months as follows:

	March, 1896.	*April,* 1896.	*May,* 1896.	*June,* 1896.	*Six mos.* 1896.
New Engl'd.	Dec. 1.5	Inc. .8	Dec. 8.4	Dec. 2.4	Dec. .7
Middle	Inc. 3.0	Inc. .3	Dec. 16.0	Dec. 3.2	Inc. 1.3
Western	Inc. 4.0	Dec. 1.7	Dec. 9.5	Dec. 4.4	Dec. 1.4
Northwestern	Inc. .2	Inc. 7.6	Dec. 4.1	Inc. 4.5	Inc. 3.1
Southwestern	Dec. 4.0	Dec. 4.0	Dec. 15.9	Dec. 7.2	Dec. 4.4
Southern	Inc. 11.9	Dec. 3.3	Dec. .6	Inc. .1	Inc. 6.6
Far-western	Inc. 1.1	Inc. 3.4	Dec. 2.7	Dec. 4.1	Inc. 2.6
Totals	Inc. 2.2	Inc. .9	Dec. 13.0	Dec. 2.4	Inc. 1.1
Canada	Dec. 2.5	Inc. .5	Dec. 6.3	Dec. 9.5	Dec. .9

In only two sections—the northwest and the south—have the clearings by groups of cities shown a gain over a year ago, the increase in the northwest being 4.5 per cent., and in the south a small fraction of 1 per cent. The heaviest decrease in any one group of cities is that in the southwest, 7.2 per cent. June decreases in other groups from a year ago varied from a falling off of 2.4 per cent. in New England and 3.2 per cent. in the middle states to decreases of 4.1 to 4.5 per cent. in western and far-western cities.

In considering totals by cities it is found that the heaviest June gains over a year ago have been confined largely to the west and northwest. Prominent among them are Omaha with an increase of 56 per cent., St. Paul with 10.7 per cent., Minneapolis with 9.8 per cent., and Cleveland with 15.4 per cent. Two other cities in which manufacturing is prominent are Buffalo, with a gain of 8.5 per cent., and Pittsburgh, which reports an increase of 6.5 per cent. Chicago reports an increase of 2.6 per cent. and Baltimore one of 4.1 per cent. Among the larger decreases may be mentioned Louisville with a falling off of 16 per cent., Philadelphia 10 per cent., Cincinnati 8.6 per cent., St. Louis 8.2 per cent., Kansas City 6.1 per cent., San Francisco 7.4 per cent., and New Orleans 8.5 per cent. New York shows a falling off of 2.6 per cent. and Boston one of 3.1 per cent.

In Canada, Montreal shows a decrease of 17.6 per cent., while Toronto gains 6 per cent. Total clearings at 65 cities for six months aggregate $25,563,366,722, an increase over a year ago of 1.1 per cent., a gain over 1894 of 15 per cent., but a decrease from 1893 of 17 per cent.

SMALLEST WHEAT STOCKS IN FOUR YEARS.

Stocks of available wheat east of the Rocky mountains, United States and Canada, on July 1 proved disappointingly large from the point of view of holders, though it seems strange that fault should be found with more than an abundance of a necessary article of food. Although smaller stocks are reported than on July 1, 1893 and 1894, the quantity now held is much larger than on like dates in years prior to 1893, and 7,419,000 bushels larger than one

year ago. On the Pacific coast the situation is more favorable to those looking for higher prices, as stocks on July 1 were smaller than on like dates for five years past.

As compared with one year ago, Pacific coast supplies show a falling off of about two-thirds, and as compared with two years ago the shrinkage in the volume of stocks of wheat is three-fourths. Notwithstanding this extreme movement, west of the Rockies, the proportion of wheat held there is so much smaller than that at the east that the grand total of available supplies on the 1st instant—63,281,000 bushels—is found to be about 5 per cent. larger than the quantity so held one year ago, although about 15 per cent. smaller than that reported two years ago, and 14 per cent. less than three years ago.

Details of stocks of wheat available, both coasts of the United States, together with those in Canada, on July 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
July 1, 1896	61,354,000	1,927,000	63,281,000
July 1, 1895	53,568,000	6,549,000	60,117,000
July 1, 1894	65,250,000	8,253,000	73,503,000
July 1, 1893	72,666,000	2,842,000	75,508,000
July 1, 1892	33,287,000	2,372,000	35,659,000
July 1, 1891	21,054,000	1,081,000	22,135,000
July 1, 1890	26,846,000	2,395,000	29,241,000
July 1, 1889	20,384,000	618,000	21,002,000
July 1, 1888	32,571,000	3,265,000	35,837,000
July 1, 1887	48,290,000	6,100,000	54,390,000
July 1, 1886	35,464,000	6,400,000	41,864,000
July 1, 1885	48,196,000	1,106,000	49,302,000

Decreases of stocks of wheat in the United States and Canada during June did not equal expectations, the shrinkage east of the Rocky mountains being only 7,419,000 bushels, compared with 10,807,000 bushels in June, 1895, and 13,365,000 bushels in June, 1893. As contrasted with June, 1894, however, this year's decrease is the larger, the month's falling off a year ago having been 6,566,000 bushels. On the Pacific coast the decline in visible supplies of wheat last month amounted to 629,000 bushels, about one-third the decline in June, 1895, but a falling off of 50 per cent. more last month than in the corresponding month two years before. The June record, therefore, in the United States and Canada, both coasts, is a falling off of 8,048,000 bushels, about two-thirds of the decrease in June, 1895, an increase 1,000,000 bushels heavier than in June, 1894, but not quite two-thirds the falling off in June, 1893, though an increase of one-third more than in June, 1892.

For the past six months the shrinkage of wheat stocks east of the Rockies has amounted to 36,395,000 bushels, the bearishness of which showing is indicated when that net shrinkage is contrasted with the net increase of available supplies in the latter six months of 1895, amounting to 44,110,000 bushels. This view is emphasized when the decrease of 36,395,000 bushels in the last six months is contrasted with a falling off of 60,139,000 bushels in the first half of the calendar year 1895, and with from 32,000,000 to 35,000,000 and 36,000,000 bushels in the corresponding portions of the calendar years 1892, 1893 and 1894. The total net decrease of wheat on the Pacific coast since January 1, 5,189,000 bushels, while in contrast with a decrease of 6,760,000 bushels in the first half of 1895, is a heavy drop in available supplies on that coast, in the face of a net increase during the latter half of 1895 of only 567,000 bushels. But in three out of the last five calendar years Pacific wheat stocks have fallen away during the first six months in excess of 6,000,000 bushels. In the first half of 1894 the shrinkage was much smaller, only about one-third as large. This year it is less than an average of the like falling off in 1895, 1893 and 1892.

The total net decrease in available wheat stocks, both coasts, United States and Canada, within six months ending June 30, is 41,584,000 bushels, compared with 66,899,000 bushels in the first half of 1895, 37,352,000 bushels in the corresponding portion of 1894, 38,525,000 bushels in 1893, and as compared with 42,524,000 bushels in the first six months of 1892. The total falling away during the past six months is, therefore, slightly heavier than the average shrinkage in the corresponding portions of 1892, 1893 and 1894. It is less than two-thirds of the decrease in the first half of last year, and is 3,000,000 bushels smaller than the total net increase in available stocks, both coasts of the United States and Canada, from July 1 to December 31, 1895.

The total quantity of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on July 1, added to available stocks in Europe, as reported to BRADSTREET'S, is as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
July 1, 1896	61,354,000	1,927,000	41,920,000	105,201,000
July 1, 1895	53,568,000	6,549,000	70,760,000	130,877,000
July 1, 1894	65,250,000	8,253,000	73,016,000	146,519,000
July 1, 1893	72,666,000	2,842,000	76,800,000	152,308,000
July 1, 1892	33,287,000	2,372,000	63,544,000	99,203,000
July 1, 1891	21,054,000	1,081,000	60,360,000	83,395,000
July 1, 1890	26,846,000	2,395,000	40,144,000	69,185,000

If to the foregoing totals of stocks in this country and Canada on the 1st instant there be added the total quantity of wheat afloat for and in Europe, the grand total of supplies so held is found to be 105,201,000 bushels, the encouraging nature of which aggregate is shown by the marked falling off as compared with like totals held July 1 in three preceding years. One year ago the corresponding total was 130,877,000 bushels, two years ago it was 146,519,000 bushels, and three years ago, on July 1, 1893, American, Canadian, afloat for and European stocks of wheat amounted to 152,308,000 bushels. This encouraging decline will be found due, on reference to the foregoing table, to decreased afloat stocks for Europe, together with quantities held in Europe, rather than to decreases of supplies on this side of the ocean. Thus, while the grand total on July 1, 1896, is about 25,000,000 bushels smaller than a year ago, European and afloat stocks of wheat are 28,000,000 bushels smaller than a year ago. While present supplies are more than 41,000,000 bushels smaller than two years ago, the proportion held in Europe and afloat therefor at this time is 31,000,000 bushels less than two years ago. European and American wheat stocks July 1, 1896, were about 47,000,000 bushels smaller than on July 1, 1893, but the European portion shows a falling off as compared with three years ago of 32,000,000 bushels, more than one-third of the whole.

The total supply of wheat at home and abroad, amounting to 105,201,000 bushels on July 1, 1896, is the smallest aggregate so held since July 1, 1892, when the total was 99,203,000 bushels. On the like date in 1891 the aggregate was 83,395,000 bushels, and in 1890 it was 69,185,000 bushels.

During July, 1890, American, European and afloat wheat stocks practically stood still, decreasing nominally 200,000 bushels. In 1891, with the advent of late heavy wheat crops in this country, supplies increased about 2,500,000 bushels, but months of July since witnessed decreases. In 1892 the falling off was slight, 200,000 bushels; in 1893 the decrease was not far from 1,300,000 bushels; in 1894 it was about 4,200,000 bushels, and in 1895 about 12,000,000 bushels. The outlook, therefore, with a continuance during July this year of the late tendency in the movement of wheat from and to market, is that American, Canadian, afloat and European supplies may drop below the 100,000,000 bushels point within the next thirty days, which would be the first time so low a total had been reached for four years.

Adding the total quantity of wheat available in Australia (cabled to BRADSTREET'S), we find the American, Canadian, afloat, European and Australian stocks aggregated 107,801,000 bushels on July 1 this year, against 136,677,000 bushels one year ago, 154,319,000 bushels two years ago, and 157,208,000 bushels on July 1, 1893.

WHEAT STOCKS IN THE UNITED STATES, CANADA, EUROPE, AFLOAT FOR EUROPE AND IN AUSTRALIA.

July 1, 1896	105,201	7,680	112,881	2,600	115,481

The grand total shown in the foregoing table at quarterly intervals during the past two years constitutes the most bullish exhibit concerning the world's total available stocks of wheat published within the period covered. The aggregate on July 1, 1896, 115,481,000 bushels, is compared with the highest total during the past two years, 204,853,000 bushels on January 1, 1895, the next smallest aggregates being on July 1 and October 1, the same year, in each instance less than 147,000,000 bushels. Three months ago the total was 159,975,000 bushels, and on January 1 this year it was 187,773,000 bushels, showing a drop of more than 72,000,000 bushels during the past six months. During the corresponding six months of 1895 the falling off was slightly in excess of 58,000,000 bushels.

* Decrease. † Increase.

THE GOVERNMENT BALANCE SHEET.

Complete statistics of the revenues and expenditures of the government for the fiscal year ending with June are now at hand in the Treasury statement made public on the 1st inst. The receipts for the month amounted to $27,794,219.45, which represents an increase of over $3,100,000 as compared with the preceding month, and of over $2,100,000 as compared with the corresponding month of the preceding year. The receipts from customs for the month showed a decrease of over $700,000 as compared with June, 1895, while the receipts from internal revenue showed an increase of over $1,500,000. Miscellaneous receipts showed an increase of over $1,400,000. The expenditures for the month amounted to $25,444,789.30, which represents a decrease of nearly $3,000,000 for the month, but an increase of over $3,700,000 as compared with the corresponding month of last year. Among the increases the most marked item is that under the head of civil and miscellaneous expenditures, where the increase is over $1,600,000. Another increase of consequence is on account of the navy, where the increase amounts to over $800,000. There was an increase of over $1,000,000 on account of pensions, and, in fact, all the other items showed increases, with the exception of that on account of the War Department, where there was a small decrease.

The receipts for the fiscal year amounted to $326,189,226.87, which represents an increase of nearly $12,800,000 as compared with the fiscal year preceding. The greater part of this increase was owing to a gain in customs receipts, those for 1895–96 being over $8,300,000 in excess of those for 1894–95. The internal revenue receipts showed an increase of nearly $3,100,000, and the receipts from miscellaneous sources showed an increase of over $1,300,000. The expenditures for the year amounted to $352,231,470.28, a decrease of over $3,900,000 as compared with the preceding fiscal year. There were decreases under all the heads but two, the exceptions being the expenditures on account of Indians, which increased over $2,200,000, and those on account of interest, which showed an increase of over $4,400,000. Civil and miscellaneous expenditures showed a decrease of over $6,000,000, those on account of the War Department one of nearly $1,000,000, those on account of the navy one of over $1,700,000, and those on account of pensions one of nearly $1,900,000.

As will be made clear by a comparison of the totals given above, the Treasury balance sheet shows an excess of expenditures over receipts amounting to over $26,000,000. This is a smaller deficit than was shown at the close of the last fiscal year, when the excess of expenditures over receipts amounted to over $42,800,000. During the month the interest-bearing debt increased $1,875,300; the non-interest-bearing debt increased $184,439.50, and cash in the Treasury increased $238,886. The interest-bearing debt amounted at the close of the year to $847,363,890; debt on which interest has ceased since maturity, $1,636,890.26; debt bearing no interest, $373,728,570.14, making a total of $1,222,729,350.40. The certificates and Treasury notes offset by an equal amount of cash in the Treasury outstanding at the end of the year were $547,110,973, a decrease of $8,536,000 for the month. The total cash in the Treasury was $853,905,635.51; net cash balance, $167,432,096.70. During the month there was a decrease in gold coin and bars of $7,286,779, the total at the close being $144,020,363.91. The silver holdings of the government, on the other hand, showed an increase of $1,198,876.20.

THE SOUND-MONEY PROPAGANDA.

One of the most effective agencies in the propaganda for sound money is the committee on sound currency of the New York Reform Club, an account of whose recent work in that direction, given in a recent report of the executive committee, will be found of interest. The committee says that last year's work was completed with the belief that much good had been accomplished in turning the tide of popular sentiment against the threatened debasement of the standard of value, and, in accordance with the plans outlined by the full committee in its last annual report, an aggressive movement was inaugurated in favor of general currency reform, including the retirement of the greenbacks, the withdrawal of the government from the banking business, and the renunciation by the United States of all fiat money heresies.

With the approach of the primaries to be held for the selection of delegates to the national conventions, however, it became apparent that the issue of the free coinage of silver at a ratio of 16 to 1 was again being forced to the front, and that renewed educational work must be undertaken in opposition, and for several months past the committee has therefore been confining its work almost exclusively to the question of the standard of value.

The committee, it appears, is now supplying over 1,500 papers throughout the United States, most of which are located in the west and south, with sound-money matter, in the form of plates, ready-prints and supplements. The expenditure incident to this work alone aggregates about $1,000 per week, or about 1 cent for each 120 columns of printed matter distributed to the readers of twenty papers. The average bi-weekly circulation already secured amounts to more than 2,000,000 six-column pages.

The committee believes that the results obtained are reached at an economy of expenditure not approached by any other method of work. It has gradually developed this press organization and has secured the confidence of sound-money editors in both parties alike, and now that a very widespread interest exists, the demand for cartoons, news and facts bearing on this question has rapidly grown to enormous proportions. The committee says, however, that it can take full advantage of the opportunities which present themselves only provided it can command sufficient funds to warrant it in vigorously promoting the work already begun.

The extent of the committee's work in distributing documents since the beginning of its active year, December 1, 1895, may best be understood by reference to a statistical exhibit given in its report. Classing as documents not only the pamphlets published in the sound-currency series and speeches in pamphlet form, but newspaper supplement plates and other similar publications, the committee has distributed 13,735,000 documents since the beginning of its work for the year. The work has been so much increased during the last six weeks that the current monthly circulation amounts to about 5,000,000. The committee, however, complains that the amount of cash on hand, together with the small amount subscribed and not yet paid, will not be sufficient to carry on the work at the present rate of efficiency much longer, that all its available resources have been exhausted, that the continuation of the work depends solely upon current receipts from those who are in active sympathy with the movement, and that unless the advocates of sound currency promptly and generously come to its aid with further liberal subscriptions, it will be obliged to terminate most of its work abruptly. This contingency it believes would be most unfortunate at the present time, when public sentiment is so thoroughly aroused and a large and appreciative newspaper audience all over the country is eagerly and anxiously seeking information on this subject. The effect of such newspaper work, it thinks, far exceeds any other sound-money influence which can be exerted at the present time, and whatever may be the positions, good, bad or equivocal, finally taken by the conventions, the people themselves will be better prepared to act with intelligence and promptness in thwarting dangerous congressional schemes which are very sure to appear later on. This is an appeal which ought to call forth a prompt response.

EDITORIAL NOTES.

The recent purchase by a European syndicate, in which the Rothschilds are interested, of another large block of shares of the Anaconda Copper Mine of Montana has served to attract more or less general attention in business and speculative circles to the condition of the copper-producing industry and the condition of the market for the metal. Perhaps this interest is not as keen as it might be if the public was not so absorbed in the political outlook and its effect on the money and stock markets. Nevertheless, some activity has been displayed in copper-mining shares, and it is also understood that some producing properties and favorably regarded "prospects" in the way of copper mines in the west have within the last few weeks passed under the control of eastern parties. The action of the Rothschilds in connection with the Anaconda was indeed eminently calculated to create such a movement. The property itself is regarded as the greatest copper producer in the world, and by the recent deal the Rothschilds and their associates increase their holdings to almost a controlling interest in it.

CURRENT BUSINESS NEWS.

Industrial.

The *Engineering and Mining Journal* says: "The revival of mining activity in Utah is among the many indications of a betterment of conditions in the mineral states of the west. The depression that has acted like a frost on many of the budding promises of years ago is going into history. The world-wide interest taken in mining the precious metals and the idle capital on the keen scent for such investments make it a foregone conclusion that an era of enterprise and prosperity has struck its morning hour in our western states. The mineral resources of Utah are being deployed more or less, and as one in the chain of gold and silver that is linking it and its sister states in a commonwealth of coming prosperity, it has a bright future."

Representatives of the Nashua Manufacturing Company, New Hampshire, have been at Birmingham, Ala., for three days, and have "closed negotiations for the erection of cotton mills which will be the largest ever built in the south by New England capital, and the biggest plant of the kind in Alabama. It will be located at Cardova, forty miles west of Birmingham, and will cost $600,000. The location was chosen because of the proximity to both the coal and cotton supplies. Work will begin soon."

At a meeting of southern textile manufacturers in Atlanta, Ga., this week, "it was decided to call on all mills to curtail production 50 per cent. during the next ninety days."

All but six of the Kentucky distillers have signed an agreement to suspend operations for eighteen months from July 1. "The warehouses are filled with whisky, which is now almost a drug on the market, owing to overproduction."

Wire and cut nail manufacturers at Chicago, June 25, decided to reduce output during the summer months, but no action was taken on the question of change of rates.

The situation and outlook in the southern iron and steel industry is still unsatisfactory. The Chattanooga *Tradesman* says: "There is a slight increase in the demand for finished products, but quotations are lower, prices having been cut to secure business."

At Lowell, Mass., the sentiment among Lowell mill managers on the proposition of the Arkwright Club to shut down the cotton mills half the time in July and August seems to be decided, "although they do not care to say much about it. With one possible exception, the Lowell mills are doing well. It is not generally believed here that unanimous consent among the New England mills can be obtained for a shutdown, and unless the action is to be unanimous the Lowell mills are not likely, it is believed, to go into the deal."

The Boston *News Bureau* says in regard to the curtailment of cotton-mill production: "It does not seem to be easy to bring into line some of the mills represented in Boston so that they will take part in the short-time movement."

Annual suspension time is at hand in the iron, steel and glass industries, and for the next few weeks many thousands of men will be idle. The 1896–97 wage scale of the Amalgamated Association of Iron and Steel Workers went into effect July 1.

The new contract between coal miners and operators in the Birmingham, Ala., district went into effect July 1, for two years. The miners are to receive forty cents a ton when No. 1 foundry iron sells at $8.50, with a 2½ cents advance for every fifty cents advance in iron. This is an increase of 2½ cents for the miners.

A New Bedford, Mass., dispatch says that there will be no general shutdown of the mills there during this month and August.

Commercial.

The *Northeastern Lumberman* says: "The large daily newspapers, between increased circulation and large editions, particularly on Sunday, are rapidly increasing their use of wood pulp. Such is the demand for newspaper at present made mainly from ground wood pulp that the pulp and paper mills which supply this demand especially are adding to their works very materially. We learn of at least twenty new machines to be added this year in New England, each of which will have an average output of some fifteen tons daily."

Grain steamers with heavy cargoes have been sent from Brooklyn to South Africa, and as the grain is loaded in 200-pound double sacks, instead of in bulk, it is assumed that it is to be unloaded at some small ports which are not equipped with grain-handling plant.

The president of the Pennsylvania Railroad, Mr. Roberts, says: "I am convinced that the free silver agitation is alone responsible for the conditions as they unfortunately exist at this time. Commercially the country is in good condition, and nothing but the uncertainty of what is to be the result of the effort to bring about the free coinage of silver prevents a season of great prosperity. I see no prospects for a change in the present conditions except by dispelling all doubts as to the future policy of the country on the money question."

The London *Financial News* finds it "pleasant to be able to record the continued prosperity of the United States Brewing Company. For the year ended March 31 the sales increased by 21,357 barrels, and the profits, after charging repairs and renewals, £18,347, for depreciation and the cost of the New York office, came to £110,725. The usual dividend of 10 per cent. on the ordinary shares is declared and £20,000 is added to reserve, bringing it up to £100,000. We wish there were more Anglo-American brewery undertakings that could show similar results."

A Prescott, Ariz., dispatch, June 30, says: "Cattle are dying from starvation in all directions on the ranges of Arizona, the lack of feed being due to the failure of rain."

The American liner St. Paul, which sailed Wednesday for Southampton, carried among her passengers a delegation of leading manufacturers and business men of the United States, whose ultimate destination is South America, and whose object is the stimulation of reciprocal trade relations between the two countries.

The President has made the following appointments: C. Max Manning, of Georgia, secretary of legation of the United States at Monrovia, Liberia; George E. Kedzie, of Mexico, consul of the United States at Durango, Mex.; George B. Anderson, of District of Columbia, consul at Antigua, W. I.; Paul Wieske, of Texas, consul to Managua, Nicaragua.

According to the July returns from regular county correspondents of *American Agriculturist*, the acreage and conditions of leading crops July 1 were as follows: Acreage of corn compared with last year, 100.3; general average condition of corn, 92.0; condition of winter wheat, 79 7; spring wheat, 92.0; oats, 93.6. Old wheat in farmers' hands, 8.4 per cent. of last year's crop, or about 42,000,000 bushels; oats in first hands, 18.3 per cent., or about 166,000,000 bushels. The area planted in corn is estimated at 81,702,000 acres, or about 250,000 more than last year. The principal increase was in the Ohio valley, Iowa, Kansas and Nebraska. The south has planted less than last year, the heavy increase in the cotton acreage being largely upon ground which last year was in corn. The increase is in those states where corn is a staple crop.

Reports from Texas say one-half the corn crop has been destroyed by drouth. The movement is small, and comes from the largest crop grown.

The Neill London cotton circular says: "With present outlook Louisiana, Mississippi and Alabama will give sufficient new cotton in August to supply the market, but all experience suggest the old truth that making a large cotton crop is not all plain sailing."

The *Orange Judd Farmer* gives condition winter wheat 79.7, a decrease of 3.4 points; spring wheat condition 92, a decrease of 3.5 points. State reports are coming in, showing a large deterioration in condition and thrashing in June. In our daily letter, June 29, we said: "We think it about time to begin buying wheat for a profit."

The New York Produce, Cotton and Coffee exchanges were closed on Thursday and Friday this week.

Financial.

A state convention of silver men is announced to be held in New York city on July 10. "They don't propose to let New York be carried by the 'gold bugs' by default."

If gold exports were a mere question of the balance of trade they would have been checked before this, "but," says the Philadelphia *Press*, "they are due to other causes, one the currency and the other sales of our securities abroad. English distrust has been aroused by the free silver strength and is displayed in this way."

The Chicago *Tribune* says: "There is one savings bank here which keeps an accurate record of the calling of its depositors. During the last year there was only one actor on the list, while there were 1,392 tailors; there was but one editor, while there were 725 laborers; there was but one boarding-house keeper and 337 peddlers. There were lots of shoemakers, bakers, barbers, waiters, cigarmakers, but very few musicians, liquor dealers, lawyers or policemen."

The New York banking house of Maitland, Phelps & Co. announces a change in its name, and will hereafter continue under the firm name of Maitland, Coppell & Co. This house enjoys the distinction of being one of the oldest in New York city. It was established in 1796 by James Lenox and William Maitland, under the firm name of James Lenox & William Maitland.

The fire losses in the United States during 1895, which have just been published in detail by the *Chronicle*, reached the enormous total of $142,110,233. This was more than $2,000,000 in excess of the losses of the previous year, and, with the exception of the years 1891, 1892 and 1893, the destruction wrought by fire last year was greater than that of any year since 1875. During the twenty-one years since 1874 the greatest fire loss is chargeable to 1893, when upwards of $167,500,000 worth of property was destroyed. Of the total loss inflicted upon the country by this element last year about 64 per cent. was covered by insurance. The insurance loss was $84,698,030.

The Treasury Department has authorized the Treasurer at New York to reduce the premium on gold bars from ⅛ to 1/10 of 1 per cent.

The American Tobacco Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable August 1.

The Postal Telegraph Cable Company has declared a quarterly dividend of 1 per cent., payable July 15.

The Rhode Island Perkins Horseshoe Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock and 1 per cent. on its common stock, payable July 15.

The Central Trust Company, of New York, has begun suit in the United States Circuit Court at San Francisco against the California & Nevada Railroad Company for $367,050, alleged to be due for interest on bonds issued by the company in 1884.

In St. Louis on Saturday the St. Louis & San Francisco Railroad was sold under foreclosure issued by the federal court to the only bidder, E. C. Henderson, of New York, counsel for the reorganization committee. The price was $1,250,000.

The all-rail east-bound shipments of dead freight from Chicago last week were 56,782 tons, against 61,002 tons the previous week, and 58,971 tons the corresponding week of the previous year.

Miscellaneous.

A statistician who has been interesting himself in the population of the earth says that 32,214,000 die annually; that is, an average of 98,840 a day, 4,020 an hour, and 67 a minute. The annual number of births on the other hand is estimated at 36,792,000, an average of 100,800 a day, 4,200 an hour, and 70 a minute, "so that the population is increasing at the rate of 3 to the minute."

During the fiscal year ending June 30, the receipts of the Post Office from all sources were $2,884,100.94.

Foreign.

French capitalists are said to be meditating a bank in Brazil. "The Comptoir National d'Escompte and the Société Générale are considering the formation of a French bank of Brazil, with a capital of from 12,000,000 francs to 15,000,000 francs. The institution would confine itself strictly to banking business, as distinguished from the class of financial operations which, according to French notions, are quite legitimate functions of a bank."

A Panama dispatch says: "The Clerical party in Ecuador has again inaugurated a determined movement to overthrow Alfaro, the provisional president of the republic. A dispatch from Guayaquil states that General Alfaro has left the capital to place himself at the head of an army of 3,000 men at Riohamba."

A Buenos Ayres paper says: "Owing to Australia's bad harvest the exports from Argentina to South Africa have increased, and up to the end of April amounted to 33,500 sacks of wheat, 13,422 sacks of flour and 43,979 sacks of maize, and it is expected that even should Australia be again able to export wheat thereto, the shipments from Argentina will still further augment. Last year's harvest of Cape Colony was only partially good. The western provinces yielded rather above the average, but was deficient in the other districts. The deficit is reckoned at 400,000 sacks of 200 pounds, which had to be covered by imports from America and other countries. The total consumption of the colony, inclusive of seed requirements, is estimated at 1,200,000 sacks."

The London *Financial News* says: "Still another combination of retail grocery businesses in London has been effected, and now appeals for capital subscriptions under the name of the Direct Home Supply Stores. The prospectus specifies twenty-three establishments of which the directors have received firm offers, and the paying character of these businesses is certified by chartered accountants, who found that, from an average annual turnover in the last three years of £171,670, net annual profits of £17,112 were derived."

The London *Times* publishes a dispatch from Copenhagen saying that the suggestion in the Republican platform adopted by the St. Louis convention, that the United States should purchase the Danish colonies in the West Indies, "creates some sensation. It is believed that the Americans covet St. Thomas for a naval station. The consensus of opinion in Danish circles is that the government is prepared to sell at a suitable price."

The Spanish Chamber of Deputies has adopted a bill enabling the government to raise $100,000,000 on the security of the tobacco monopoly, the money to be available for war expenses.

The British Under Secretary of State for Foreign Affairs, replying to Sir Charles Dilke in the House, says he has not heard that the United States had given up its treaty with Madagascar, and he has reason to believe that a communication on the subject was passing between the United States and France. Great Britain, he added, has not taken concerted action with the United States, as their positions are not identical.

The Canadian government has decided to ask the imperial government to concur in awarding the contract for the fast Atlantic steamship service to the Allan line.

RECENT LEGAL DECISIONS.

[Prepared expressly for BRADSTREET'S.]

Railroads—Appliances—Negligence.

The Supreme Court of Louisiana held, in the recent case of Gumbel et al. vs. Illinois Central Railroad Company, that railroads using appliances in common use which have been used for a long time, and found sufficient to protect their own and other property from danger, should be protected against the charge of negligence, because of such use, and that if such appliances are used the burden of proof is on plaintiff to show they were defective or improperly and negligently used.

Bank—Check—Refusal to Pay.

The Kentucky Court of Appeals held, in the recent case of The Mount Sterling National Bank vs. Greene, that if a bank refuses without sufficient justification to pay the check of a customer, the customer has an action for damages against the bank; that where the customer, either before the check is drawn or before the bank has notice of it, becomes indebted to the bank in an amount equal to or greater than the amount of his deposit, the bank may refuse to honor his check, and that in order to give the bank this right it is not necessary that it should apply the deposit as a credit on the customer's indebtedness, the simple refusal to pay the check being all the appropriation needed for that purpose.

Married Woman—Loan—Note.

The Supreme Court of Georgia held, in the recent case of Lewis et al. vs. Howell, that where a married woman borrowed money from a creditor of her husband, the loan being made on condition that she would "take up" a promissory note due to the creditor by the husband, who was at the time insolvent, and where she accordingly gave to the lender her promissory note for an amount including the cash advanced to her and the amount of her husband's note, which was delivered to her, but no part of which was ever paid, and where she paid upon her own note a sum exceeding the principal and lawful interest of the loan to herself, it was her right to sue for and recover the excess of her own debt from the legal representatives of the estate of the deceased lender.

Insolvency—Fraud—Louisiana Law.

The Supreme Court of Louisiana held, in the recent case of Mark vs. His Creditors, that a charge of fraud preferred against an insolvent under section 1804 of the Revised Statutes of Louisiana is prescribed by the lapse of twelve months antecedent to the filing of his schedules under order of court; that the insolvent laws of the state provide a purely domestic remedy which can be availed of only by resident creditors, and those domiciled outside of the state, provided they come into the courts and submit themselves to their jurisdiction by accepting the surrender and by proving their debts at a general meeting of the creditors; and that it is of the essence of a charge of fraud under the aforesaid section of the statutes that the opposition should allege and the evidence prove an intention on the part of the insolvent to defraud and injury resulting therefrom to the complaining creditor.

Patent—Injunction—Tanning Process.

Judge Colt, of the United States Circuit Court at Boston, has granted a preliminary injunction in the case of The Tannage Patent Company vs. Donallan. The case is regarded as an important one and involves a large amount of money, the plaintiff claiming the exclusive right to the so-called chrome tanning process which is used in all morocco leather manufactories. The decision of the court is taken as meaning that every morocco leather manufacturer in the country must pay royalties to the plaintiff. An appeal will, it is said, be taken to the Circuit Court of Appeals. The judge said, in referring to the Schultz patents, which were involved: "These patents are not for the first time brought before the court for adjudication. They have been litigated in the third circuit, in a case extending over a period of more than two years, where their validity was vigorously contested, and finally sustained by the appellate court. I am aware that the defendant here is a different party from the parties to that suit. He, therefore, is entitled upon final hearing, when the evidence is all in, to have the questions reviewed which were passed upon by the Circuit Court of Appeals for the Third Circuit; but at this stage of the case, upon motion for a preliminary injunction, the rule is that where the validity of a patent has been established in a prior litigation, and especially by an appellate court, the patentee is entitled to a preliminary injunction in another suit brought against another defendant in a different district, unless the defendant can show that he does not infringe, or brings forward new evidence on the question of validity of such a character that the court is reasonably satisfied that if the same evidence had been presented in the other case that court would have reached a different conclusion."

Turnpike Road—Tolls—Collection.

The Kentucky Court of Appeals held, in the recent case of Rudy's Adm'r vs. Shelbyville, etc., Turnpike Road Company, that in an action against a turnpike road company to recover the amount of toll alleged to have been wrongfully collected by defendant at a tollgate on a branch road, which gate plaintiffs insisted the defendant had no right to erect, the agreement with the subscribers under which the defendant built the road being a written one, it was not competent for the plaintiffs to show a contemporaneous parol agreement not to erect a tollgate, such an agreement being inconsistent with the writing; that although the amendment to defendant's charter authorizing it to build the branch road gave it no express authority to collect toll, yet as the act to which the amendment applied gave ample power, and the road when built became a branch of the main road, and its control and management subject to the existing laws of the corporation, nothing more was necessary to authorize the collection of tolls on the branch road, and that a provision of an amendment to the charter giving authority to charge and collect tolls for certain kinds of travel, and to erect special gates therefor, did not have the effect to take away the right to collect tolls for all kinds of travel which had previously been given.

Credit Insurance Policies Construed.

The Supreme Court of Minnesota lately decided a number of cases involving the construction of credit insurance policies. The suits were brought by various firms and corporations against the National Credit Insurance Company, which was engaged in the business of insuring, or indemnifying, mercantile concerns against "excess losses" caused by the failure or insolvency of customers to whom such concerns had made sales on credit, which "excess losses" were ascertained by deducting from the actual losses 15 per cent. thereof, and also 1 per cent. of the total year's sales, to be not less than a stipulated amount. In one of the cases, Allen et al. vs. National Credit Insurance Company, it appeared that a firm took out such a policy, to run for one year, in which it was stipulated that the year's sales on which the 1 per cent. was to be computed should be not less than $90,000, and when the policy had run ten months and seven days, the insurer, being insolvent, made an assignment for the benefit of its creditors. The court held that such assignment terminated the policy. It further appeared that during the ten months and seven days which the policy ran, the total amount of sales of the insured was $75,000 and no more. The court held that, for the purpose of determining the "excess loss," the 1 per cent. should be computed on this amount and not on the $90,000 aforesaid, and that they were also entitled to recover back the unearned premium for the balance of the year after the assignment. In another case, Brown vs. The Same, it appeared that the plaintiff took out a similar policy which had run but a part of the year for which it was taken out, when the insurer assigned as aforesaid, and during this time the plaintiff did not suffer a sufficient amount of loss to enable him to recover for the same under the policy, but during the whole year for which the policy was issued he did. The court held that he was not entitled, as against the funds in the hands of the insurance commissioner deposited under section 3332 of the General Statutes 1894, to treat the insurer as a going concern for the balance of the year, so as to recover for losses occurring subsequently to the assignment. In still another case a corporation took out a similar policy, which ran also but a part of the year when the insurer assigned as aforesaid; during this time the insurer suffered no loss. The court held that it was not entitled to rescind the contract and recover back the whole premium paid, and was only entitled to recover back the unearned premium for the balance of the year subsequent to the assignment. The court held, in another case where the policy of a company ran the full year for which it was issued, and nine days thereafter the insured assigned as aforesaid, and by the terms of the policy the insured was barred from recovering on the policy unless it made final proof of its year's losses within thirty days after the expiration of the year, which it failed to do, that the assignment was a breach of the contract, and the insured was entitled to recover on a quantum meruit without furnishing such proof of loss, and that policy-holders having claims for unearned premiums were entitled to participate in the funds in the hands of the insurance commissioner.

BUSINESS NOTES.

Currency Inflation.

In an address before an association of bankers a few years ago Mr. Edward Atkinson said: "Bearing in mind that the volume of credit granted to farmers, merchants, manufacturers, tradesmen, workmen and others, in order to enable the production and exchange of products to be conducted at present prices, at this moment exceeds the whole amount of circulating medium by fiftyfold, it becomes manifest that any inflation of the currency or addition to the money in circulation which impairs its credit and renders ultimate redemption in gold doubtful must result in such a contraction of credits as will obstruct commerce, depress prices, and work in the very reverse of what the advocates of inflation expect."

Our Coast Defense Projects.

A Washington dispatch says: "The work of constructing the coast defenses authorized by Congress will begin with the fiscal year July 1. Preliminary arrangements for carrying out the projects contemplated have been made by General Craighill, the chief of engineers, and one-half of the $5,000,000 available under the law will be expended immediately under plans already approved. The remaining amount will be expended by contract. All important points along the Atlantic coast and the Gulf of Mexico from Portland, Me., to Galveston, Tex., and on the Pacific coast from Puget sound, and the mouth of the Columbia river and San Diego, Cal., will be fortified under the present arrangement. As soon as these projects are under way, bids for the work to be done by contract will be called for."

Additional Railway Mileage Reports.

The *Railway Age* says that "between January 1 and June 30 track was laid on 63 lines to the extent of 788 miles, as is indicated in the following summary by states:

States.	No. lines.	Miles.	States.	No. lines.	Miles.
Alabama	3	41.50	Mississippi	1	30.
Arkansas	1	2.	New Jersey	1	12.
California	3	96.	New York	1	1.
Colorado	1	9.	North Carolina	2	5.
Florida	4	61.	Ohio	2	54.
Georgia	8	45.25	Oklahoma Territory	1	5.
Illinois	2	20.50	Pennsylvania	5	44.10
Indiana	2	8.	Tennessee	2	5.50
Indian Territory	1	41.	Texas	4	33.50
Kentucky	1	5.	Utah	1	25.20
Louisiana	3	104.10	Vermont	1	3.
Maine	2	6.	Virginia	1	6.
Maryland	1	20.	West Virginia	1	2.
Michigan	5	54.05	Wisconsin	1	28.27
Minnesota	2	20.23			
Total in 29 states and territories				63	788.20

Compared with the two previous years this statement indicates some increase."

To Hasten Foreign Mails.

A Washington dispatch says: "The scheme for securing the immediate dispatch of foreign mails arriving in New York harbor has been finally agreed upon and will be put into immediate operation. Four of the big steamship lines have consented to coöperate with the government. They are the North German Lloyd, White Star, Hamburg-American and American lines. These have agreed to have lighters ready to take the mails off their steamers at quarantine station immediately on arrival and deliver them to four docks in New York city and Jersey City. The plan will save six hours on New York mails and twenty-four hours for outside points. All mails will be taken by the first possible outgoing train in the required direction, and the passage from quarantine to New York city and then to the depot and across the ferries will be given up."

Transvaal Customs Returns.

The London *Daily Financial News* says: "The Transvaal custom house authorities have just issued an interesting statement of the value of the imports, the custom duties paid thereon, and their cost of collection. The figures of the last five years speak for themselves:

	Value of the imports.	Customs receipts.	Cost of collection.	Net revenue.
1891	£2,602,955	£316,660	£18,795	£297,865
1892	3,498,792	341,436	19,581	322,855
1893	5,374,701	692,831	17,520	675,311
1894	6,440,215	812,173	20,314	791,859
1895	9,816,304	1,085,419	28,266	1,057,153

The budget estimates for 1895 included only £900,000 for customs, and the results are, therefore, highly satisfactory. The whole Transvaal depends for its prosperity upon the gold-mining industry, and the Pretorian government, in particular, enriches itself in the shape of import duties and heavy taxes at the expense of mining enterprise."

Canadian Pulp and Paper Makers.

The *Northeastern Lumberman* says: "Canadian pulp and paper manufacturers are increasing their product. They claim to have cheaper raw material, cheaper labor and lower rates of freight than the American manufacturers. One of their largest mills was built to ship its stock to England. So long as the latter market was open everything went smoothly, but the Scandinavian manufacturers soon entered the contest, and proved to have a good claim on the market by virtue of prices and nearness to the customer. Some of the Canadian manufacturers are now forced to seek an American outlet. The present American tariff is more favorable to the Canadian than the late tariff. This is likely to be changed to his disadvantage in 1897. Probably this will lead to an export duty being placed upon the shipments of spruce pulp wood from Canada into the United States, in which case our American mills will have to depend upon local supply, which is undoubtedly ample for many years."

British Armaments and Trade.

A manifesto on recent political events bearing on imperial policy, trade and armaments has been issued by the British Increased Armaments Protest Committee. "It concludes by stating (1) that the total of British trade has not by any means advanced in proportion with the area and population of the empire—that, in brief, trade does not follow the flag, and that the disproportionate growth of armaments forms an increasingly severe strain upon industry; (2) that by far the greatest proportion of our trade always has been and still is not with our colonies, but with foreign countries, and especially certain of them which are affected by our political policy; (3) that the proportion and in some cases the amount of colonial trade is not increasing, and that recent acquisitions which have involved a heavy political and financial burden have only infinitesimally increased that trade; (4) that British labor is losing and not gaining, and will probably lose still more heavily by the extension of the empire; (5) and, finally, that a large and increasing portion of our wealth accrues from loans to and investments in foreign countries, a fact which helps to show the folly of perpetually increasing armaments, and gives a new reason for a non-provocative and conciliatory foreign policy."

The Bounty on Canadian Pig Iron.

The *Iron and Steel Trades Journal* (London) says: "In our last issue we referred to the bounty which the Canadian government has decided to grant to encourage the manufacture of puddled bars. We now learn that an Order-in-Council has been passed by the Dominion government making an important change in the regulations regarding the bounty on pig iron. An act passed by the Dominion Parliament in 1894 authorizes the Governor-in-Council to pay a bounty of $2 per ton on all pig iron made in Canada from Canadian ore, any foreign ores that may be used as admixtures not to be included in the computation when claims for the bounty are being made. The Order-in-Council just issued so amends the regulations as to allow the bounty of $2 per ton to be paid on pig iron which has been made partly from Canadian and partly from foreign ore. Canada has an abundance of ore within her confines, but it is considered that, by importing foreign ore to mix with the domestic, the furnace people can manufacture a better brand of pig iron. The Hamilton furnace has found it necessary to go to Lake Superior for its ore, and the Ferrona Company is importing ore from Newfoundland, which, according to samples being shown, is enabling them to turn out what promises to be an excellent soft iron."

Commercial Value of Acetylene.

The London *Engineer* in a recent number says: "One kilo. of calcium carbide and 500 grams of water will produce 300 liters of acetylene gas, and this, it is stated, will provide a light equal to fifteen ordinary gas jets for six hours. The burner used has a smaller orifice than an ordinary burner. In France acetylene is now produced on something like a commercial scale, and its cost can, therefore, be compared with ordinary gas. The price of coal gas per carcel hour is 1 centime, while acetylene costs 3.2 centimes, but acetylene being much more powerful, the cost works out in practice to about the same as that of coal gas. Acetylene gives off very little heat in burning, and thus cannot well be employed for heating purposes and for driving motors. Acetylene producers are now being supplied by a company in Paris at the price of £6. They have a capacity of one kilo. of calcium carbide, and will provide a light equal to ten ordinary gas burners for six hours. A large number of works are now being built on the continent for producing calcium carbide, and when in full operation the present price of 70 centimes to 1 franc per kilo. of carbide is expected to fall to 50 centimes. It is possible now to obtain large supplies of carbide at a lower price than that quoted, but it is of very inferior quality, producing only 150 liters of acetylene per kilo., instead of 300 liters."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade in both commercial and industrial lines is duller, but the falling off is, in part, the usual midsummer dullness. Comparatively few changes are noted, but most of them are decreases in either price or demand. Quotations for wheat, Indian corn, cotton, oats, iron and steel are lower. Sugar has reacted after the decline last week; leather remains conspicuously firm, with shoe factories busily employed, and petroleum and anthracite coal are higher. The sentiment of the trade at many points is that the immediate outlook for business is not favorable. At some western centers complaint is made that the purchasing power of the agricultural community is curtailed by prolonged low prices for farm products. St. Louis jobbers report some Texas merchants countermanding orders, owing to the effects of the drouth. There is a fair demand for grain, groceries and staple dry goods at Minneapolis and Duluth, and in fabrics and groceries at St. Paul and Omaha, while Louisville reports a better demand for hardware, with collections improved. Similar advices come from Baltimore, Savannah and Charleston. These constitute the most favorable reports concerning the state of trade. At Chicago the volume of business for six months is smaller than last year. At New York, Philadelphia, Buffalo and Pittsburgh there are no characteristics, except those of extreme dullness. On the Pacific coast, Seattle reports its June business in excess of that a year ago, and Tacoma that lumber shipments to Africa and to France continue active.

The general industrial situation shows no renewal of activity. The apparent improvement in wool has disappeared. Manufacturers refuse to buy raw material simply because it is cheap. Excessive dullness marks dry goods, although this is the usual period for stock-taking. Cotton mill treasurers controlling 4,000,000 spindles have agreed to curtail production. A large amount of woolen machinery remains idle, and the iron and steel industries are as flat as heretofore.

Business failures in the United States for six months, as reported to BRADSTREET'S, number 7,602, the largest six months' total since records have been compiled. The increase compared with 1895 and 1894 is more than 1,000 in each instance, 15 and 16 per cent. respectively. Compared with 1893 (including two months of the panic), the increase this year is about 1,340, or 22 per cent., and contrasted with six months of 1892, a period of prosperous trade, there were 42 per cent. more business failures in the past six months. Total liabilities of 7,602 failing individuals, firms and corporations are $105,535,000. This has been exceeded only twice before in like periods, in the panic years 1884 and 1893. The increase of total liabilities over the first half of 1895 is 31 per cent., and over 1894 it is 28 per cent., but it is 88 per cent. more than in the first half of 1892. The falling off of liabilities contrasted with 1893 is 38 per cent. It appears probable that underlying conditions prevalent in 1893 and 1894 have not all been eliminated, as the ratio of total assets to liabilities has been exceptionally heavy this year, more than 57 per cent., which is a characteristic of periods of abnormal business embarrassments.

June bank clearings foot up better than expected, with a total at 65 cities of $4,285,617,108, larger than in any month since January, and only 2.4 per cent. smaller than June a year ago. They exceed those of May this year by 1.5 per cent. This is the first time since 1887 when June clearings have exceeded those of May. Compared with June, 1894, the gain is more than 19 per cent., and with June, 1893, the decrease is only 5.4 per cent. The decrease in May from a year ago was 13 per cent. For six months total clearings aggregate $25,563,366,722, a gain over 1895 of 1.1 per cent., and over 1894 of 15 per cent., but a decrease from 1893 of 17 per cent. The increase in bank clearings this week is based in part on increased speculative activity at New York, but to a greater extent on monthly and semi-annual settlements in financial and commercial circles throughout the country. The total is $1,103,000,000, or 22 per cent. more than last week, nearly 13 per cent. more than in the like week last year, and 30 per cent. larger than in the first week of July, 1894. Compared with the similar period in 1893 this week's gain is 4.7 per cent., but compared with the corresponding week in 1892 the falling off is 3.4 per cent.

Cable and telegraph reports to BRADSTREET'S furnish totals of wheat stocks available in the United States, Canada, afloat for and in Europe and in Australia on July 1 which aggregate 115,481,000 bushels, the smallest similar total on a like date for four years, and the smallest total reported at quarterly intervals since July 1, 1894. Exports of wheat from both coasts of the United States and from Montreal, flour included as wheat (one day's shipments missing from four Atlantic ports), aggregate 2,601,000 bushels, against 2,837,000 bushels last week, 2,007,000 bushels in the first week of July, 1895, 1,850,000 bushels in the corresponding week of 1894, and as compared with 3,677,000 bushels in the like week of 1893.

Stock prices at New York are now steady and the market dull at a slight recovery from a severe depression earlier in the week. The downward tendency and extensive liquidation resulted from a scare over the strength of free-silver sentiment among the Chicago delegates, supplemented by attacks by bear operators. London bought stocks heavily on the decline, and a portion of its purchases will be shipped abroad. The foreign exchange market is dull and heavy, around 4.88 for demand sterling. Despite rumors of large gold exports, only $1,250,000 were shipped, and none has gone on Saturday. Silver is quieter and a shade lower in price.

General trade throughout the Canadian Dominion has been smaller in volume, partly in consequence of the holiday on the 1st instant. Toronto jobbers report no change in demand for or prices of staples. At Montreal some manufacturers have closed temporarily, the outlook not being regarded bright as to the near future. Halifax advices are that crops throughout Nova Scotia are promising, and like reports come from New Brunswick. Forest fires in Newfoundland have destroyed a large amount of property. Bank clearings at Winnipeg, Toronto, Hamilton, Montreal and Halifax aggregate only $13,964,000 this week, against $17,330,000 last week and $19,244,000 in the week a year ago. The total number of business failures in the Dominion of Canada for six months is 1,184 for 1896, compared with 934 in 1895, an increase of nearly 27 per cent. Business failures were more numerous in the past six months than in the like portion of 1895 in each of the provinces except Manitoba and British Columbia. Total liabilities this year are $8,234,000, against $6,629,000 last year, a gain of 24 per cent. Aggregate liabilities were smaller this year than last in Ontario, New Brunswick, Prince Edward Island and Northwest Territory. Only 8 failures for six months are reported from Newfoundland, compared with 38 in 1895. Total liabilities there were $414,000 in the first half of 1895, and are only $25,766 this year.

FINANCIAL.

The Money Market.

Beyond the feeling of conservatism which prevails in financial circles, and which has been somewhat increased by the break in stock market prices, the New York loan market shows little or no change. The shrinkage of values was not attended by any marked disturbance of loans, and the July disbursements went through with a minimum of effect on the market. A number of banks on Tuesday marked their standing call loans up to 3 per cent., and quotations for bankers' balances were recorded on the Stock Exchange at as high as 4 per cent. By Thursday, however, the transactions on the latter institution were back at 2@2½ per cent., or slightly better than last week's figures. There is little to record in connection with the time loan market. Business is restricted, and rates are quoted 3@3½ per cent. for 30 to 60 days and 3½@4 per cent. for longer periods. Mercantile paper is inactive, with rather limited offerings of acceptable names and a somewhat smaller buying demand. Quotations for best names and indorsed bills receivable are 4½@5 per cent.

Foreign Exchange.

Exchange rates have been heavy this week and the market on the whole dull. There has been a rather light inquiry, but the supply of bills was scant. Notwithstanding the apparently large buying of stocks for London account on the market here, there was no pressure of security bills, and the small amount of gold shipments was reflected in the limited amount of such drawings coming on the market. The actual exports for the week were $700,000 on Tuesday and $200,000 by Thursday's German steamer, besides $350,000 also forwarded on Tuesday, which, however, was not drawn from the Treasury, but was procured on Assay Office checks. Rumors were current in the stock market that heavy withdrawals of gold would take place before the end of the week, and exaggerated accounts of the reason for the actual shipments were circulated, though there seems to be little basis for any belief that foreign interests are directing the transfer of balances in the form of specie. It was also intimated that German bankers have raised the premium or allowance for gold consignments. The decline in rates has, however, apparently made any such action useless. Posted rates remained at 4.88@4.89, and the current quotation for actual business in demand sterling has been close to 4.88, bids at the end of the week being about $1 per £1,000 less than that figure. Long sterling was also heavy at between 4.86¾@4.87⅛. On Friday the exchange market was dull, and $250,000 gold was taken from the Treasury without any information being given as to its destination.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

June 27.	June 29.	June 30.	July 1.	July 2.	July 3.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¼@4.88⅜; commercial bills, 4.86¼@4.86½; francs, 5.16⅞@5.15; reichsmarks, 95¼@95¾.

The Bank of England discount rate remains unchanged at 2 per cent. The bank this week lost £671,000 in specie, and its reserve fell from 59.37 per cent. to 54.41 per cent. The London open market this week was affected by the July disbursements, though only momentarily, discounts touching ¾@1 per cent. and receding to ⅝ per cent., while call money was quoted as high as 1@1½ per cent., only to recede to ½@¾ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending June 26, 1896:

	1896.	1895.
Dry goods	$1,[illegible]	$1,972,330
General merchandise	[illegible]	6,667,068
Totals for the week	$7,880,716	$8,639,398
Previously reported	236,938,235	251,593,960
Since January 1	$244,818,951	$260,233,348

The exports (exclusive of specie) from New York to foreign ports for the week ending June 30 were $831,609 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$6,748,677	$6,746,315
Previously reported	187,289,160	168,179,807
Since January 1	$194,037,837	$174,926,122

Silver.

While speculative dealings in silver bullion certificates have continued on an extensive scale, the movement has failed to uphold the market, in view of London's lack of response and the relatively lower prices there. The prospect for the adoption of a silver platform at Chicago has also been without particular effect, and prices have shown a declining tendency. Bullion certificates, in which the dealings amounted to 656,000 ounces, declined from 69⅝ to 68¾c., and rallied on Friday to 69c. Commercial prices for bars declined from 69⅛c. per ounce to 68⅝c. here, and in London from 31 9/16d. to 31⅜d.

Surplus reserve	1,831,657	1,272,657	Inc.	559,000

The New York Banks.

According to the known statistics of the subject, about $2,500,000 came last week from the interior to New York institutions. The gold shipments of the week were comparatively small in amount and cut little figure in the averages of the associated banks, which show an increase of $2,410,000. Loans increased $215,000 and deposits were augmented $1,644,000, the result of the other changes being an increase of almost $2,000,000 in the surplus reserve. The figures of the statement compare as follows with those of the preceding week:

	June 20,'96.	*June* 27,'96.	*Changes.*	
Loans	$474,783,600	$474,993,300	Inc.	$215,700
Specie	61,554,600	62,015,300	Inc.	460,700
Legal tenders	82,196,100	84,145,700	Inc.	1,949,600
Deposits	495,330,800	496,974,700	Inc.	1,644,900
Circulation	14,607,600	14,584,900	Dec.	22,700
Total reserve	143,750,700	146,161,000	Inc.	2,410,300
Reserve required	123,832,450	124,243,675	Inc.	411,225
Surplus reserve	19,918,250	21,917,325	Inc.	1,999,075

At the corresponding date last year the surplus reserve was $34,225,925, against $74,803,350 in the corresponding week of 1894.

On Friday evening, July 3, the bank statement, covering five days' operations, was issued, showing the following changes in the items:

Loans	Inc.	$1,200,000
Specie	Dec.	149,000
Legal tenders	Dec.	922,000
Deposits	Inc.	2,072,200
Circulation	Dec.	28,000
Total reserve	Dec.	1,051,000
Reserve required	Inc.	578,050
Surplus reserve	Dec.	1,589,050

At the corresponding period last year the surplus reserve was $32,173,700, against $72,134,725 in 1894.

THE STOCK MARKETS.

The New York Stock Market.

Decidedly bearish tendencies asserted themselves in the New York stock market this week. Its earlier days, indeed, were marked by a more decided shrinkage in values than has been witnessed for some months past, accompanied by both liquidation on a large scale, and by pressure upon prices from operators for the short account. The general expectation that a free-silver platform and candidate will be named at Chicago, and the uncertainty as to the real strength which may lie behind the silver movement, was the cause of this disturbance. The advance in values which culminated a fortnight ago had made the market full of weak, long holdings, which, in the apprehensive condition of the street just referred to, were easily dislodged by an aggressive bear attack. Some of the leading active operators, it would appear, took advantage of this situation and were heavy sellers, their manipulation, which assumed definite form last Saturday, continuing with more or less force up to Thursday, when the growth of the short interests checked the downward movement and induced covering purchases, which gave the market the first local support it received. Apart from sales of stocks where margins had been exhausted or holders became anxious as to the outcome, the public has had little part in this week's trading. Its increased activity with such exceptions was mainly professional, although a very noticeable feature of the situation was the heavy and aggressive buying on declines by the foreign contingent. This, indeed, has been one of the most remarkable incidents of the week. Cable reports describe Americans as being the most active department of the London market, and state, moreover, that at the declines a very considerable demand for them has made its appearance in that quarter. The movement there seems to be based upon the theory that it is impossible for the voters in this country to indorse the programme of the silverites at the polls. At the same time, so far as can be learned, the buying in question can scarcely be ascribed to the foreign public, but is to all appearances due to banking and large financial and speculative interests in London, to which the views just referred to appeal with considerable force. Estimates as to the amount of various stocks purchased by foreign interests vary, and it is not altogether certain that any considerable proportion of them will be sent abroad forthwith. It is, however, within the bounds of probability to say that the aggregate amount of St. Paul, Louisville and other securities having an international market which were taken during the course of the week for foreign account foot up in the neighborhood of 80,000 shares, which, even allowing for a certain amount of reselling when the market rallied, leaves a balance in our favor. While the action of the foreigners did not at once check the demoralization in Wall street, in the end it affected speculative sentiment, and was influential in producing the steadier tone which asserted itself in the latter part of the week at the lower level of prices. The weakness of foreign exchange and the comparatively small gold shipments were also a factor in the case, though the street was from time to time treated to rumors that very considerable gold withdrawals would take place on direct orders from the other side. The downward movement while in progress was a very general one, and affected nearly all portions of the share list, although certain stocks in which there were large weakly-held long interests suffered the most, while the street is not indisposed to accept the theory that leading financial and manipulative interests in the market were not averse to the decline and did not oppose it, even if they gave it no actual assistance. This, however, is hypothetical, and it would seem at most that the insiders in various stocks and the large banking interests whose names were mentioned in this connection simply recognized the futility of opposing a market dominated by disturbed sentiment, and under the influence of another of the scares which in the past year have been so frequent.

On Friday the market was dull, steady, and somewhat higher on covering of shorts and continued foreign buying. At the close the market weakened a little on professional bear selling.

Boston Stock Market.

There has been a fair amount of activity in stocks, but the tendency has been towards lower prices. Atchison has been active and closes ½ point lower, with Chicago, Burlington & Quincy also active, but 4½ points lower at the close. Copper stocks have been in demand, and Boston & Montana closes within ½ point of last week's price, with liberal transactions. Sugar has met with general attention, and the market has sold off 4⅜ points. Bay State Gas was fairly active and closes 2⅛ points lower. Leather dull and lower.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending— *Price July 2, 1896.*	*Price June 25, 1896.*	*Sales July 2, 1896.*	*Sales June 25, 1896.*

MIDSUMMER DULLNESS.

LITTLE PROSPECT OF ACTIVITY IN COMMERCIAL OR INDUSTRIAL CIRCLES IN THE NEAR FUTURE.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, July 3.—The market for most kinds of merchandise shows a midsummer dullness, with general conditions not materially different. The money market is displaying a firmer tone, but business is quiet, although borrowers who are in the market are forced to pay lenders' rates. The best paper is quoted at 4½ per cent. on 4 months and 5 per cent. for longer time. Collateral loans are quoted at 4½@5 per cent., with call loans all the way from 3½@5 per cent. The boot and shoe business is seasonably quiet, but the factories are well supplied with present business and running full. Leather is quiet, but the tone of the market is quite firm, some liberal contracts for the remainder of the year having been closed with English buyers. Hides are quiet but steady. The iron and steel market is dull and prices are held steady. Lumber is quiet and unchanged. Coal quiet but held firm.

Providence, July 3.—The manufacturers of cotton goods find no improvement excepting the natural consequence of a firmer feeling owing to the proposed curtailment which has been decided upon by some of the larger manufacturers. Manufacturers of woolen goods find orders light, and some mills are not running.

Philadelphia, July 3.—Wool continues quiet, and while there is an undercurrent of feeling that prospects are for improvement, the outlook does not indicate any immediate change. Manufacturers are more or less closed or working only on part time. Petroleum moderately active, although prices have declined and collections are dull. Boots and shoes continue active, and dealers anticipate a permanent improvement. Coal is in fair demand for the season, but the 25c. per ton advance has stiffened the market.

Pittsburgh, July 3.—Business conditions here have changed but little, aside from the usual falling off of trade at this time. A fair demand for staples is noted, but orders are generally for present needs. Few sales are reported in the raw iron market, but the business being done is small. The trade express the opinion that there will be no general revival in the business until the close of the campaign.

Baltimore, July 3.—Trade in all lines is quiet, as is usual the week preceding the Fourth of July, the only exception being that in fireworks, which reports an increased demand over 1895. Dry goods and notions salesmen have almost completed arrangements for starting out. Clothing dealers report the demand for immediate wants moderate, with some improvement in the south over the west for future delivery. Collections seasonable.

West and Northwest.

Cincinnati, July 3.—Business is lifeless.

Cleveland, July 3.—The governing conditions of general business have undergone no material change during the week, and the usual midsummer dullness is expected.

Detroit, July 3.—Trade is dull in all lines. Fall orders are light, collections slow, and little improvement is looked for until after harvest.

Chicago, July 3.—Business for the first six months of the year has been a disappointment from what merchants and manufacturers were led to expect from the indications at the opening. It has been harder to sell goods, and although the declines in values have not, on the whole, been severe, they have taken out part of the profits that holders anticipated. In the interior merchants loaded up with more goods than they were able to sell last fall, and in consequence did not buy with their usual freedom this spring. Their stocks now are not large, and they are buying moderately for the fall. The low prices for coarse grains and the prospects that they will not be high in the future in a measure curtail the purchasing ability of the farming classes, and also compel merchants who depend upon the fall trade to go slow for the present. For the past week trade in all lines has been slow, but merchants report the receipt of fair orders for goods for future delivery. They look to the future with more confidence, and expect to sell about as many goods in the next six months as during the same time last year. Wool receipts, 1,797,467 pounds.

Louisville, July 3.—Slight improvement is noted this week in staple groceries and hardware, and country collections are more favorable. Large receipts and sales are still a conspicuous feature in leaf tobacco, and prices are somewhat firmer.

St. Louis, July 3.—The volume of general business is unchanged, and is likely to remain in its present condition for several weeks. Retail trade in the smaller towns is light, partially on account of harvest work. There will unquestionably be a large yield in contiguous territory, but values show a downward tendency. In some sections of Texas merchants are countermanding orders, partially on account of insufficient rains. Leather continues to rule strong despite the fact that purchases are light. Manufacturers of boots and shoes and harness are advancing prices to a slight degree and in keeping with the cost of raw material. Iron and steel are unchanged in value, but the stoppage of many mills makes an advance in iron barely possible.

Kansas City, July 3.—Trade is dull in all lines, with slow collections. Live stock receipts are liberal, with higher values.

Milwaukee, July 3.—The trade situation has not changed materially. The volume of business done is fairly satisfactory. Among trade in general collections are still rather slow.

St. Paul, July 3.—Grocers report increased sales. This is traced largely to the approaching harvest. Trade is also good in hardware and drugs, but in other staples there is little moving at present, though advance orders are somewhat in excess of the corresponding week a year ago. Collections show a falling off in some lines, but this is to be expected.

Minneapolis, July 3.—The approaching midsummer season is indicated by the usual quietness in

trade circles, but prospects for the future are encouraging.

Duluth, July 3.—Jobbers of hardware, groceries, boots and shoes and produce report a fair movement of merchandise, and collections are coming in fairly well, especially from country merchants. Fall orders for boots and shoes are larger and more satisfactory than a year ago. Lumber is moving more freely, but prices continue unsatisfactory. The flour market exhibits more life of late. There is big trading in grain, the receipts exceeding anything in the history of the trade here. Shipments are correspondingly heavy, with low freight rates to the seaboard.

Omaha, July 3.—Trade in groceries and staple dry goods is good. Other lines continue dull. Collections are unusually dull.

Sioux Falls, July 3.—Wholesale houses report better trade for June, 1896, than in June, 1895, with better collections. Retail trade is fair. Prospects for a large crop are good, but the anticipation of low prices retards sales.

Southern Cities.

Charleston, July 3.—Wholesalers in boots, shoes and dry goods report a decided improvement in trade for the week. Collections have been good. Crops are reported in good condition, and there is a better feeling in all lines. Retail trade is about the same.

Savannah, July 3.—Trade for the week is good; collections fair. Turpentine and rosin are coming in the same as last week, with an equal demand for both. Shipments of spirits show a decrease. Both markets are firm.

Atlanta, July 3.—Sales in dry goods and groceries have been somewhat better this week, but prices have continued to fall, and the outlook for the near future is not especially bright. Collections are fairly satisfactory.

Augusta, July 3.—Jobbers report a fair demand for staples, but the profit very unsatisfactory. Collections are slow. Crops in this section are looking well.

Jacksonville, July 3.—Trade is at hard summer basis, and there is little going on, due to extreme hot weather.

Birmingham, July 3.—General trade shows no improvement over last week.

Nashville, July 3.—Trade continues quiet and featureless. Country collections keep up very well.

Memphis, July 3.—General trade is very fair for the season. Collections are fair.

New Orleans, July 3.—Midsummer trade has been slack. Crop conditions are less favorable. The early payment of the sugar bounty would encourage business. The better feeling in rice is based on the poor crop outlook.

Galveston, July 3.—Trade continues quiet in all lines. Sufficient rain has not fallen to materially better the cotton condition, which is now becoming serious, and unless relief is soon afforded crops will be very short.

Pacific Coast.

San Francisco, July 3.—Commercial lines are generally quiet. Freights dull; fruits fairly plentiful and cheaper; produce dull; collections slow; grain steady, with prices tending upwards.

Portland, July 3.—Retail trade in boots, shoes, clothing and dry goods has slightly improved. Produce and groceries continue with the usual demand for staples. Jobbers report retail trade as buying only short orders. Collections are but fair.

Tacoma, July 3.—General trade continues very quiet. Lumber exports show the usual activity. Shipments this week include cargoes to Africa and France.

Seattle, July 3.—The month has closed rather dull, but with an increase over June last year. Groceries and hardware lines continue good, and general lines are about the same as last week.

Canada.

Toronto, July 3.—The holiday on Wednesday, Dominion Day, was generally observed, and interfered with wholesale trade. Travelers had been called in and previous orders were small. This is the dull season, and as yet little reliable information can be obtained as to the outlook.

Montreal, July 3.—Some manufacturers have temporarily closed down, demand not being equal to supply. Dominion Day has curtailed sales, and the week generally has been marked by inactivity in most departments. Until the new government states definitely its intentions as to tariff reform, there will be some anxiety both among manufacturers and importers. The outlook is not bright for the immediate future.

Halifax, July 3.—There is not much activity in general business. Collections are fair. The weather continues very favorable to the crops. In New Brunswick all kinds of crops are looking well except hay, which will be below the average. Business in lumber is active, with considerable shipments to United States ports. Forest fires are destroying a large amount of property in Newfoundland.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JUNE 20, 1896, TO JUNE 26, 1896, INCLUSIVE.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500
Jan. 9	3,471,681	2,587,178	2,409,850	3,308,907	4,183,121

Dry Goods.

The tone of trade is quiet, with a general holiday feeling noticeable. Operators have been more or less busy taking stock and getting ready for the fall season. The market for cotton goods continues slow. Indications point to a considerable curtailment in production through the effect of shutting down machinery to a more or less extent during July and August. It is said that mill treasurers controlling 4,000,000 spindles have agreed to curtail, although some mills propose to keep going right along. The woolen mills are doing but little, and a large amount of machinery is yet idle. Operators do not appear to be favorably impressed with the general outlook, and are disposed to keep their business within conservative limits.

Wool.

The better inquiry for wool has apparently died away, and the present market is as dull as at any time yet. The London sale opened Tuesday with a good English and continental demand, and prices were firmly maintained at the closing rates of the previous sale. This was unexpected, as American operators rather looked for a decline in London, although wools would have to go off in price fully 10 per cent. there in order to make them available to import into this country. The goods market is dull and flat, and no one will buy wool because it is cheap, hence only a hand-to-mouth business prevails. New wools in the interior are held firm and cost cents a pound more than they will command at the seaboard. Australian wool is quiet, but held steady. Carpet wools are dull, but the cost to import is firm.

MINERAL PRODUCTS OF THE UNITED STATES.

The mineral products of the United States for the calendar year 1895 are reviewed at length in the mineral report of the United States Geological Survey. The report, which was compiled by Dr. David T. Day, chief of the division, shows the total value of the products to be $611,795,290. This stands against a product valuation of $527,368,594 for 1894. It is an increase of $80,000,000. The quantity and value of the various products for the year were:

	Quantity.	*Value.*
Pig iron	9,446,308	$105,198,550
Silver	47,000,000	60,766,300
Gold	2,273,629	47,000,000
Copper	381,106,868	38,682,346
Lead	161,440	10,665,040
Zinc	89,686	6,276,020
Quicksilver	36,104	1,337,131
Aluminium	920,000	464,000
Antimony	459	68,000
Nickel	10,302	3,091
Platinum	150	900
Bituminous coal	135,118,193	115,749,771
Pennsylvania anthracite	51,785,122	82,019,272
Building stone	....	34,688,316
Petroleum	52,983,526	57,691,279
Natural gas	....	13,806,650
Brick clay	....	9,000,000
Clay (all other than brick)	360,000	800,000
Cement	8,371,401	5,482,254
Mineral waters	21,363,543	4,254,237
Phosphate rock	1,007,773	3,497,918
Salt	13,669,649	4,423,066
Limestone for iron flux	5,247,949	2,623,974
Zinc (white)	25,000	2,000,000
Gypsum	265,503	807,447
Borax	11,918,000	595,900
Mineral paints	51,375	618,352
Grindstones	....	205,768
Fibrous talc	39,240	370,895
Asphaltum	68,163	348,281
Soapstone	20,045	271,695
Precious stones	....	113,621
Pyrites	99,549	327,345
Corundum and emery	2,102	105,256
Oilstones, etc.	....	143,204
Mica	....	55,831
Barytes	21,529	68,321
Bromine	517,421	134,343
Fluorspar	4,000	24,000
Feldspar	12,900	119,775
Manganese ore	9,547	71,769
Flint	28,500	239,400
Monazite	1,573,000	137,150
Granite	....	60,400
Bauxite	17,069	44,000
Sulphur	1,800	4,200
Fuller's earth	6,100	41,400
Maris	60,000	30,000
Infusorial earth	4,954	20,514
Millstones	....	22,542
Chromic iron ore	1,740	16,795
Cobalt oxide	14,458	20,675
Mannesite	2,200	17,000
Asbestos	795	13,525
Rutile	100	330

The report, in summarizing conditions, says that the general increase is a long step toward recovery from the depression to which the mineral industry, like all others, has been subjected. The total value is slightly less than the greatest ever known, which was over $648,000,000 in 1892. In terms of quantities produced, instead of value received, 1895 is greatest. In other words, prices are lower.

Considering the record of the total values recorded since 1880, the increase from $350,319,000 to $611,795,290 is significant, and the average for these sixteen years gives a fair approximation to what the normal mineral product should have been half way between these dates, or in 1888. Comparing this computed normal product with the actual product, the average yearly gain due to the general growth of the industry should be about $25,000,000, or the product for 1895 should have been $670,000,000. The great products of 1892 and 1895 show the ease with which the mines can respond to any unusual demand. It shows that the capacity is significantly greater than the ability to market the product. In fact, it is difficult to confine the large capacity to actual requirements. With very slight encouragement the products take a very phenomenal stride. In 1892 and 1895 the product most difficult to hold in check has been

iron. This product easily controls the variations in total values, either by the quantity produced or by the changes in price.

While the coal product is so great as to make a significant factor in the total value, it is much steadier, in spite of the extra demand for it in order to produce an extra supply of iron. The increased output of iron in 1895 was necessary because of the great retrenchment in 1894. The railroads ordered as little iron as possible in that year, but ordered freely in 1895 to take advantage of prices while they were still low but advancing. This advance was a marked industrial feature of the year, and continued until September. The prices of steel rails have not yet declined again.

The United States shared in the general increase in gold production, the increase being shown in nearly all the gold-producing states, but coming principally from Cripple Creek and other new camps in Colorado. The gain in the quantity of petroleum, but especially the phenomenal increase in its price, was one of the great features of the year. The steady increase in the gold product since 1892 was kept up during 1895, increasing from 10,010,810 ounces in 1894 to 2,273,629 ounces in 1895, the value of the production for 1895 being $39,500,000. Silver production fell to 47,000,000 ounces from 49,501,122 ounces in 1894, with coining values respectively of $60,766,300 and $64,000,000.

Copper domestic ore production followed the upward tendency of the other metals and increased over 20,000,000 pounds, or $5,500,000. The rapidly increasing product of zinc, which was checked in 1893 and 1894, was resumed. The declining tendency in iron and steel production in 1894 was changed in 1895 to one of the most remarkable increases in production of pig iron in the history of the industry in the United States. It rose from 6,657,388 long tons in 1894 to 9,446,308 tons in 1895, or nearly 42 per cent. This is the largest product ever attained, the nearest approach to it being in 1890. The value increased from $9.76 to $11.13 per ton. Iron ore production increased over 34 per cent., and, with but six exceptions, all of the iron ore producing states participated in this advance.

The total product of coal of all kinds increased 22,376,004 long tons, 25,061,124 short tons, or 13 per cent. The value of the product increased $11,627,470, about 6 per cent. The year was marked by a production considerably in excess of the market demands, and values were much reduced in consequence. Anthracite decreased 13c. per long ton at the mines, and bituminous 6c. This decline in value was general throughout the United States, there being but three or four comparatively unimportant states whose value was larger in proportion in 1895 than in 1894.

Petroleum production showed a notable increase, especially in Ohio, Indiana and California. The year's other features are decrease in stocks, rise in prices, and extension southward of profitable producing districts in the Appalachian range.

The total product in 1895 was largest and the previous year the smallest in recent years. This fluctuation is caused by the rise and decline of the pig iron product, in the manufacture of which almost the entire output is consumed.

The phosphate rock products for the first time reached 1,007,773 tons, worth $3,479,918. The chief feature is the fierce competition of the river pebble deposits on Peace river, in Florida. It is probable that the present low prices will gradually rise this year. Most of the products, including lead, quicksilver, manganese ore, aluminium, antimony, nickel, platinum, limestone for iron flux, gypsum, salt and cement, showed an increase, but there were notable decreases in natural gas, stone, soapstone and grindstones. Feldspar fell 25 per cent. in production, and precious stones $18,629 in value.

CHATTANOOGA'S INDUSTRIES.

Mr. George S. Ochs writes that "such marvelous deposits of raw materials, boundless in extent and rich in quality, scarcely prevail in any other region upon the globe, and all these treasures are the legitimate resources of Chattanooga. They are contributing to the city's wonderful growth, as is shown by the following figures taken from the United States census reports:

"In 1880 the entire county contained 58 industries capitalized at $2,045,000, employing 2,123 hands, who received annually $568,508 in wages, producing an annual output valued at $3,230,006; in 1890 the census report for the city alone showed 283 industries with $6,673,515 capital, employing 5,139 hands, $2,419,446 paid out in annual wages, and $9,449,384 annual product. Since 1890 there has been an increase, the rate of increase being lessened by the general depression which prevailed from 1892 to 1895, but new industries were added in 1894 and 1895, old factories were enlarged, and several very large new factories are now being built, among them a mammoth cast-iron pipe works, immense boiler works, large woolen mills, large wagon factory and a knitting mill, cotton mill and other important large industries are about to be commenced. The census statistics show that there was a uniform growth of about 400 per cent. in industries in the decade between 1880 and 1890, and the next census will show a growth equally as remarkable. During the same period the population of the city and suburbs increased from 14,000 to 35,000, and is to-day 45,000, while the assessed valuation is to-day $16,350,000 on a basis of 60 per cent., against $3,600,925 in 1880. The banking capital of the city is to-day $2,500,000, against $385,000 in 1880. These figures indicate that the rate of growth in material wealth has been even greater than in industrial development. City taxes are lower than ever before, only $1 25 on the $100, and the city expenses have been very materially reduced, being at present (omitting interest charges) only about $6.25 per capita per annum, the average of American cities being that large."

AMERICAN AND ENGLISH STEEL PRODUCTION.

The *Iron Age* says: "The figures of the British Iron Trade Association for the production of steel in 1895 are just at hand. They possess much interest because they reflect better than any other data—better even than the pig iron production—the position of the English iron trade as contrasted with that of our own country. For a number of years the output of Bessemer steel in England has been practically stationary, so that no progress has been made. We compare below the record of the past ten years of the English and the American Bessemer plants:

PRODUCTION OF BESSEMER INGOTS IN GROSS TONS.

Years.	*Great Britain.*	*United States.*
1885	1,304,127	1,519,430
1886	1,570,520	2,269,190
1887	2,089,403	2,936,033
1888	2,032,794	2,511,161
1889	2,140,791	2,930,204
1890	2,014,843	3,688,871
1891	1,642,005	3,247,417
1892	1,500,810	4,168,435
1893	1,493,354	3,215,686
1894	1,535,384	3,571,313
1895	1,535,225	4,909,128

"The fluctuations in our production, of course, are startling, but every serious drop is soon followed by a recovery which carries the record up to a higher point.

"In open-hearth steel we appeared almost hopelessly behind our English rivals at one time. We are still far in the rear, but it is not rash to predict that in three or four years we shall be close at the heels of the English steelmakers. Figures for the two countries compare as follows:

PRODUCTION OF OPEN-HEARTH STEEL INGOTS, GROSS TONS.

Years.	*Great Britain.*	*United States.*
1885	583,918	133,376
1886	694,150	218,973
1887	981,104	322,969
1888	1,292,742	314,318
1889	1,429,169	374,543
1890	1,561,286	513,232
1891	1,511,538	579,783
1892	1,441,830	606,889
1893	1,456,809	787,899
1894	1,575,318	784,976
1895	1,724,737	1,137,182

"It will be noted that we increased our output by over 250,000 tons in 1895 as compared with 1894. It is pretty certain that 1896 will witness a further substantial advance.

"The contrast between the position of the two countries in the steel trade in the year 1885 and in the year 1895 is certainly very startling. Ten years since Great Britain stood at the head with a production of 1,888,045 tons of Bessemer and open-hearth steel. We were a close second, with 1,652,806 tons. In the year 1895, ten years later, Great Britain has not even doubled, rising to only 3,259,962 tons of steel ingots. The United States, on the other hand, had rushed up to a total of 6,046,310 tons. Give us a good year in the rail trade and we shall come very close to putting on record the achievement of having made two tons of steel to every ton made in Great Britain."

RECENT EXPORTS AND IMPORTS.

The Department of Agriculture has issued a circular giving some interesting information on the exports of products of the farm. In 1892, the banner year, we exported nearly $800,000,000 of agricultural products, as compared with $553,000,000 in 1895. The following are the figures for 1892, 1893 and 1895. The first year was the highest year of agricultural products, and 1893 was the smallest for six years, with the exception of 1895:

	1892.	1893.	1895.
Agricultural exports	$799,328,232	$675,382,986	$553,215,317
Other exports	216,403,779	215,647,790	240,182,573

In order to gain less than $25,000,000 exports other than agricultural products, we lost in 1895 $246,000,000 in agricultural products as compared with 1892. This indicates how the tariff of 1894 has helped the farmer in this country. The following gives details as to the value of the export of certain commodities in 1894 and 1895:

Commodities.	1894.	1895.
Wheat flour	$69,000,000	$52,600,000
Wheat	59,000,000	44,000,000
Corn	30,000,000	15,000,000
Oleomargarine, raw	12,000,000	7,000,000
Seeds	8,000,000	3,000,000
Cheese	7,200,000	5,500,000
Butter	2,100,000	900,000
Hops	3,800,000	1,900,000
Hides and skins	3,900,000	2,300,000
Oilcake	8,800,000	7,200,000
Copper	19,200,000	13,900,000

The value of merchandise imports into the United States from principal countries in 1894 and 1895 was as follows:

	1894		1895	
From the	*Value.*	*Per ct.*	*Value.*	*Per ct.*
United Kingdom	$107,372,995	16	$159,119,698	22
British possessions	71,000,478	11	78,846,243	11
Totals	$178,372,473	27	$237,965,941	33
Germany	69,387,905	11	81,011,443	11
Brazil	79,360,159	12	78,831,476	11
France	47,549,974	7	61,560,063	8
Spanish West Indies	78,813,895	12	54,312,468	7
Canada	30,790,916	5	36,534,211	5

The general effect of the tariff of 1894 during the first full calendar year of its operation was an increase of 12 per cent. in imports and a decrease of 9 per cent. in exports. The imports of merchandise in 1895 increased $76,963,254 as compared with 1894, and the exports decreased $84,601,439. In other words, we were $161,564,693 worse off in our merchandise foreign trade during the first full year of the present tariff than in the previous year. These figures are larger than the preliminary statements indicated. The exports to the United Kingdom decreased 10 per cent., and the imports from the United Kingdom increased 48 per cent. The exports to Germany decreased 0.3 per cent. and the imports from Germany increased 17 per cent. The exports from France decreased 19 per cent. and the imports increased 29 per cent. These figures indicate why the United States has not been prosperous. Foreign countries bought less of us, and under the tariff of 1894 we have bought more of them, and the goods we bought ought to have been made in this country and given our own people employment.

PROGRESS OF THE TRANS-SIBERIAN RAILWAY.

Newspaper accounts from Russian sources furnish information regarding the progress made with the construction of the Trans-Siberian Railway. The line is being constructed in sections simultaneously, and the first, at the European end, is completed, so that it is possible to travel direct from St. Petersburg to Omsk, a distance of 2,673 miles. "On the next section of the line, that from Omsk to the Obi river, 384 miles in length, the rails are laid the whole distance, but the earthworks are not complete. On the next section, that from the Obi river to Krasnoyarsk, 467 miles, the rails are also laid, and a beginning has been made of the iron bridge, nearly half a mile long, across the Obi, that is to join the two sections. On this section many of the smaller bridges are built and half the earthworks are completed. The next section is to Irkutsk, a distance of 672 miles, and it presents many difficulties, the most important of which, however, have been overcome. Nearly two-fifths of the earthworks are finished. Beyond Lake Baikal the distance to the head of the Arneer navigation is 701 miles, and in this section work has been begun from the Pacific end; but the difficulties are very great and much tunneling will have to be done, as the line has to rise to a plateau over 3,500 feet high. The next section, however, presents the greatest difficulties, as the line has to be carried through a marshy region which, during the heavy rains, is often completely submerged. The line from Vladivostock is completed for 250 miles; but there can be little doubt that Russia is aiming at a post of the Pacific coast which will be open the whole year through, so that her forces may always be at her command. How this is to be obtained is one of the problems in the far East, and its solution may be more difficult than the building of the Trans-Siberian Railway."

The Edinburgh *Scotsman* says: "The war between Japan and China and the financial arrangements with China which have followed have given the Russian government and the contractors a powerful impulse. * * * In anticipation of the opening of new sections, the zone system of tickets has lately been adopted in Russia for all distances over 300 versts, or 200 miles. In this way it should cost under £5 to travel from Moscow to the Pacific third class. The present slow rate of travel is to be increased by ten miles an hour on both ordinary and express trains, raising the latter to forty miles an hour. Moscow, which is now only sixty hours from London, will be thus nine and a half days from Vladivostock. The railway will revolutionize the routes to China and Japan, and greatly shorten the journey round the world by Canada and the Pacific ocean. Connected with the main project are more important political plans, believed to be the subject of negotiations with the Pekin authorities. Such are the opening of the Sungari navigation from its source in the heart of Manchuria to its confluence with the Amoor, and a branch railway following the line of that river to an outlet on the Yellow sea not far from Pekin. A vast territory rich in coal and minerals will thus be opened up, and Northern Manchuria must ultimately fall to Russia. As to Corea, its fate will lie between Russia and Japan."

A St. Petersburg correspondent of *Der Ostasiatische Lloyd* gives the following account of the promised effects upon travel between the far East and Europe by the Siberian Railway:

"The Siberian line from Cheliabinsk, the western terminus, to Vladivostock will have a length of 7,122 versts. The direction which the branch to the Yellow sea will take is not definitely decided upon, but the total distance from Cheliabinsk to the Yellow sea will be shorter than to Vladivostock. The journey from Vladivostock to Moscow will * * * cost by third class 90.60 marks, by second class 135.90 marks, and by first class 226.50 marks. If we reckon 30 versts per hour the journey from Vladivostock to Moscow will take 303 hours, or 12 days and 15 hours, and as the express trains run 40 versts, only 9 days 11 hours. With an eventual speed of 50 versts per hour the trip will take only 7 days and 14 hours. The tickets from Vladivostock to Moscow hold good for 23 days, and in consequence the journey can so far be made ad libitum. If we compare these charges and length of time with the hitherto exclusively employed steamer routes from Western Europe to Eastern Asia, via Suez Canal, or across the Atlantic ocean, on the American Pacific railway lines and the Pacific ocean, the enormous advantages of the Siberian line become evident. The quickest possible trip from London to Yokohama, via Brindisi, and from there by steamer through the Suez Canal round Southern Asia, takes at least 38 days; in 10 days less Yokohama can be reached across the Atlantic ocean (8 days) to Quebec by the Canadian Pacific line (6 days) and the Pacific ocean (14 days), or in all 28 days. From Bremerhaven to Shanghai takes at least 47 days, and from Marseilles to Yokohama 40 days. Time is furthermore lost by the fact that the steamers only run at certain intervals, while the railway trains start every day. * * * Bremerhaven to Shanghai costs by first class 1,570 marks, second class 950, and third class 440 marks; Marseilles to Yokohama, first class, 1,476 marks, and second class 600 marks. The Siberian Railway will, therefore, on account of speed and cheapness, become of enormous importance, and the fact that Russia exclusively rules this grand route of communication will be of incalculable political significance."

CHEESE PRODUCTION IN THE UNITED STATES.

An Agricultural Department report says: "Nine-tenths of the cheese produced in this country is made in the states of New York, Wisconsin, Ohio, Illinois, Vermont, Iowa, Pennsylvania and Michigan, ranking in the order named. The New York product alone is almost one-half the total, and this state and Wisconsin together make over two-thirds of all. It requires the milk of just about 1,000,000 cows to make the cheese annually pressed in the United States. The value of the annual cheese product of this country varies from $20,000,000 to $25,000,000. About 9,000,000 pounds of cheese are imported annually into the United States. The rate of consumption of cheese in America is about three pounds per capita per annum. Consumption of cheese is apparently somewhat decreasing. Good cheese is approximately composed of one-third water, one-third milk fat and one-third casein, with some sugar and ash.

CHEESE PRODUCTION, ACCORDING TO THE CENSUS.

Producing years.	*Pounds produced.*
1849	105,535,893

BRITISH COLUMBIA.

The *Engineering and Mining Journal* says: "The attention that is now being paid to British Columbia as a promising and safe field for the investment of capital in mining enterprise is fully warranted by the past few years' development work, carried out under great difficulties. These difficulties have consisted, firstly, in the inaccessibility for many months in the year, under ordinary conditions, of some of the best mining territory, and, secondly, even in the summer months, want of continuous communication by water and rail. The latter obstacle is being rapidly overcome, and the most important camps, before snow comes again, will be in much better shape for regular shipments and at fair freight rates instead of those they have hitherto experienced.

"The former drawback, viz., that of a long and severe winter, cannot be changed, but it will be materially mended in the future by the railroad extensions now being carried out, and which will be kept open just as are the Canadian Pacific and other northern roads.

"Trail Creek, with Rossland for its central point, has made already a remarkable record. In 1894 the total value of ore shipped was $125,000, coming from three mines, while in 1895 the value of the shipments was more than $1,000,000, and, to judge from work now going on and shipments already made, it would not be surprising to see an aggregate of $4,000,000 during the present year. Smelters are in successful operation, which will aid development materially, as hitherto only the higher grade ores have been able to stand the expense of freight, smelting charges, and, in some cases, duty, by shipping to Helena, Tacoma, Kansas City and Omaha.

"Nelson is also showing up as a most prosperous center, to which the properties of the Hall Mines, Limited, most decidedly contribute in an important degree. The cost of fuel is not prohibitive, and the Hall Mines Company is sensible in matting its product before shipment, and we have no doubt that the example of this company will be followed by others, and that both cost of treatment and freight to market will thus be materially reduced owing to increased and heavy tonnage over the railroads."

ORANGE CROP OF MEXICO.

Consul-General Thomas T. Crittenden writes to the State Department as follows: "Owing to the injury to the orange trees in Florida from frost, the supply of oranges in the United States has been greatly diminished, causing the merchants to look to Mexico and elsewhere for the deficiency. About 400 carloads were shipped from Mexico to the United States last season. Since the injury to and destruction of the trees in Florida the growers in Mexico are paying greater attention to production. Old trees and old orchards have been pruned, cultivated and reclaimed, and new orchards planted with more care.

"Upon close investigations made by the agents of the various railway companies, the crop this season is estimated to be much larger than ever before. The railroads are gradually preparing for the shipment of at least 600 cars this season. It ordinarily takes eight or nine days, moderately fast freight, to send cars or trains to Chicago; it has been done in six days. The slow freights (due in part to the small number of cars going at any one time), the lack of fruit or refrigerator cars, and the inexperience of the packers here for long distance shipments, are the great drawbacks.

"The orange season of Mexico is from the latter part of September to the 1st of December. This season fits in between Florida and California, thus making Mexico absolute in its season and with practically no competition in our markets. The question of getting orange boxes is also a serious one, as there are in reality no factories for making orange boxes in this country, and importation is almost universal."

WHAT FREE SILVER, 16 TO 1, MEANS.

The Philadelphia *Ledger* says: "In response to various inquiries as to the meaning of 'free silver coinage, 16 to 1,' we reprint the explanation:

"It means in practice that sixteen ounces of silver should be held as worth as much as one ounce of gold. One ounce of gold, American coin standard of fineness—that is, 900 parts of pure gold to 100 of alloy—will coin in gold dollars $18.60. Sixteen ounces of silver, American coin standard of fineness—that is, 900 parts of pure silver to 100 of alloy, at the rate of 412½ grains to the dollar (the weight of the present standard silver dollar)—will coin $18.60 in silver dollars. These sixteen ounces of silver can be bought in the markets of the world to-day for $9.94. There would, therefore, be a profit of $8.66 on an investment of $9.94, being about 87 per cent., if a holder of silver could take it to the mint and coin it without charge into silver dollars. The advocates of free coinage favor a law that will allow any holder of silver bullion—or, in fact, silver of any kind (as the latter can readily be melted into bars)—to have the right to take the same to any mint of the United States and convert it into silver coin free of charge. It is easy to see that if this were done it would not be long, with free coinage, before the country would be flooded with silver coins, and the very large profit to the owners of silver mines would quickly start to work mines at present idle, to the immense advantage of the mine owner."

VALUES OF FOREIGN COINS.

The Treasury Department has issued the regular quarterly statement showing the changes in the value of foreign coins, June 30, as follows:

Coin.	*Countries.*	*April* 1, 1896.	*July* 1, 1896.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 11, 1896.

Very little canvas has been carried by the commercial and industrial ship of late, but advices for the current week are that sail has been still further shortened. In view of the unreasoning blundering at the Chicago convention, the thinking business man cannot fail to see rocks ahead. In the event of failure next November to stem the threatened tide of repudiation and national dishonor, the reverses and depression of 1893–94 are likely to be only foretastes of what will follow. If the more enlightened nations of the earth and the great body of the American people really believed the success of free silver, 16 to 1, probable, something in the nature of a rude check to, if not convulsion of business would probably now be in sight. The mere fact that business has only slackened, that it is not actually fighting off a panic, is a high tribute to the good sense and integrity of the American people, and an evidence that the world confidently expects the defeat of the sympathizers with the Chicago platform.

As far as the choice of candidates was concerned the convention at Chicago was a decidedly open one. No one appeared to have any idea as to the probable choice of the body for the presidency. It was known that Mr. Bland, of Missouri, would have the largest number of votes on the first ballot, but this was understood to be of little significance, because leading candidates who fail to have the requisite number of votes to nominate on the first ballot are very often defeated by some less conspicuous candidate. Mr. Bland continued to lead and to gain for three ballots, which were resultless except in that they developed a formidable antagonist in the person of Mr. W. J. Bryan, of Nebraska, who led Bland on the fourth ballot, and to whom the prize went on the fifth. Mr. Bryan became a conspicuous figure in the convention owing to a vigorous and well-received speech in reply to Senator Hill. Mr. Bryan is a young man, who has served in Congress and has a very considerable reputation as an orator.

The wide difference of views between the majority of the convention, comprising, as finally constituted, two-thirds thereof, and the large minority, in reference to the money plank, found expression in the presentation of a minority report in which a substitute plank was incorporated. In this plank the minority declared their belief that the experiment on the part of the United States alone of free-silver coinage, and a change in the existing standard of value independently of the action of other great nations would not only imperil our finances, but would retard or entirely prevent the establishment of international bimetallism, to which the efforts of the Government should be steadily directed, and would place this country at once upon a silver basis, impair contracts, disturb business, diminish the purchasing power of the wages of labor, and inflict irreparable evils upon our nation's commerce and industry. They further declared that until coöperation among leading nations for the coinage of silver could be secured they favored the rigid maintenance of the existing gold standard as essential to the preservation of our national credit, the redemption of our public pledges and the keeping inviolate of our country's honor, insisted that all of our paper currency should be kept at a parity with gold, declared that the Democratic party was the party of hard money and was opposed to legal-tender paper money as a part of our permanent financial system, advocated the gradual retirement and cancellation of all United States notes and Treasury notes, under such legislative provisions as will prevent undue contraction, and demanded that the national credit be resolutely maintained at all times and under all circumstances. This declaration was voted down, but secured 303 votes.

In revising the platform framed by the subcommittee on Resolutions the full committee made some alterations, one of which is specially significant of the temper of the committee and of the convention. The demand for free coinage in the money plank was made to read "silver and gold" instead of "gold and silver," as the phrasing was originally. The committee wanted to leave no doubt as to the respective places which the two metals held in the estimation of its members. The committee also added a plank denouncing the issuance of notes intended to circulate as money by national banks as in derogation of the Constitution, and demanding that all paper which is made a legal tender for public and private debts or which is receivable for duties to the United States shall be issued by the government and shall be redeemable in coin. The movement which has found its latest expression at Chicago would not have been complete without an alliance between the 16-to-1 idea and greenbackism.

One of the planks in the platform, which should not be passed over without remark, is that dealing with the question of the income tax and the decision of the Supreme Court against it. The plank declares that but for this decision by the Supreme Court there would be no deficit in the revenue under the law passed by a Democratic Congress "in strict pursuance of the uniform decisions of that court for nearly 100 years, that court having in that decision sustained constitutional objections to its enactment, which had previously been overruled by the ablest judges who had ever sat on that bench;" that it is the duty of Congress to use all the constitutional power which remains after that decision "or which may come from its reversal by the court as it may hereafter be constituted," so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expenses of the government. The fact that the Supreme Court could not be made to see that the income tax had been laid in strict pursuance of its uniform decisions for a century did not embarrass the committee which framed the platform, though it has had its weight with other people. What is of particular interest in the plank is the implied threat of a packing of the court contained therein, which deserves the attention of thoughtful citizens. It is as well that the purpose of the men represented by the majority at Chicago should be so clearly manifested; the duty of law respecting citizens is rendered more clear.

Among other things the platform contains a declaration which seems to point to a reversal of the progress made in the direction of a reform of the civil service. This plank declares against "life tenure in the public service" and in favor of "fixed terms of office." The adoption of this policy to its full extent would prevent a Marshall or a Story from filling out upon the bench careers which have made American jurisprudence respected throughout the world, and would overturn the well-considered policy of the fathers of the republic. As regards a fixed term of office, it may be said that in practice it has been found to have vicious results, insuring as it has done under the pressure of the hunger for spoils, a certain end of the tenure of public officers. The policy advocated by the platform involves a retrograde movement and the undoing of much of the good work which has been accomplished during the last decade and a half.

There can be no doubt as to where Mr. Hobart, the Republican candidate for the vice-presidency, stands upon the question of a monetary standard, his expressions in reference thereto being much more clear and vigorous than those of Mr. McKinley. He said, in reply to the address of the committee of notification at Paterson, that the gravity of the money question cannot be overestimated, and that there can be no financial security, no business stability, no real prosperity where the policy of the government as to that question is at all a matter of doubt. He declared that gold is the one standard of value among all enlightened commercial nations; that all financial transactions of whatever character, all business enterprise, all individual or corporate investments are adjusted to it; that an honest dollar, worth 100c. everywhere, cannot be coined out of 53c. worth of silver plus a legislative fiat, and the debasement of our currency would inevitably produce incalculable loss, appalling disaster and national dishonor.

It is, Mr. Hobart said, a fundamental principle in coinage, recognized and followed by all the statesmen of America in the past and never yet safely departed from, that there can be only one basis upon which gold and silver may be concurrently coined as money, and that basis is equality, not in weight, but in the commercial value of the metal contained in the respective coins. "This commercial value is fixed by the markets of the world, with which the great interests of our country are necessarily connected by innumerable business ties, which cannot be severed or ignored. Great and self-reliant as our country is, it is great not alone within its own borders and upon its own resources, but because it also reaches out to the ends of the earth in all the manifold departments of business, exchange and commerce, and must maintain with honor its standing and credit among the nations of the earth. The question admits of no compromise. It is a vital principle at stake, but it is in no sense partisan or sectional. It concerns all the people. Ours, as one of the foremost nations, must have a monetary standard equal to the best. It is of vital consequence that this question should be settled now in such a way as to restore public confidence, here and everywhere, in the integrity of our purpose. A doubt of that integrity among the other great commercial countries of the world will not only cost us millions of money, but that which, as patriots, we should treasure still more highly—our industrial and commercial supremacy."

A REVOLUTIONARY CONVENTION.

The spirit and temper which have marked the proceedings of the Democratic convention at Chicago this week present a striking contrast to those which ruled the gathering of the Republicans at St. Louis. With the exception of one single dramatic incident, the retirement of the silver delegates, the proceedings of the St. Louis Convention were marked by a tone of comparative tranquility. At Chicago there has been a bitter struggle between the silver majority and the sound-money minority from the outset of the session. So great has been the bitterness aroused that one of the most conspicuous Democrats in the country, the ablest debater of the party in the Senate, and four years ago a candidate for the presidency was obliged to submit to the indignity of being deposed from the temporary chairmanship for which he had been designated by the national committee of the party.

At St. Louis the silver delegates formed but a small minority of the convention. At Chicago the silverites formed a large majority, which by arbitrary methods was converted into the two-thirds majority necessary to secure the nomination of a candidate. At St. Louis there was never any doubt, from the outset, as to who should be the nominee for the presidency. At Chicago there never was a time, until the conclusion of the balloting, when any of the candidates could be declared to be even the most probable nominee. The Republicans left St. Louis with no disadvantage beyond that of having lost the support of the silver states of the extreme west, which the party leaders felt that they could dispense with. The Democrats leave Chicago apparently hopelessly divided, for it seems inconceivable that the gold Democrats of the north and east can be led to support the financial plank adopted by the convention, even if they do not nominate a ticket of their own.

The platform adopted begins with the monetary question. It recites that the act of 1873 "demonetizing silver without the knowledge or approval of the American people has resulted in the appreciation of gold, and a corresponding fall in the prices of commodities produced by the people; a heavy increase in the burden of taxation and of all debts, public and private; the enrichment of the money-lending class at home and abroad; the prostration of industry, and impoverishment of the people," declares unalterable opposition to "monometalism, which has locked fast the prosperity of an industrial people in the paralysis of hard times," and demands "the free and unlimited coinage of both silver and gold at the present legal ratio of sixteen to one, without waiting for the aid or consent of any other nation," and that the standard silver dollar shall be a full legal tender, equally with gold, for all debts, public and private, and favors such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract. Furthermore, the convention declares itself opposed "to the policy and practice of surrendering to the holders of the obligations of the United States the option reserved by law to the government of redeeming such obligations in either silver coin or gold coin," and to the issuing of interest-bearing bonds of the United States in time of peace, condemns "the trafficking with banking syndicates which, in exchange for bonds and at an enormous profit to themselves, supply the federal Treasury with gold to maintain the policy of gold monometalism," and demands that the power to issue notes to circulate as money be taken from the national banks, and that all paper money shall be issued directly by the Treasury Department, be redeemable in coin, and receivable for all debts, public and private.

Regarding the subject of revenue legislation, the convention declares that tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the government honestly and economically administered; denounces as disturbing to business "the Republican threat to restore the McKinley law, which has twice been condemned by the people in national elections;" declares itself opposed until the money question is settled to any agitation for further changes in the tariff laws, except such as are necessary to meet the deficit in revenue caused by the adverse decision of the Supreme Court on the income tax, and further announces that it is the duty of Congress to use all the constitutional power which remains after that decision, or which may come from its reversal by the court, as it may hereafter be constituted, "so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expenses of the government." The declaration is further made that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market, and that the value of the home market to our American farmers and artisans is greatly reduced by a vicious monetary system, which depresses the prices of their products below the cost of production, and thus deprives them of the means of purchasing the products of our home manufacturers.

The platform demands the enlargement of the powers of the Interstate Commerce Commission, and such restrictions and guarantees in the control of railroads as will protect the people from robbery and oppression, denounces "arbitrary interference by federal authorities in local affairs," objects to "government by injunction as a new and highly dangerous form of oppression by which federal judges, in contempt of the laws of the states and of the rights of citizens, become at once legislators, judges and executioners," approves of the refusal of the Fifty-third Congress to pass the Pacific Railroad Funding bill, favors the admission of New Mexico and Arizona into the Union as states, and the early admission of all the territories having the necessary population and resources to entitle them to statehood, recommends that the territory of Alaska be allowed to have a delegate in Congress, declares against "life tenure in the public service," and in favor of fixed terms of office, extends sympathy to the people of Cuba, and declares that the Monroe doctrine must at all times be maintained.

Such is the platform adopted by the convention at Chicago. Its declarations upon the financial question seem to have aroused the enthusiasm of the rather hysterical assemblage which adopted it. They have, however, brought the Democratic party to a parting of the ways, and they have lost to the party any chance of securing electoral votes in the north and east, where they will be repudiated with an emphasis that will leave no doubt as to the feeling of the people there upon the financial question.

A WEAK EXCHANGE MARKET.

The foreign exchange situation during the week which ends to-day has been apparently uninfluenced by political considerations. The action of foreign bankers and their representatives here has, in fact, scarcely given any indication that the attitude of the Chicago convention has entered in any way into their immediate calculations or had any effect upon rates. The latter, indeed, at the end of the week are a little stronger. Demand sterling bills, which were quoted at 4.87¾ in the early part of the week, are nearer to 4.88⅛ at its close. Still, even at the higher figures, there is no profit on gold shipments, and the feeling in local banking circles is that foreign exchange is in a better position as regards market conditions than it has been at a similar season for a number of years past. The leading representatives of the banking profession are certainly disinclined to admit that there is any tendency to remit funds to Europe or to withdraw European capital from this country on the bare possibility that the advocates of free silver and of silver monometalism will be successful in the presidential canvass. A number of interviews with leading representatives of international finance are conclusive as to this point, while they also suggest that the slight hardening of exchange rates is due mainly to the check which the steadier tone of our own stock market imposes on the speculative buying of securities for the account of operators in the London share market. The latter movement was referred to last week in these columns. Later advices from the other side confirm the impression that its origin was of a professional speculative character and did not represent any development of a public demand for our stocks abroad. American bonds are, for the moment, practically unsaleable, but it would seem that a portion of the contingent of successful operators in London who usually make "Kaffirs" and mining stocks their specialty, were attracted by the position of "Americans" and reached the conclusion that a decline in our values, based on the possibility of this country being forced to a silver basis, was not supported by the facts. This buying, in spite of its smaller proportions during the week just ended, has resulted in the transfer of a considerable amount of securities to London. In some quarters, the amount is estimated at as much as 100,000 shares of various stocks, and allowing for all exaggeration in the figures the amount actually taken up and transferred to the other side reaches a sufficiently high total to have it made a factor in the exchange market. It is, of course, possible that some of these recent purchases may be returned to us if the political situation should create any acute fear in regard to the silver propaganda and its strength with the masses on the part of the aforesaid foreign speculators. It may be observed, however, that they have evinced no such fears on the outcome of the Chicago convention or the exaggerated utterances and evidences of hostility to foreign financial interests which that body evinced.

Authorities on exchange are not, however, inclined to dwell upon this portion of the situation. The decline in rates and the freedom from further drafts upon the Treasury gold reserve are, in their opinion, the result of other and perfectly natural causes. The first of these is the lack of any demand for remittances to Europe from the commercial and importing trades. The supply of bills from any source is not large, but in view of the comparatively small inquiry the current of opinion in banking circles runs strongly against the renewal of gold shipments and the heavy withdrawals of gold from the Treasury reserve, although the engagement of $500,000 gold for shipment to Germany to-day is contrary to this hypothesis and apparently represents a direct order.

JUNE GROSS EARNINGS FAVORABLE.

Railroad earnings for June prove to be more favorable than early reports of earnings and bank-clearings returns would indicate, the increase shown during that month being larger than in any preceding month since February, and the proportion of gain being almost three times that shown in May. The total earnings of 113 railroads, operating over 88,000 miles of railroad aggregated $35,586,096 in June, a gain over June a year ago of 7.1 per cent., and comparing with a gain of 8 per cent. in June, 1895, over 1894.

The following table, showing the increases and decreases in each month for the past three years, best illustrates the position held by railroad earnings for June and the six months' period of this year:

	1895.	1894.	1893.
June	Inc. 8.0	Dec. 22.0	Inc. 5.6
Six months	Inc. 2.5	Dec. 15.4	Inc. 4.5

Seven months	Inc. 4.8	Dec. 19.0	Inc. 2.0
August	Inc. 1.6	Inc. .9	Dec. 13.0
Eight months	Inc. 4.2	Dec. 14.0	Inc. .8
September	Inc. 4.6	Dec. 5.3	Dec. 9.5
Nine months	Inc. 4.5	Dec. 13.0	Dec. .5
October	Inc. 6.8	Dec. 3.1	Dec. 2.1
Ten months	Inc. 4.7	Dec. 12.8	Inc. 1.0
November	Inc. 6.3	Dec. 1.4	Dec. 6.6
Eleven months	Inc. 4.8	Dec. 10.9	Dec. 1.5
December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	**1895.**	**1894.**
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0
March	Inc. 4.6	Inc. .6	Dec. 13.4
Three months	Inc. 9.5	Dec. .5	Dec. 12.6
April	Inc. 3.5	Inc. 4.5	Dec. 14.3
Four months	Inc. 8.1	Inc. .9	Dec. 13.4
May	Inc. 2.4	Inc. 6.5	Dec. 17.5
Five months	Inc. 7.0	Inc. 2.5	Dec. 14.2
June	Inc. 7.1	Inc. 8.0	Dec. 22.0
Six months	Inc. 7.1	Inc. 2.5	Dec. 15.4

The following table shows the gains or losses in June and the six months' period this year as compared with last, by groups of roads, compared with similar returns for the three preceding months:

	March, 1896.	*April*, 1896.	*May*, 1896.	*June*, 1896.	*Six mos.* 1896.
Grangers	Inc. 21.0	Inc. 13.6	Inc. 8.8	Inc. 15.8	Inc. 16.7
Cent'l west'n	Inc. .3	Inc. 1.7	Dec. .6	Inc. 2.9	Inc. 3.2
Trunk	Inc. 1.5	Inc. .5	Inc. 2.4	Inc. 5.5	Inc. 4.2
Eastern	Dec. 16.2	Inc. 2.5	Dec. 2.8	Dec. 8.2	Dec. 3.9
Coal	Dec. 10.0	Dec. 1.8	Inc. 3.4	Inc. 6.8	Inc. 1.6
Southern	Inc. 1.1	Inc. 3.4	Inc. 6.6	Inc. 8.6	Inc. 9.3
Southwestern	Dec. 5.4	Dec. 3.8	Dec. 9.8	Dec. 2.4	Dec. 1.4
Pacific	Inc. 17.8	Inc. 6.2	Inc. 8.2	Inc. 13.7	Inc. 13.2
Totals, U. S.	Inc. 4.6	Inc. 3.5	Inc. 2.6	Inc. 7.3	Inc. 7.1
Mexican	Inc. 4.3	Inc. 1.9	Dec. .9	Inc. 2.3	Inc. 6.6
Totals	Inc. 4.6	Inc. 3.4	Inc. 2.4	Inc. 7.1	Inc. 7.1

The best showing made in June, it will be observed, was that by the Granger roads, which reported an increase of 15.8 per cent. over June a year ago. The Pacific roads closely approximated this favorable showing with a gain of 13.7 per cent. The next largest gain is that shown by the southern roads, 8.6 per cent., the gains on the other roads varying from 2.9 per cent. in the case of the centralwestern roads to 6.8 per cent. in the case of the coal roads. The decreases reported are those by the southwestern group, 2.4 per cent., and the one eastern road, 8.2 per cent.

Of the 105 railroad systems, operating 113 railroads, 71, or a little over two-thirds, show gains. Gains are most numerous and decreases least common on the Granger roads, where 16 out of 19 railroads reported increases.

The following railroads showed increases in excess of $100,000:

Chicago, Milwaukee & St. Paul	$349,674
Great Northern	256,301
Minneapolis, St. Paul & Sault Ste. Marie	146,515
New York Central	216,699
Norfolk & Western	311,129
Canadian Pacific	147,000
Northern Pacific	296,364
Total	$1,722,482

The only decrease in excess of $100,000 was that reported by the Missouri, Kansas & Texas system, $101,685.

The total earnings of 110 railroads for six months aggregated $222,542,370, an increase of 7.1 per cent. over a year ago, and following an increase in 1895 over 1894 of 2.5 per cent. In the six months', as in the monthly, total, the Granger railroads make relatively the best showing, as is seen by the above tables. The same groups report decreases in the six months' period as during June, namely, the southwestern and one eastern road.

STATISTICS OF CIRCULATION.

The Treasury statistics make the following showing in detail of the general stock of money coined or issued, the amount in the Treasury and the amount in circulation at the beginning of the current fiscal year:

	General stock, coined or issued.	In Treasury.	Amount in circulation July 1, 1896.
Gold coin	$567,931,823	$111,803,340	$456,128,483
Standard sil. dollars.	430,790,041	378,614,043	52,175,998
Subsidiary silver	75,730,781	15,730,976	59,999,805
Gold certificates	42,818,189	497,430	42,320,759
Silver certificates	342,619,504	11,359,995	331,259,509
Treasury notes, act July 14, 1890	129,683,280	34,465,919	95,217,361
United States notes	346,681,016	121,229,658	225,451,358
Cur. certificates, act June 8, 1872	31,990,000	150,000	31,840,000
National bank notes	226,000,547	10,678,620	215,331,927
Totals	$2,194,245,181	$684,519,981	$1,509,725,200

There was a net decrease for the month of June of $11,859,083. The only increases were of $252,044 in gold coin, and of $46,377 in national bank notes. The decreases comprised $541,419 in standard silver dollars, $1,356,822 in subsidiary silver, $641,150 in gold certificates, $5,053,571 in silver certificates, $2,863,145 in Treasury notes of 1890, $111,397 in United States notes and $1,590,000 in currency certificates.

According to the statement showing the changes in money and bullion in the Treasury there was a net decrease for the month of $4,149,125. The decreases comprised $6,840,943 in gold coin, $445,836 in gold bullion and $936,219 in silver bullion. The increases included $2,041,544 in standard silver dollars, $93,552 in subsidiary silver, $1,161,145 in Treasury notes of 1890, $111,397 in United States notes and $666,235 in national bank notes.

As compared with July 1, 1895, there were increases in only three items. Standard silver dollars showed an increase of a little over $190,000, silver certificates a gain of over $11,500,000 and national bank notes an increase of nearly $8,300,000. The decreases included over $24,100,000 in gold coin, about $220,000 in subsidiary silver, over $6,000,000 in gold certificates, over $20,700,000 in Treasury notes of 1890, over $39,600,000 in United States notes, and over $23,500,000 in currency certificates. The total circulation shows a decline of over $94,400,000 for the fiscal year ending June 30 last. The circulation per capita is calculated on the basis of an estimated population of 71,390,000 at $21.15. This represents a decrease of 20c. for the month of June, and of $1.81 as compared with July 1, 1895.

It will not escape attention that while less than a fifth of the general stock of gold coin is in the Treasury, the rest being classed by the statistics as in circulation, less than an eighth of the standard silver dollars are current among the people. All the efforts made by the government to force the silver dollars into circulation have thus far failed. Indeed, their success has never seemed probable, the coin not only being inconvenient, but also having to struggle against the popular knowledge that it does not contain anything like its face value of the metal of which it is composed. The case is different, of course, with the subsidiary silver, which is a convenience, and of which, though it is only a token coinage, nearly four-fifths is in circulation.

EXPANSION OF MINING INTERESTS.

The growth of the mining excitement in London seems to have merely suffered a temporary check from the recent political troubles of which the Transvaal Republic has been the scene, or from the outbreak of the natives of the new auriferous British possessions in South Africa. It would seem that the incidents in question have been chiefly effective in stopping the creation and floating of what are known as wild-cat speculations in alleged gold-mining properties and in doing away with part of the speculative inflation that accompanied the movement. In fact, to judge from the published utterances of the leading authorities on such subjects in the British press, the London mining interest is in a far healthier state than before the events of last winter, and is now likely to exhibit phases that will cast even the phenomenal developments in this connection during the past few years into the shade.

The enormous extent of the mining interests which now center in London are fully appreciated in this country. It has been recognized here that mines, and particularly gold mines, have become the chief vehicle of speculation there, and that the mining department of the London Stock Exchange is now the scene of the principal speculative activity of all Europe. The enormous volume of capital that has gone into such enterprises is, however, but dimly appreciated, nor has the American public fully realized the fact that while the mineral capabilities of portions of our own country would entitle them to share in the movement they have been practically ignored.

It is, however, interesting to note the number and variety of many enterprises that find place in the London stock market and receive support from British and continental capital. This is exhibited in the pages of an annual publication issued in London under the title of the "Mining Manual." The number for 1896 has just appeared and excites comment even there where the dimensions of the movement are well recognized. The publication in question aims at presenting all attainable facts and statistics regarding mining companies known to the London market somewhat upon the plan of our own well-known Poor's Manual of American Railroads. The "Mining Manual" for 1896, however, according to the notices of it that have appeared in the British financial journals, constitutes a volume of 1,300 pages and embraces statistics of no less than 2,700 mining companies. This represents an increase of more than 600 pages in the volume itself and a gain of something like 1,560 in the number of new companies that have been brought out since last year. In 1887, when the book first appeared, it contained references to some 800 companies only which represented a nominal capital of about $400,000,000. As the statistical information now given is apparently not tabulated, it is impossible to give the aggregate capitalization which the 2,700 separate mining organizations of the present year represent. Taking the average capital on the same basis as in 1887 it would seem that the nominal par value would be not far from the enormous total of $1,500,000,000, though this is necessarily a mere guess, the probabilities being that the actual figures are really larger.

Commenting on the growth of the mining industry in its relations to the principal European market, the London *Financial News* observes: "The manual treats of diamond mines, copper mines, tin mines, coal mines, iron mines, silver mines, ruby mines, etc., but the greater portion of its voluminous information is devoted to gold mines; indeed, in this respect it might not be a misnomer to call it the Libro d'oro. Divided into sections, it deals separately with Australia, with Witwatersrand, and with Indian mines; and each section is again subdivided, so as to result in a perfect simplicity of arrangement. Now the growth of this manual is instructive, because it is typical of the development of a great and ever-increasing industry. Witwatersrand, Rhodesia and Westralia are all more or less contributors to the expansion. The world's gold supply for 1895 proved to be the largest of recent years, showing an increase of 679,057 ounces, worth about £2,376,700, over the production of 1894. Of this increase South Africa is responsible for 257,609 ounces, the United States for 193,451 ounces, and Australasia for 158,441 ounces. South Africa, in this calculation, virtually means the Transvaal, inas-

much as Rhodesian mining is as yet in the unproductive stage. The fact is a significant one that South Africa during last year turned out no less than 2,281,773 ounces of gold. Even this ranks second in amount to the output of Australasia, which was 2,365,165 ounces. Considering that the deep-level properties in the Rand have not yet been worked to any extent, and that West Australia has only, so far, been scratched, we may confidently look forward to a much bigger annual production in the course of the next few years. Many of the mines which now figure in the manual as not having entered the dividend stage will shortly be crushing regularly, and rewarding, no doubt, the faith and patience of their shareholders. Some there are which are destined to disappoint expectations, and to disappear from the record with their mission unfulfilled. It would be idle to suppose that the 2,712 companies of which particulars are furnished are all destined to live and achieve satisfactory results. In every enterprise there are some who fall by the wayside, and with 1,565 new companies it would be a marvelous thing if every one were to triumph over the ills that beset such speculative ventures. The great fact is that the tide of mining success is rising, especially in the case of gold mining. Silver is, unfortunately, under a cloud, and many once prosperous mines are now shut down altogether, or are only carrying on a hand-to-mouth existence. The chief diamond mines are flourishing, copper mines are doing a splendid and highly profitable business; but it is to gold we must turn for the explanation of the manual's additional 600 pages, and to gold that we must look for that further expansion which is already casting its shadow ahead."

COMMISSIONER KNAPP ON RAILROAD POOLING.

The conditions under which railroad pooling should be permitted have formed a fruitful topic of discussion since the enactment of the Interstate Commerce law, and particularly during the last four or five years, and it has not escaped attention that a different view of the matter is now taken in many quarters from that which formerly prevailed. There is more of a disposition to regard pooling rather in the light of an economic arrangement than of a sort of conspiracy, as it used to be sometimes called, and to examine at least the arguments urged in its favor. In this temper of the public mind, such a discussion of the pooling question as that contained in a paper submitted by Commissioner Knapp to the American Academy of Political and Social Science will be welcomed because of the acquaintance with the bearings of the arrangement which his position as a member of the Interstate Commerce Commission has given him and because of his point of view, which is neither that of the carrier nor of the shipper.

In the opinion of Mr. Knapp, there are three ways of escape from the difficulties of the present situation as regards the railroads. Two of these he rejects rather summarily, namely, government ownership, which he regards as unsuited to the spirit of the country's institutions, and universal consolidation, which he regards as impracticable as well as objectionable on other grounds. The third alternative is "to allow the various railroads, while retaining their present organization, identity and ownership, with such extensions as naturally result from the growth of systems, and continuing their independent service to the communities with which they are severally identified, to contract freely and lawfully with each other for the movement of competitive traffic without that demoralizing strife which invariably results in rate discriminations." This, Commissioner Knapp urges, implies no general consolidation of corporations and no merger of financial interests, but amicable coöperation in the conveyance of persons and property between competitive points. It is, he says, the one sensible and practicable plan adapted to present conditions, and suited in the highest degree to existing requirements, and it is a policy which would permit and invite the conduct of transportation upon principles consonant with the nature of the service and beneficial to the people and the railroads alike.

As regards the conditions under which pooling should be legalized, the commissioner suggests, in effect, that there should be regulative measures sufficient to secure needful control of the rates and conduct of railway carriers so as to provide the means for testing the justice of such rates and conduct when they are asserted to be oppressive and unequal, and furnish the machinery for substituting the standard adjudged to be just and reasonable. In the commissioner's judgment the special weakness of the law, as as it now stands, is the want of any binding force in the decisions of the commission, though made upon facts ascertained after notice to the carriers, and full opportunity for all parties to be heard. At present a disobedient carrier can have practically a new trial in the courts of the case decided by the commission, and not only that, but he may not even appear before the commission when called to account unless compelled by subpœna to do so, and, if appearing, it may give only such evidence as it chooses, and then, if the decision is against the carrier, it can meet in the courts the *prima facie* case found by the commission, with such new evidence and defense as it is able to present.

The correction of this defect in the present law is, in Commissioner Knapp's opinion, the most urgent and needful amendment in connection with legalized pooling. It is, he thinks, essential to efficient and useful regulation that the commission should have authority to determine in the first instance, and to the extent of a court of first instance, whether particular rates or practices of which complaint is made and which are investigated upon notice and opportunity to be heard, are, or are not, in violation of the act, and that its decision should be binding upon the parties reversed upon a judicial review. Theoretically, at least, the commissioner finds no occasion for specific and exceptional securities against the asserted dangers of legalized pooling, though he suggests some provisions as to the filing of pooling contracts, and so forth, so as to guard against unexpected abuses.

For example, he suggests that every such contract should be filed with the commission and become effective within a reasonable time thereafter—say ten or twenty days—unless, in the meantime, and upon examination thereof, the commission should discover in its provisions sufficient reason for official disapproval. In such event the contract should not go into effect at all, except by decree of a designated court, upon appeal thereto. It would also be expedient, he thinks, to empower the commission, after a pooling contract had been put in operation and its effects fairly observed, but upon notice to the contracting parties and an opportunity for them to be heard, to order the cancellation of such an agreement, thereby terminating its validity and remitting the carriers to the situation in which they were placed before the contract was executed. In that event he suggests the agreement should remain valid and non-enforceable unless and until a competent court should direct its restoration. The commissioner does not believe that occasion would ever arise for applying so drastic a remedy. Yet, he says, this power of cancelment might properly be held in reserve for extreme cases and peculiar emergencies. As regards the general question, he confesses himself unable to suggest a more suitable scheme than that contained in the Patterson bill, which passed the House at the last session but failed in the Senate.

THREAD MANUFACTURERS' AMALGAMATION.

The fact that two of the four concerns which are to be united under the title of J. & P. Coats, Limited, have establishments in the United States as well as in Great Britain makes the combination, just announced in London, of interest to Americans. The scheme is, in effect, a recasting of the capital of the existing Coats Company and the fusion with it of the works and business of the Messrs. Clark, Jonas Brook & Bros. and Messrs. Chadwick & Bro. Such a scheme would on this side of the Atlantic doubtless be termed a "trust." As it is, the announcement is not unfavorably received by the London stock market, and one of the leading foreign financial papers, the London *Statist*, in referring to the matter, says: "One main advantage of the combination will be the removal of competition. The policy is to be adopted of retention of prices at those hitherto charged, with only higher valuations where prices have been unduly depressed by unhealthy and excessive competition. Economies in cost of manufacture and distribution of course will result from the combination. Some of the incorporated undertakings will exercise the right to take a proportion of the purchase consideration in shares at the issue price of £50 per share, and the balance of shares, to be offered to existing shareholders at the same price, will give the right to the allotment of three new shares for each ten existing ordinary shares."

For the purpose of carrying out the "deal," as it would be called here, the proposition submitted to the stockholders of the Coats Company is for an increase in its existing share capital. This, although the transaction is really an amalgamation of the four interests in question, makes it take the form of a purchase by the Coats Company of its competitors. It is proposed, for the purpose of acquiring the other undertakings, that the capital of the Coats Company shall be increased by the creation of 50,000 6 per cent. preference and 125,000 ordinary shares of £10 each, which will raise the share capital to £2,500,000 in 250,000 preference shares and £3,000,000 in 300,000 ordinary shares, the original debenture issue of £2,000,000 remaining unchanged. The vendors of the several businesses take all the new preference shares and a certain number of ordinary shares.

As already stated, the decision of the directors is that £50 per share is a proper price for the balance of the ordinary or common shares to be offered to the stockholders. According to the last statement of their accounts, the profits of the various businesses are equal to 23 per cent., or £3,000,000 ($15,000,000) per annum on the capital which it is intended to create. The circular goes on to say that "these aggregate profits will be largely increased by the benefits which must necessarily result from the amalgamation of the four concerns. It is not intended to sell at higher prices than those charged by the various companies when they were separate; but a marked improvement will necessarily take place in markets where they have been unduly depressed by unhealthy and excessive competition. It is obvious also, leaving the readjustment of selling prices out of the question, that large savings will result not only in the cost of manufacturing, but in the cost of distribution, and the directors are, no doubt, justified in saying that they feel confident that the shareholders have reason to congratulate themselves upon the success which has attended the negotiations. With reference to £2,000,000 of the amount to be paid in cash to Messrs. Clark and Messrs. Jonas Brook & Bros., it seems that they have availed themselves of the option to accept this sum in ordinary shares at the issue price, and they will, therefore, receive 40,000 ordinary shares in lieu of £2,000,000 in cash, binding themselves at the same time not to dispose of them before July, 1898."

The actual amount that is to be paid for the three concerns that are to be amalgamated with J. & P. Coats, Limited, is not stated, and there is, according to the English papers which have commented on the transaction, some vagueness about the disposition of the surplus fund of £800,000, or $4,000,000, that the existing Coats Company has accumulated. As before stated, however, the transaction meets with the approval of holders of the Coats' shares, which are quoted at 51½ in the London market, indicating a substantial premium for the new allotment, or, in American parlance, rights to subscribe. The plan is, indeed, an interesting one, and has, as observed in the first paragraph, a family resemblance to the lines on which a large number of our own industrial combinations were formed.

RAILROAD RECEIVERSHIPS AND FORECLOSURES.

The record of railroad receiverships for the first six months of 1896 is, on the face of the figures, a disappointing one. The *Railway Age*, which, in its last issue, presents a tabulation of the statistics of the subject, points out that between January 1 and June 30 eighteen roads either confessed or were forced into bankruptcy, and that their aggregate mileage was no less than 3,896 miles, while their bonded debt was approximately $131,068,000, and their aggregate stocks $59,293,000, or a total nominal capital of $190,361,000. This compares unfavorably with the first half of 1895, when the record of receiverships included eleven roads only, whose mileage were altogether 2,409 miles, their combined bonded obligations and stock being $149,615,000. The same authority also gives the record for the entire year 1895, in which thirty-one roads became bankrupt, representing 4,089 miles of lines and a capital of $369,075,000. The figures for the full year 1894 being thirty-eight roads, with 7,025 miles and over $395,000,000 stock and bonds, though even this falls below the disastrous results of 1893, when

there were seventy-four receiverships of such corporations, representing no less than 29,000 miles of roads and over $1,781,000,000 in indebtedness and stock.

Commenting on the increase which the receiverships of the past six months display in number and in the mileage and capital involved over those of the corresponding period last year, the authority in question is disposed to ascribe them to the disappointing conditions which prevailed in general business since January 1. As it observes, such circumstances are invariably reflected by the crop of railway defaults and receiverships, and it holds that if business had shown the expected revival many roads that were close to bankruptcy during the last three or four years would have experienced an increase in earnings, and, consequently, would have been able to meet their obligations and averted the widespread losses which every case of financial collapse on the part of such corporations involves. The decrease in the number and extent of receiverships in 1895, it points out, was the result of the feeling that good times were at hand, but the end of the year found rates low and earnings in many cases very lean, so that some companies have been forced to abandon the struggle and seek the protection of the courts which receivership affords. Hence the large increase in the receiverships for the past six months, the ratio, indeed, being one which, if kept up for the current half of the year, would make the 1896 greater than those of either 1895 or 1894, though, happily, less than those of the appalling year 1893.

These considerations, as the journal from which these statistics are quoted observes, must, however, be qualified somewhat by an examination of the individual cases of receiverships. It would, indeed, be impossible to form the conclusion therefrom that we are on the verge of a new era of extensive railroad bankruptcies. The list it furnishes of the different cases is as follows:

ROADS PLACED IN THE HANDS OF RECEIVERS FROM JANUARY 1 TO JULY 1, 1896.

	Miles.	Bonded debt.	Capital stock.
Galveston, La Porte & Houston	56	*$1,568,000	$1,120,000
New York & Sea Beach	6	428,000	500,000
East Shore Terminal	3	1,443,000	1,120,000
Chester & Lenoir (N. G.)	99	150,000	273,000
Cumberl'd & Ohio, North. div.	27	300,000	*300,000
Chicago & Lake Superior	3	*50,000	*50,000
LittleRock, Hot Springs & Tex.	5	*500,000	*500,000
Baltimore & Ohio	2,094	94,000,000	30,000,000
Pittsburgh & Western	352	15,000,000	13,500,000
Central Vermont	652	7,000,000	2,050,000
Excelsior Springs	8	150,000	150,000
Detroit, Lansing & Northern	320	5,116,000	4,300,000
St. Louis, Kennett & South'n.	20	135,000	180,000
Norfolk & Ocean View (N. G.)	8	28,000	50,000
Duluth Transfer	20	2,000,000	2,000,000
Pecos Valley	164	2,340,000	2,340,000
California & Nevada (N. G.)	23	*500,000	*500,000
St. L., Avoyelles & Southw'n.	36	360,000	*360,000
Totals, 18 roads	3,896	$131,068,000	$59,293,000
Total bonds and stock	---	----	$190,361,000

* Partly estimated.

It will be seen from this that the total is very much swollen by the failure of the Baltimore & Ohio, and of its affiliated corporation, the Pittsburgh & Western. These two companies furnish no less than 2,446 miles out of the aggregate of 3,896 miles, or 62 per cent., and their united bonded and share capitals foot up $152,500,000, or 80 per cent. of the total capital involved in the railroad receiverships of the past six months. It is needless to remark that subsequent developments have shown that the disaster of the Baltimore & Ohio was a belated one, and that local and exceptional causes had averted receivership and reorganization that were due several years ago. While failing therefore in point of time within the six months under consideration, the causes for the breakdown in this case must be sought in the events of 1893, or even an anterior time. Apart from the Baltimore & Ohio bankruptcy, the only roads of any importance included in the totals are the Vermont Central, which case may be described as similar to that of the Baltimore & Ohio, and the Detroit, Lansing & Northern, which had also been in an unstable condition for some years past. The last named lines, and the Vermont Central, contribute 982 miles of lines to the aggregate, and about $18,000,000 to the total capitalization. Leaving them out of consideration, the remaing receiverships are comparatively unimportant, only one company, the Pecos Valley, possessing over 100 miles of road.

The past six months have also been productive of an increased number of foreclosures, which, however, are the culmination of reorganization processes. The record in this respect is 25 roads against 20 in the first half of 1896. The stock of the roads thus judicially sold was $135,000,000, and their bonded indebtedness $213,000,000, or a total of $350,000,000, against a like total capital of $100,000,000 in the first half of 1895. Included in the number that have just passed under the hammer as a preliminary to restored solvency are the St. Louis & San Francisco, with 1,046 miles and $97,000,000 capital; the New York, Pennsylvania & Ohio, representing 429 miles and $166,000,000 in par value of bonds and stocks, and the Grand Rapids & Indiana, whose road embraced 436 miles and carried about $19,000,000 of securities. The other important companies foreclosed in the same period are the Omaha & St. Louis, the Louisville, St. Louis & Texas, the Green Bay, Winona & St. Paul, and the Seattle, Lake Shore & Eastern. The record in this respect is a satisfactory one, and due notice must also be taken of the fact that the current six months of the year will witness further progress of the same kind, the foreclosures now in prospect, including such important companies as the Oregon Railway & Navigation, the Northern Pacific, Philadelphia & Reading and Norfolk & Western.

TRADE REVIVAL IN AUSTRALIA.

Melbourne, June 5.—After great depression and distress occasioned by the banking crisis of three years ago, the material interests of the seven Australasian colonies are once more becoming settled and healthy. The severe drouth of last year, by destroying many millions of sheep, principally in New South Wales, and more than one-half of the cereal crops in Victoria, New South Wales and South Australia, certainly delayed the improvement. But the shortage in the wool clip of the colonies (expected to reach 150,000 bales, of about 350 pounds per bale, by the 30th of the present month, when the shipping season of 1895–96 closes) has been more than compensated for by the rise in the market value of wool, while the shortage in the crops has, partly on account of the protective duty in Victoria and partly on account of the cost of bringing wheat (say 9d. to 10½d. per bushel) from foreign countries, caused the farmers to secure a somewhat better return than even in normal years. Certainly this better return has been obtained at the expense of the consumer generally, and the loss of the export trade in wheat and flour for a season has to be taken into account, but in the meantime the agricultural classes have been benefited by high prices. But there has been considerable irregularity in the distribution of the gross proceeds, for many squatters have obtained next to no wool and many wheat farmers next to no grain. Those who have wrought under favoring circumstances have, however, done very well.

Causes contributing to the improvement which is now slowly making progress are principally (1) the prosperity, partly real, partly fictitious, of mining; (2) the continued development of industries based on the flocks and herds of Australasia; (3) the gradual settlement of the financial troubles which commenced some five years ago and culminated in the crisis of 1893; (4) the great relief experienced as one consequence of the troubles and the crisis in the lessening of the annual interest remittance to London, and (5) the excessive cheapness of money.

Gold mining is very prosperous in the colonies of Victoria, Queensland and New South Wales, as well as in the north island of New Zealand, for although the increase in the yields is but moderate, working expenditure is much lower than formerly, a larger margin of profit being left for shareholders. Victoria maintains the lead as a gold-producing colony, the yield being now at the rate of 750,000 ounces per annum. This yield could be greatly increased if more capital and energy were thrown into the development of the gold fields. Victorian gold mines are, as a rule, conservatively and economically controlled by men of long experience, and it is quite the exception to find any of them overcapitalized or even fully capitalized.

Had but one-half of the capital raised in London to buy doubtful Western Australian mining claims (not mines) been expended in Victoria large returns would have been quickly received, for the gold-producing capabilities of the colony appear to be almost inexhaustible. The Bendigo district alone is making far better monthly records of yields than the whole of the colony of Western Australia, whose export is not growing, being at the rate of less than 250,000 ounces per annum. Yet the nominal capitalization of Western Australian gold-mining ventures in London is estimated at over £30,000,000. How this has been brought about is well depicted in the report of an independent inquirer, Herr Schmeisser, extracts from which appeared in the London press at the close of April.

In Queensland, as in Victoria, larger results could be obtained with more energetic administration, desirous of exhausting a mine in the quickest possible time. The north island of New Zealand has of late been almost as much favored as Western Australia in the matter of flotations in London, while production has been more quickly stimulated.

A modern feature of mining enterprise, from the point of view of company formation, is the very active participation of great London financial houses, including even the Rothschilds. These houses are great supporters, and, indeed, have the controlling interest in the principal "exploration" companies, although their names do not appear. The "exploration" companies are not and need not be heavily capitalized. By the help of able and highly-paid experts they do the pioneering work. Subsidiary companies to work specific claims, generally well tested, are formed, but again the names of the principal promoters do not appear. A few large financial houses have, in the way suggested, had greatly to do with the flotation of Western Australian and New Zealand mining claims. They have also acquired one-fifth share in the Anaconda mine in Montana, and they are the real proprietors of the Sulphide Corporation, which is spending over £300,000 in buildings, plant and machinery at Newcastle, near Sydney, for the purpose of treating the sulphide ores of Broken Hill, in New South Wales. Up to a certain point the intervention of these houses has been good, but once they become simply traffickers in any mining venture that will sell, whether it be good, bad or indifferent, their influence will be decidedly mischievous. However, as the matter stands, it is a sign of the times that old "merchant-banking" houses are now actively, although not visibly, engaged in promoting mining enterprise throughout the world.

The Broken Hill mines are commencing to put out their sulphide ores, of which the supply is enormous. These ores give from five to thirty ounces of silver per ton of silver-lead bullion. At the minimum they are rather lead than silver mines. The two large companies formed to treat the sulphides in the colonies are actively pushing their works to completion. The Sulphide Corporation (Ashcroft's process), to which reference has been made above, has found, however, that its patents in New South Wales (the very colony in which it has to work) are invalid, although good in other countries, the explanation being that the local patent law does not permit disclaimers. If the claim is excessive the application falls to the ground. Efforts are being made to obtain an amendment of the law, and they deserve to be successful.

The Mount Lyell copper-silver mine in Tasmania is the greatest favorite amongst the speculators on the Stock Exchange. The company are just about to commence treating the wonderful ores at their command, and the market is in a state of great excitement. Shares which originally cost the promoters about six shillings each have risen to £9 5s., giving a total market value of the whole 300,000 of over £2,700,000. Yet no actual results on a large scale have yet been achieved.

The second cause for the increasing prosperity of the Australasian colonies, as enumerated above, is the continued development of industries based on the possession of large flocks and herds. Such are the frozen-meat trade and the production of hides, skins and tallow. Prices for frozen meat and tallow are, unfortunately, ruling low, but then the production has immensely increased, so that the gross return shows a large expansion. If, for instance, tallow now fetches only two-thirds of the price ruling four years ago, the Australasian contribution has threefolded.

The gradual resettlement of the financial affairs of the colonies, following losses and dislocation of interests on a gigantic scale, is infusing fresh confidence into the public mind. New conditions are growing, and those conditions are distinguished prominently by soundness. The resettlement, with the writings-down of capital, the compromises with creditors, the reduction in interest paid on debentures, and the suspension of dividends on many millions sterling of capital, has had the effect of reducing the annual interest charge payable by the colonies to England by at least £1,500,000, and as industrial, trading and financial concerns receive the benefit of this reduction, great relief is indirectly felt by the producing interests. The public and private indebtedness of the colonies to England (exclusive of mining investments, the advantage from which altogether rests with the colonies) is now about £302,500,000, carrying an interest charge of rather less

than £12,000,000. The losses made by British investors during the last few years may be placed provisionally at between £15,000,000 and £20,000,000.

Notwithstanding, perhaps rather in some measure in consequence of the financial troubles, coin has accumulated, and the Australasian banks now hold £28,000,000 in gold, the population of the colonies being something over 4,000,000. This accumulation is perplexing to the bank managers. Of course, if money could be profitably utilized in London, considerable shipments would be made thither, but it will not pay to ship gold at 15s. per £100 for freight and insurance to lend it at ¼ to ½ per cent. per annum. When, however, rates show a substantial advance in London, gold will flow away from the colonies. Yet the production of £9,000,000 worth of new gold every year must always imply large reserves to be held by the Australian banks. Owing to the great fall in the value of real property, as well as to the accumulation attendant upon depression, interest rates have been greatly reduced in the colonies. In Melbourne and Sydney good mercantile bills having three months to run can be discounted at 3½ per cent. Plenty of money is obtainable for mortgage purposes with ample margins at 4 to 4½ per cent. The large banks which did not succumb during the crisis are allowing only 3 per cent. for fixed deposits, and contemplate a reduction to 2½ per cent. They hold, moreover, current account money, bearing no interest, to the extent of 40 to 45 per cent. of their total deposits. As regards the reconstructed banks, two of them, the Bank of Victoria and the National Bank of Australasia, are now rapidly releasing by anticipation their deferred deposits; the Commercial Bank of Australia (headquarters at Melbourne) is negotiating with its creditors for a modification of the terms of its scheme of reconstruction, and it is believed that the Australian Joint Stock Bank (Sydney) and the Queensland National Bank (Brisbane) will follow its example at an early date. The difficulties created by the *moratorium* necessitated by the crisis of 1893 are being solved more rapidly than could at one time have been thought possible, and the banking outlook is now fairly reassuring.

The prospects of the coming season are varied. In the pastoral districts, which were devastated by the terrible drouth of 1895, the clip of wool will be very small, but in other districts it will be large and of good growth. A larger area has been sown with wheat than ever before known, and as the climatic conditions have so far been almost perfect, there are great expectations of a full crop. But nobody can prophesy with safe respecting Australian wheat crops until they are garnered, for up to the last day they are subject to unexpected damage from various possible causes. Still the farmers are in good heart.

SPANISH TRADE AND CUBA.

An impression certainly prevails in this country that the basis of the tenacity with which the Spanish people and government cling to the possession of Cuba is a sentimental one. Despoiled of every vestige of its western empire, what could be more natural than that Spain should cling with desperation to the last vestige of its American possessions. The title "Ever Faithful Island" is accepted as an evidence that Spaniards only think of the loss of the last of their important footholds in the new world. It is assumed that the expense of the island is a serious drain upon the nearly wrecked Spanish treasury, and that the country is wasting its resources and energies in the struggle with the Cuban separatists for a vain object, an illusion born of the centuries during which Spain and the adventurers it sent forth laid open the Western hemisphere to European progress.

It would certainly seem to dash such exalted ideas of the guiding principles of the Spanish people in this struggle to read a recent article in the London *Economist* apropos of the struggle between Spain and the Cuban liberation party. In its cold-blooded sentences and its constant citation from Spanish official statistical authorities a clue is found to the mystery. There is nothing sentimental, or at any rate very little of that character, in the struggle. According to the *Economist* the official statistics of the Madrid government show why "Spanish agriculture, manufactures and shipping interests are so anxious to preserve a market in which they enjoy a privileged situation, owing to the differential tariff duties that so heavily handicap their foreign competitors in Cuba and Porto Rico. In 1894, the year before the present Creole insurrection broke out, Spain sent to Cuba exports to the value of $23,000,000, and in the previous year the Spanish exports to Cuba had been $30,000,000. * * * Spanish manufacturers do not export to the rest of the world outside of the Spanish colonies anything to be compared to what they send to Cuba. Indeed, the exports of Spanish manufactured goods to places other than the colonies do not amount to $5,000,000 annually."

In the category of Spanish exports to the colonies, agriculture, according to the *Economist*, stands some distance behind manufactures. Nevertheless, even in bad crop years the peninsula has been able to send to its West India possessions breadstuffs of every kind that, owing to the heavy tariffs it inflicted on its western islands, might have been more easily introduced from North America. "The Cubans," the writer observes, "have often complained of these higher duties on breadstuffs that allowed of American, Russian and Eastern grain being imported into Spain, and in some sort nationalized before it is reëxported, still with a good margin of profit on the markets of Cuba." The greater part of the peninsula's exports to Cuba are taken out in Spanish bottoms, and the traffic has greatly contributed to the revival of Spain's merchant marine.

The commercial and financial relations of the colony to the mother country are also referred to. The article says: "No approximate figures can be given of the profits that the commercial and banking classes in Spain derive from the connection with the colonies, but it is supposed that they have been considerable. It is no secret also that the thousands of Spaniards who go out to both islands as colonial officials or to seek their fortunes out there in business are all much addicted to the habit of hoarding up the proceeds of their more or less prolonged stay in the West Indies, with a view to come home and to live as 'Indianos' on their earnings, or as members of the very numerous class of pensioners of the colonial treasuries for life, for which the Creole taxpayers have to pay so liberally.

"The trade with Cuba and the growth of the relations between the imperial and Cuban treasuries have led to the creation of not a few banks and financial establishments that have assisted the Spanish government in placing Cuban loans, Cuban bank stock, Cuban railway shares and bonds, and the securities of other concerns, whose solvency, and indeed whose very existence, is more or less staked upon the keeping up of the present ties between Spain and her West Indian colonies. Thus the governments of Spain were able to consolidate the debts and deficits of Cuba, after the ten years' rising of 1868–79, and to convert the same in 1886 into a 6 per cent. issue of £15,000,000 of redeemable bonds, guaranteed by a lien on the revenue of the Cuban custom house, and in default by all the revenues of the colony, with the subsidiary guarantee of the imperial Treasury. The greater part of these 6 per cent. bonds are held by Spaniards.

"Spanish papers and economists have stated that, to say the least, several hundred millions sterling of Spanish capital and savings are embarked in Cuban loans, public works, trade, and even plantations, but beyond that the Spanish tobacco monopoly farmers are very much dependent on Cuba for their best raw material. The financiers and politicians of Spain are therefore, to a certain extent, justified in their contention that it is an error to suppose, as many people do in Europe and America, that Spain is wasting her energies and her resources in endeavoring to keep her hold upon a colony that costs her more than it is worth. The Spanish government and the Spanish people seem to show so much determination in their struggle with the Cuban separatists, and in their dogged resistance to United States interference or mediation, because they are convinced that if they only vanquish the Cubans once more they will recoup themselves in a very few years for the costly sacrifices made with a view to crush the insurrection, even if the burden of these sacrifices, as everybody foresees in Spain, has to be borne for some time chiefly by the Spanish Treasury and the Spanish taxpayers."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

In store July 4, 1896.	Wheat.	Indian corn.	Oats.	Barley.	Rye.

Some interesting information about the relations between the government and industry in New Zealand was given in a lecture recently delivered at Toynbee Hall, in London, by Mr. W. P. Reeves, the agent-general for the colony. He said that the eight-hour day was not universal in New Zealand, though it was customary. The experiments in labor matters, which formed the subject of his address, might be roughly defined as endeavors on the part of those who governed the country to use the collective forces of the community to try and better the lot of the masses of the people. The state was not only a great landowner, but it owned nearly all the railways, and the telegraphs were their property without exception. The Factory act of 1894 brought into its meshes nearly every kind of workshop in the country. The hours of labor were forty-eight a week, and overtime for any one, man, woman or child, was to be paid for at a minimum of 6d. an hour. The Conspiracy Law Amendment act put trade unions with regard to the laws of conspiracy on exactly the same footing as any other organization of members of the community. Seamen had also been fully protected by legislation.

CURRENT BUSINESS NEWS.

Industrial.

During the past quarter seven new black-plate mills have been added to the producing capacity of the American tinplate works, "giving them at present a potential production of about 5,500,000 boxes annually. When the additional ten mills now under construction are completed this will be increased to about 5,800,000 boxes."

Southern iron quotations are somewhat lower, and a number of mills are stopping for the usual repairs made at this time of year, which will decrease the output. The Chattanooga *Tradesman* says: "The question of wages which also comes up at this season, has been amicably settled in most cases, and no strikes of any importance are reported or anticipated."

Pennsylvania turned out a total product of 104,375,366 pounds of finished tin and terne plate for the year ending December 31, 1895, with an aggregate value of $4,237,819.42, or an average value of $81.20 per net ton. "Add to the $1,161,424.58 paid out in wages by the ten tinplate works manufacturing black plate, the $188,224.32 paid out in wages by the seventeen dipping works, and the result is $1,349,648.90 paid out in Pennsylvania for labor in the manufacture of tinplate during 1895. That is to say, the 2,574 persons employed by the black-plate makers and the 557 persons employed by the dippers, in all 3,131 persons, working an average time of 241.6 days each, received per capita for skilled and unskilled labor $431.06, or an average of $1.79 per day."

Seventeen of Pennsylvania's tin-dipping works were in operation an average of 244 days in 1895, and employed 557 persons. The aggregate amount of wages paid to these 557 employees was $188,224.32, an average per capita of $337.92, or $1.38 for all persons employed. These seventeen plants turned out a finished product of 54,873,636 pounds, with value of $2,463,464.68, an average of $89.62 per net ton.

In round numbers Pennsylvania has one-third of the black-plate (tinplate) manufactories in the country, and over 50 per cent. of their entire capacity. "The Pennsylvania works represent some of the largest, best equipped and most successfully operated tin plants of any country."

The cold rolls and the tinning department of the American tinplate factory at Ellwood, Ill., have resumed operations to work up stock on hand, which will require two weeks. About 800 men went to work. The company has not yet signed the scale, but it is thought it will do so in a few days.

The mines of the Metropolitan Iron and Land Company, at Ironwood, Mich., have shut down, throwing 1,500 men out of work.

A Biddeford, Me., dispatch says a shutdown of the Pepperell No 3 mill and the broad looms in the Pepperell and Laconia mills, about 1,600 in all, has been ordered. This will throw about 1,900 employees out of work. But this is partially offset by an order for all narrow looms in both mills to be run on full time, giving employment to about half the present corps of operatives.

American machinery for Russia is to be supplied by several of the leading manufacturers of machine tools, as a result of the negotiations which are said to have been successfully carried out for the establishment of new locomotive works at Nijni-Novgorod by an American syndicate.

The *Metal Worker* says: "On July 1 there were 36 black-plate plants in the United States in actual operation or ready to operate. Of these all but 5 are coating their own product, or at least a portion of it. They possess among them 179 hot mills complete and ready for work, with one building. Three black-plate plants, with a total of 9 mills, are in course of construction, making an aggregate of 39 black-plate plants and 189 mills either finished or building. In addition, there are 31 works which purchase their black plate and dip and finish it for the market. These works possess an aggregate of 169 tinning sets. This gives a grand total of 70 concerns engaged or preparing to engage in the tinplate industry in the United States. The large majority of these works were running on full capacity up to the close of last month, but almost all were shut down on July 1 pending the settlement of the wage scale."

Orange groves along the Indian river in Florida are said by the New York *Fruitman's Guide* to "have come out wonderfully, and many which it was feared were killed outright are now loaded with young fruit." After the freeze "many of the growers cut their injured trees down to the ground, and thus saved hundreds that are now sending up fresh shoots." The *Guide* says that the orange industry of Florida is by no means "paralyzed," only temporarily benumbed, and adds that "the oldest, most experienced growers, say that within three years it will be where it was three years ago."

The Minneapolis *Northwestern Miller* says: "The Minneapolis flour output in June—986,000 barrels—was the heaviest ever made in that month, June, 1892, coming next with 884,955 barrels. The direct exports of the mills were also very heavy, there being 239,000 barrels shipped abroad in two weeks. The total for the month will approximate 440,000 barrels. The attached table gives the flour output at Minneapolis on four crop years:

	Barrels			
	1895-96.	1894-95.	1893-94.	1892-93.
September	1,050,630	927,370	922,925	872,105
October	1,262,595	1,063,640	966,085	973,635
November	1,242,860	1,117,260	946,390	865,595
December	1,158,595	452,000	644,965	741,010
January	1,108,060	393,180	543,090	749,660

April	985,875	770,130	787,510	681,300
May	798,870	979,010	849,655	730,655
June	986,000	760,550	864,075	711,425
Totals	10,424,325	7,781,150	7,811,655	7,762,840
July	.....	718,520	543,685	739,415
August	.....	928,555	965,290	847,360
Year	.....	9,428,225	9,320,630	9,349,615

The greatest curtailment in the history of the textile industry of New England is now taking place, about 5,000,000 spindles in the cotton-goods industry alone. Mill men say that this action is necessary, as they are carrying large stocks due to overproduction, which cannot be disposed of except at ruinous prices.

Commercial.

A recent official report says: "A careful study of the prices of tinplate prevailing before and after the passage of the McKinley act, will show that in September, 1890, tinplate, 10.14x20, was selling in New York at $5.17 per box, and that in July, 1891, when the McKinley bill went into effect, providing a duty of 2 2/10c. per pound, it was only bringing $5.28 per box, or 11c. more than it was ten months before the McKinley bill went into effect. The highest price it reached at any time under the McKinley law was $5.50 per box, and generally it was lower. In October, 1894, it was selling as low as $4.09; in December, 1894, at $4; in December, 1895, at $3.82 and in January, 1896, at $3.80."

Chicago *Hardwood* says: "It is said that over 65,000,000 feet of pine logs will be rafted to Michigan mills from the single Canadian port of Spanish River, on Georgian bay. It is also said that Chicago parties are looking over the Georgian bay region with a view to getting control of large tracts of hardwood timber situated there. The timber is red oak, birch, hard maple and some basswood, elm and ash. Buffalo is already getting considerable hardwood lumber from Georgian bay."

The harbormaster at Tacoma makes the following report concerning the ocean commerce of that port for June, 1896: Imports included a cargo from China and Japan valued at $249,536, which, together with $1,183,878 previously reported, make total imports for six months $1,433,414, compared with $2,782,209 during the like period in 1895. Exports included 52,476 bushels of wheat to Africa, valued at $49,065; 24,926 barrels of flour to Japan and China, valued at $79,025; 4,850,000 feet of lumber to Australia, Africa and California, valued at $45,655; 30,360 tons of coal to San Francisco, valued at $91,395; miscellaneous merchandise to China and Japan, valued at $209,490, and miscellaneous merchandise to British Columbia, valued at $23,182, a total of $497,812 for June. This, together with $2,679,205 reported for five months previous, makes a total of $3,177,017 for the past six months, compared with $2,307,609 during the like period in 1895.

The *Western Tobacco Journal* says: "The year 1895–96, with a population of probably 5,000,000 more than 1890–91, shows an aggregate consumption of tobacco of but 17,000,000 pounds more than in 1890–91. This illustrates the effects of the 'hard times,' for in previous decades the per capita consumption increased perceptibly, until in 1891–92 it was 5¼ pounds. In 1895–96 it has been about 5 pounds."

Financial.

The following securities were sold at auction this week at New York:

125 Shares Waterbury & Marshall Co. preferred, $100 each	1
$27 22 Waterbury & Marshall Co. stock scrip	$1 lot
$600 City of Humboldt, Allen County, Kan., 6 per cent.	90
20 Shares New York Biscuit Co.	91½
$1,030 Equitable Securities Co. debenture bonds, series B.	68½
1,450 Shares Montana Coal & Iron Co.	$600 lot
25 Shares Bank of the Republic	148½
10 Shares National Park Bank	261½
300 Shares Staten Island Railway Co.	$40 per share
$10,600 City Railway Improvement Co. 6 per cent	$2,700 lot

The New York State Bankers' Association will hold its annual convention at Niagara Falls, July 17 and 18. A president to succeed James G. Cannon will be selected, as single terms are the rule in this association. Addresses will be made by S. G. Nelson, Seymour Dexter, ex-Senator Griswold, George B. Sloan and others, the topics being all of timely interest to bankers.

Messrs. John H. Davis & Co., New York, say: "Pass a law that a bushel of wheat shall always be the equivalent of $1 in gold. Then let the production of wheat increase 480 per cent., or to, say, 2,500,000,000 bushels. Would there be in any wheat market of the world buyers crazy enough to purchase it at the arbitrary legal valuation? If not in wheat, why in silver?"

The New York correspondent of the Philadelphia *Ledger* writes: "One effect of the silver agitation and the uncertainty as to the money of the future is seen in the increase of gold mortgages in real-estate transactions. A loan of $600,000, full secured, on down-town property, was recorded last week in favor of a life-insurance company, and when it is paid payment must be made in gold."

The loss by fire in this country and Canada in June was $3,500,000 less than in June last year and $2,500,000 below that in June, 1894. For the first half of this year the losses were less than in the same period of 1895 to the extent of $2,400,000, but they are nearly the same amount greater than in 1894.

Frederick B. Schenck, cashier of the Mercantile National Bank, New York, has been elected president to succeed William P. St. John. Frank Tilford, of Park & Tilford, has been elected president of the Bank of New Amsterdam, New York, to succeed the late George H. Wyckoff.

It is properly pointed out that "as a matter of fact silver is behind seven other mineral products of the United States in value. We produced in 1895 soft coal to the value of about $116,000,000, pig iron $105,000,000, anthracite coal $82,000,000, petroleum $57,000,000, gold $47,000,000, copper $38,000,000, and building stone $34,000,000, while the real value of the silver produced was $31,000,000. The value of the silver output was but one-eighteenth of the total mineral production."

Railroads.

The following gross and net railway earnings are reported for May:

	Gross earnings		Net earnings	
	1896.	1895.	1896.	1895.
Alabama Gt. South'n	$111,214	$110,464	$10,878	$17,055
Allegheny Valley	198,717	216,601	74,737	94,227

The Central Railroad Company of New Jersey has declared a quarterly dividend of 1¼ per cent., payable August 1.

The St. Louis & San Francisco Railway, which has just been reorganized, will join the Western Freight Association.

The Toledo, Peoria & Western Railroad reports for the year ending December 31, 1895, as follows:

	1895.	1894.	Changes.
Gross earnings	$991,268	$893,621	Inc. $97,647
Net earnings	182,594	151,678	Inc. 30,916
Deficit	24,741	62,554	Dec. 37,813

The Maryland Coal Company has declared a semi-annual dividend of 1½ per cent., payable July 15.

The all-rail east-bound shipments of dead freight from Chicago last week were 46,605 tons, against 56,782 tons the previous week, and 58,971 tons the corresponding week of the previous year.

Miscellaneous.

The forty-fifth meeting of the American Association for the Advancement of Science will be held in Buffalo, N. Y., August 22 to 29.

The Minneapolis *Lumberman* says: "A relic of the Alaska purchase is found out on Puget sound in the shape of one of the two Russian gunboats included in the original purchase from Russia of the territory of Alaska. It is now used as a tugboat by the Port Blakely Mill company, and it goes by the euphonious name of Politkofsky. What is more interesting is the fact that the boat was built of Alaska cedar and is now apparently as solid and substantial as it was when built thirty years ago."

Foreign.

The London *Bankers' Magazine* says: "The value of public securities continues to steadily advance. Last month we had to record an increase in the value of our representative securities of £27,000,000, and for the present month a still further appreciation of over £30,000,000 is shown, the figures comparing as follows:

Aggregate value of 325 securities on May 21, '96	£3,249,137,000
Aggregate value of 325 securities on June 20, '96	3,279,507,000
Increase	£30,370,000

A new rail route between Quebec, St. John, N. B., and Halifax, N. S., was opened for passenger service June 22. This places these three cities in close connection, and the line which is composed of the Quebec Central from Quebec to Megantic, Canadian Pacific across the state of Maine and through to St. John, N. B., and thence by the Intercolonial to Halifax, "passes through a new and important section of the country."

The Russians have decided to build a railway, not only from Merv into the Kushk Valley, but also a branch line from Charjui along the southern bank of the Oxus to Karki. As regards the Samarcand-Tashkend Railway, which is an extension of the Transcaspian main line through Central Asia, it is reported that the earthwork is practically finished, and that a train service will be opened this summer.

The returns issued by the British Board of Trade for June show an increase in imports of £1,330,000 and an increase in exports of £2,730,000 during that month, as compared with June last year.

The report on Indian railways for 1895 shows a great record of progress. Over 800 miles were opened for traffic, while nearly 3,800 miles were under construction or sanctioned. The number of passengers carried increased in round numbers by 7,333,000 and the goods traffic by 20,000,000 tons. The net earnings rose 59 lakhs, the total exceeding 14 crores, 11 lakhs. The return on capital was 5.78 per cent.

Mr. W. W. Astor is said to have offered £2,000,000 for the English news-stand and circulating library business of W. H. Smith & Son.

It is announced that *L'Industrie*, of Brussels, is going to hold a horseless carriage competition on the same lines as those of the *Engineer*, "but better."

The editor of the London daily *Financial News* makes himself responsible for the following: "Our American cousins have found another excuse for the depression in business. The scapegoat this time is not the 'dollar of the fathers,' but the bicycle of the sons and daughters. A business man writes seriously to a friend in this country to say that so much money is being used to pay for bicycles that there is not enough left for other purposes. * * * Do bicycle agents and makers in the States hoard all the money they receive, instead of banking it? Do they need to pay out nothing for materials or wages, or even for their own livelihood? It seems impossible to get anything like a sensible utterance about money from the United States."

An English technical journal says of the British locomotive industry: "Turning now to the export trade in locomotives, the past month has been an exceedingly satisfactory one, seeing that not only is the total the largest for the past six months, but it shows a large increase over the same month of the past three years. The respective figures are: May, 1896, £100,963; April, 1896, £67,006, and May, 1895, £58,373. It has again to be recorded that not a single British-made locomotive has found its way to Russia; what orders Russia now gives out to foreign builders are generally secured by Germany or America, both these countries having at present orders in hand for locomotives for Russian railways."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Married Woman—Louisiana Law.

The Supreme Court of Louisiana held, in the recent case of Pascal et al. vs. Folse et als., that after a decree of separation of property, if the husband disposes of and converts to his own use the separate property of the wife, she has a legal mortgage against the property of the husband for reimbursement, and that where authority has been given to the wife to borrow money by the judge, and she does so and it reaches its proper destination, she will be liable for the amount, notwithstanding no note or mortgage was given to secure the amount.

Insurable Interest—Mother-in-Law.

The Kentucky Court of Appeals held, in the recent case of Adams' Adm'r vs. Reed, that in order to give one an insurable interest in the life of another he must sustain toward that person such a relation as would justify a reasonable expectation of advantage or benefit from the continuance of his life, and hence of a corresponding loss in case of his death; that a mother-in-law had no insurable interest in the life of her son-in-law, although they lived together under a temporary arrangement, and that, therefore, an assignment by the son-in-law to the mother-in-law of a policy upon his life originally made payable to his wife, who had died, was void, and the assignee was entitled as against the administrator of the insured only to the amount she had paid in premiums, with interest thereon.

Railway—Accident—Fellow-Servant.

It appeared, in the case of Lundquist vs. Duluth Street Railway Company, recently decided by the Supreme Court of Minnesota, that the defendant, a street railway company, required by its rules that its employees in charge of its cars should give timely warning, by proper signal to its employees engaged in track repairing, of the approach of its cars. The plaintiff in reliance on such rules and while at work repairing the track of the defendant as its employee was struck and injured by a car, by the failure of the motorman to give such signals, and by his running the car at a rate of speed prohibited by law. The court held that the plaintiff and the motorman were fellow-servants, and that the defendant was not liable to the plaintiff for the injuries resulting from the negligence of the motorman.

Carrier—Shipment—Contract.

The Kentucky Court of Appeals held, in the recent case of The Ohio & Mississippi Railway Company vs. Tabor, that a provision in a contract with a common carrier for the shipment of cattle that the shipper should not have the right to recover for injury to the cattle unless he gave notice of his claim therefor before the cattle were unloaded was a limitation of the carrier's common law liability, and was void because prohibited by section 196 of the Kentucky constitution; that a provision in such a contract fixing the maximum value of the cattle per head, and limiting the recovery to that amount in the event of injury or loss, was also a limitation of the carrier's common law liability, and was void by section 196 of the constitution; that such contracts made in the state, being void there, were void everywhere, and that section 196 of the constitution was merely the exercise of the state's right to determine what should be a valid contract, and to control the remedy in its own courts, and was therefore not a regulation of interstate commerce.

Corporation—Mortgage—Lien—Creditor.

The Kentucky Court of Appeals held, in the recent case of The New Albany Woolen Mills, etc., vs. Lewis, that a mortgage or assignment made by an insolvent debtor for the purpose of preferring one or more of his creditors to the exclusion of others is not on that account fraudulent or void, but may be enforced for the exclusive benefit of the preferred creditors unless the excluded creditor commences action within six months after the act of preference, to have it declared to operate as an assignment under the statute, and that where a mortgage executed by a corporation upon a stock of goods provided that the mortgagor might sell or dispose of any part of the goods "in the usual course of trade and business, keeping an account of all such sales and transfers, and applying the proceeds thereof to the payment and satisfaction of the indebtedness hereby secured, and accounting to said parties of the second part, at any time and upon demand, for said proceeds of such sales," one who purchased a part of the mortgaged goods from the mortgagor after the execution of the mortgage was to be regarded as owing the price of the goods to the mortgagees, for whose benefit the sale was made, and therefore their claim to the money due by the purchaser was superior to the lien asserted by an attaching creditor of the mortgagor who has had the purchaser summoned to answer as garnishee.

Partnership—Open Account—Payment.

The Supreme Court of Georgia held, in the recent case of Norton vs. Paragon Oil Can Company, that where a partnership, composed of two persons, was indebted upon an open account, and on the day the partnership was dissolved one of the partners, with the knowledge and consent of the other, mailed his individual promissory note to the creditor for the purpose of settling the account, this, of itself, would not be a payment of the account unless the note was accepted as such by the creditor, and that a mere statement by the creditor in a letter acknowledging receipt of the note, to the effect that if the same should be paid at or before its maturity it would be accepted in payment of the account, and his retention of the note until after its maturity, he being ignorant of the dissolution of the partnership, would not extinguish the account; nor would its extinguishment result from the fact that the creditor, before the maturity of the note, discounted or otherwise used it, the note having been dishonored and the creditor having been compelled, after protest, to again take it up.

Sale—Note—Mortgage—Surety.

The Supreme Court of Georgia held, in the recent case of Wood vs. Evans, that where the purchaser of personalty took possession of the same, giving to the seller a promissory note for the price, which was signed by a third person as surety, upon a parol agreement between himself and the purchaser that the title to the property should be in the surety until the note was paid, one who sold and delivered goods to the purchaser upon the faith of the property being his, with an understanding that the debt thus created was to be secured by a mortgage upon the property, which was subsequently given, was entitled to enforce the collection of the mortgage by a sale of the property as against a claim filed by the surety, though the latter had been compelled to pay the original purchase-money note. The court said that this was true, although the mortgage was not actually given until after knowledge by the mortgagee of the contract between the mortgagor and the surety, the mortgagee having extended the credit, and having parted with his goods upon the understanding mentioned, before receiving such knowledge.

Employee—Accident—Indemnity.

In the case of Barg vs. Bonsfield et al., recently decided by the Supreme Court of Minnesota, it appeared that the plaintiff, a minor, was employed in defendants' establishment by one Scott, was injured by the latter's negligence, and brought action to recover damages for the injury, claiming that he was defendants' servant and Scott was their agent, while they denied this, and claimed that Scott was an independent contractor and plaintiff was in his employ. On the trial the court admitted evidence showing that defendants held an indemnity policy, indemnifying them and holding them harmless "to a certain extent" from liability "by reason of any injury to any employees, including this plaintiff or anybody else that might be in any part of the mill working in the factory;" that the company issuing the policy had undertaken to defend and were defending that action for defendants. Nothing further appeared as to the contents of the policy, and it did not appear that such insurer undertook by the policy to defend the defendants in all cases in which they might be charged with any such liability. The court held that the evidence was admissible, as tending to show that the defendants did not regard Scott as an independent contractor. The court applied in the case the rule that a youth of between fifteen and sixteen years of age is required to exercise the amount of discretion which a person of his age and experience should exercise and no more. It also held that whether plaintiff was guilty of contributory negligence was a question for the jury, as was the question whether or not his employer was guilty of negligence in failing to instruct such youth and warn him of the dangers of working around machinery with which he was not familiar. The court also applied the rule that where one who performs work for another represents the will of that other, not only as to the result, but also as to the means by which that result is accomplished, he is not an independent contractor, but the agent of that other, who is responsible for his acts and omissions within the scope of his authority.

BUSINESS NOTES.

Nicaragua Canal Outlook.

The *Engineering News* says: "The Nicaragua Canal report to the House of Representatives by the Committee on Interstate and Foreign Commerce states that the committee believes the canal entirely feasible, and strongly recommends that the government assist in the completion of the work even if it costs more than $150,000,000. The difference of opinion between the engineers for the government and for the company is thought to affect in no wise the practicability of the project. The committee believes that the main question now is, who shall build the canal and who shall control it when built. The committee feels justified in recommending that Congress should take immediate action to give such aid to the enterprise as may be necessary to obtain the funds which are requisite to complete the work."

British Assets.

The annual British parliamentary return showing the amount of stock held by the various English government departments gives some idea of the extent to which government operations in the market are responsible for the extremely high prices to which British funds have attained. "In the first place, the government has to buy large amounts of stock on account of savings banks deposits and on account of various other departments, and in the next place is constantly reducing the quantity of available stock by purchases and cancellation on account of the sinking fund. The purchases on account of government departments alone have reached nearly £18,000,000 in the year, the amounts held at the end of March, 1896, and March, 1895, being stated as follows:

	End of March— 1886.	1895.	Increase or decrease.
Inscribed at the Bank of England	£164,508,723	£146,494,328	+£18,014,395
Inscribed at the Bank of Ireland	6,768,161	6,858,115	—89,594
	£171,276,884	£153,352,443	+£17,924,441

The above sums are the aggregate of the various stocks held, exclusive of exchequer and Treasury bills and the capital value of annuities."

European Sugar Bounties.

The raising of the sugar bounties in Austria and Germany is naturally producing the effect that was to be expected in France, where the deputies of the sugar-producing departments are clamoring for more protection against the new Austro-German legislation, which threatens to deprive French growers of the English market. According to the Paris correspondent of the *Economist*, a demand has been submitted to M. Méline for a direct export bounty of 35 francs per ton on raw and 45 francs on refined sugar, in addition to the indirect bounty already obtained. It is also proposed to interdict the refining of foreign colonial sugar under bond for reëxport, and to charge on it the same duty as that levied on foreign European sugar, at the same time increasing this duty from 70 francs to 105 francs per ton. These proposals are now being considered by M. Méline, and, if accepted, will give such a stimulus to beet growing in France that sugar must inevitably decline still further in price notwithstanding the shortage in Cuba. How foreign governments can regard the prospect with equanimity we do not know; but we can, at least, be grateful to them for letting us have our sugar cheap at their expense."

"Dishorning" Cattle.

The London *Times* says: "The practice of dishorning cattle as practiced in the western states of America is defended by the British vice-consul at Kansas in the course of a very elaborate report on the trade and industries of that state. He says that the practice is becoming popular in the western states, and that it has many advantages which can only be appreciated by persons in the trade. It is unwise to dishorn old cattle, for it takes them some time to regain their strength. The proper time for dishorning is when the calf is a few weeks old, and then the budding horn is nipped with an instrument made for the purpose. The operation is not very painful, the wound heals in a few days, and the work is then over, for the horns never grow. As a result of the process it is said that the animals are more contented, gentle and docile. If pens containing horned and dishorned cattle separately are visited and compared, the difference is seen at once, and the advantages of dishorning are made apparent. The dishorned cattle stand perfectly still and contented, while those with horns are restless and prodding each other with their horns. It costs a little less to fatten dishorned cattle, and two more can be put into each cattle truck, thus saving carriage, for cattle pay by the truckload and not by weight. Dishorned cattle fetch more than horned when sold, for the weight of the horns has not to be deducted, and when killed the hides are not scored and cut by the cattle fighting with each other. The vice-consul considers it a humane act to dishorn; it is, he says, surprising to see the number of cattle unloaded with broken horns and other injury caused by the horns. In transit in crowded trucks, if a horned animal falls it is almost impossible to get it up again, while a dishorned one is easily assisted to its feet."

Transporting Perishable Food.

The New York *Sun* says: "In no more emphatic manner are modern facilities of transportation emphasized than in the safety with which perishable food is conveyed from a great distance. In this particular Australia, South America and the United States are no further removed from Europe than a single province formerly was from the capital of the country of which it formed a part. Algeria is now supplying Paris markets with camel meat. An extensive plant has been created in that French colony for the killing and refrigerating of those animals, and daily shipments are made to Paris. The meat of the camel is described as not unlike beef, with the tenderness of veal. The hump is the choicest portion. Eggs that formerly were gathered near the localities where they were sold now come from distant points. Four million daily are received in London from foreign countries. Most of them come from Russia. They command in England twice the price they bring in the home market. The export of eggs from Russia, that in 1885 amounted to 235,000,000, increased in 1895 to 1,250,000,000. These are official figures. The larger proportion of this product goes to England. In addition, great quantities of dressed fowl are annually exported from Russia to all European countries."

Great Britain and Brazil.

A correspondent of the London *Times* sends the following translation of the passage which related to the island of Trinidad in the message of the President of Brazil at the opening of Congress on May 14: "As regards the occupation of the island of Trinidad, which took place under the ministry of Lord Rosebery, the present English cabinet considered that it could not undo this act, and it instructed the British representative in Brazil to propose arbitration as a solution of the question. Seeing, however, that this representative as soon as the occupation was known had proposed the leasing of the island, and later on had made an endeavor to obtain from the Brazilian government a declaration that, when once the island had been given up, there would be no doubt (provided fiscal rights and obligations resulting from contracts were protected) about the government's consent being given to its use for a telegraphic service—actions which amounted to an acknowledgment of the sovereign rights of Brazil—the proposal of arbitration which contradicted this acknowledgment could not be accepted. The Brazilian government set forth at length on January 7 last its reasons for rejecting the proposal, having, however, well-founded motives for supposing that this incident in the relations between Brazil and England will be settled in a worthy manner."

July Interest and Dividend Payments.

The *Stockholder* says: "Interest becomes due and is payable to-day on bonds having a par value of $2,534,301,564, the amount of such interest reaching $51,822,883, as compared with $50,474,192 last year, $50,268,453 in 1894 and $60,521,410 in 1893. Dividends become due or are payable during the month on stocks having a par value of $917,985,551, the amount of such interest aggregating $20,648,183, as compared with $19,902,816 last year and $19,884,376 in 1894. The total disbursements are, therefore, $72,471,066, as compared with $70,376,908 last year, $70,152,829 in 1894 and $78,905,433 in 1893. A comparison of the five years' disbursements will here be of interest:

	1892.	1893.	1894.
Bonds	$2,342,391,203	$2,845,593,659	$2,444,646,810
Interest	60,247,358	60,521,410	50,268,453
Stocks	825,660,947	836,800,021	869,634,332
Dividends	17,989,625	18,384,023	19,884,376
Total disbursem'ts	$78,206,983	$78,905,433	$70,152,829

	1895.	1896.
Bonds	$2,452,930,560	$2,534,301,564
Interest	50,474,192	51,822,883
Stocks	886,014,251	917,985,551
Dividends	19,902,816	20,648,183
Total disbursements	$70,376,908	$72,471,066

Interest is likewise due on United States government bonds of the par value of $529,636,600. This amount, combined with the various bank, insurance and industrial disbursements, will bring the grand total up to nearly $90,000,000."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The usual midsummer dullness in general merchandise markets has been emphasized by unfavorable weather, by uneasiness at the attitude of the Chicago platform towards the finances of the country, and by the continued conservatism with which merchants continue to supply their wants. The volume of business appears smaller than last week. Mercantile collections are more unsatisfactory, and there is a disposition among jobbers to look more closely after credits. Wool is still further depressed, with not enough business to establish quotations. There is no improvement in the demand for fall business in woolens. Iron and steel industries report a reduced demand, even after the greatly restricted output, with prices practically unchanged and little prospect for a revival for some time. A portion of the recent activity among shoe manufacturers still continues, but the tendency is to fall off. Notwithstanding rains in Texas, the cotton crop there is suffering from the effects of drouth, while in South Carolina too much rain has fallen for the good of the crops. Pittsburgh, St. Paul and Savannah all report a smaller volume of business, and complaints are heard as to the prospect of the wheat crop on the Pacific coast.

Stock values at New York have recovered somewhat from last week's depression, and the market is dull and steady in the face of the Chicago free-silver declaration and the entire absence of public interest. Professional speculators are influenced somewhat by the fact that the market discounted the outcome at Chicago in advance, and by the creation of a fairly large short interest. Americans have been strong in London, but the buying from that quarter has been on a smaller scale than last week. Large professionals and capitalists are disposed to wait, and dealings in investment bonds have been very small. Foreign exchange is firmer on the check in the supply of security bills, demand sterling rising from 4.87¾ to 4.88@4.88¼. Silver is only fractionally higher on the result at Chicago.

Bank clearings throughout the United States aggregate only $985,000,000, a falling off from last week of nearly 11 per cent., and a decrease from the corresponding week in July, 1895, of 14 per cent. When contrasted with the like period in 1894 (when the volume of business was extremely depressed), this week's total is 11 per cent. larger, but when compared with the total for the corresponding week in 1893, the falling off is 1.4 per cent., and with the like period in 1892, the decrease is 13 per cent.

Among two dozen staple articles, prices of which form a gauge of the general tendency of values, only one, print cloths, shows an advance over last week, coffee, petroleum, iron, steel, coal and lumber being conspicuous among those prices for which are unchanged. The general tendency of the price movement, therefore, is downward, the advance in prints being the result of the shutdown at the east.

More encouraging trade features include the opening of new prints for fall delivery and the preparation for the road of travelers, more particularly among dry goods jobbers. Lake freight rates are lower and shipments heavier. Rains have helped Georgia farmers, and at Philadelphia the recent brisk demand for boots and shoes continues. Jobbers at Augusta, Ga., report some improvement over May and June, and at Minneapolis merchandise is moving more freely, with fairly satisfactory orders. At St. Louis there have been more orders received for hardware, dry goods and shoes than anticipated. At Chicago increases in trade have been very slight, but at Omaha gains are noted in the movement of dry goods, shoes and groceries. Relatively the most favorable advices come from Baltimore, whose dry goods jobbers report salesmen receiving encouraging orders, and whose dealers in clothing and shoes regard the past three weeks' business as pointing to a better fall trade than in 1895. The total number of business failures throughout the United States is 219 this week, a smaller number than in the corresponding period in each of three preceding years. The falling off from last week is 10, from the week a year ago it is 47, from the week two years ago 10, and from the like week in 1893 the decrease is 179.

Gross railroad earnings for June are favorable, showing the largest gain over last year reported since February, and a proportion of gain almost three times that reported in May. The total June earnings of 113 companies aggregate $35,586,000, a gain for last year of 7.1 per cent. This follows a gain in June a year ago over June, 1894, of 8 per cent. The granger and Pacific roads show heaviest relative gains, and the southwestern and one eastern road are the only groups that report a decrease. For six months the total earnings are $222,542,270, a gain over a year ago of 7.1 per cent.

Exports of wheat (flour included as wheat) from both coasts of the United States and Montreal this week aggregate 2,167,000 bushels, against 2,601,000 bushels last week, 2,317,000 bushels in the week a year ago, about the same quantity in the corresponding week of 1894, and as compared with 4,134,000 bushels in the like week of 1893.

Advices from Toronto are that the feeling in general trade circles has improved slightly. Ontario crop prospects point to an average of recent years. At Montreal business continues of a hand-to-mouth character, and some orders for fall delivery have been canceled. Few merchants there look for a general improvement in trade this season. The total number of business failures reported from Canadian Dominion is 33 this week, against 25 last week, 30 in the week one year ago, and 34 two years ago. Bank clearings at Winnipeg, Montreal, Toronto, Hamilton and Halifax show some expansion as compared with a week ago, when the week was broken by a general election, $24,136,000, as contrasted with $13,964,000. In the like week one year ago, however, the corresponding aggregate was $25,076,000, about 4 per cent. more than this week.

FINANCIAL.

The Money Market.

Nothing has occurred to disturb the serenity of the New York loan market, though lenders in some cases are disposed to think that the coming national canvass and the agitation of the currency question that will accompany it justify caution in making long-time arrangements. Some borrowers, it is also said, are inclined to negotiate loans running well over the November election. Instances of such tendencies in either case are rare, and the supply of time money is ample, while inquiry is on a limited scale and rates are quoted at 3@3½ per cent. for 30 to 90 days, and 3½@4 per cent. for 4 to 6 months. Commercial paper is in light demand and limited supply, best names and endorsed bills receivable being 4½@5 per cent. Out of town buyers are not as plentiful or eager as was recently the case. Call money has been 1½@2½ per cent.

Discount Rates and Exchange on New York.

The New York Banks.

The principal changes in the bank averages for the five days ending July 3 were given in last week's issue of BRADSTREET'S. The full text of the bank statement for the period in question is now printed below. The salient feature was the decrease of cash holdings, indicating smaller receipts of money from the interior, the effect of which was supplemented by withdrawals of gold for Canada and Germany. The item of loans shows an increase of $1,200,000, and the deposits increased $2,000,000, the effect of the other changes being to reduce the surplus reserve by $1,600,000. The figures of the statement compare as follows with those of the preceding week:

	June 27, '96.	July 3, '96.	Changes.	
Loans	$474,993,300	$476,199,300	Inc.	$1,200,000
Specie	62,015,300	61,866,300	Dec.	149,000
Legal tenders	84,145,700	83,223,700	Dec.	922,000
Deposits	496,974,700	499,046,900	Inc.	2,072,200
Circulation	14,584,900	14,556,900	Dec.	28,000
Total reserve	146,161,000	145,090,000	Dec.	1,071,000
Reserve required	124,243,675	124,761,725	Dec.	518,050
Surplus reserve	21,917,325	20,328,275	Dec.	1,589,050

At the corresponding date last year the surplus reserve was $32,173,700, against $72,134 725 in the corresponding week of 1894.

The Boston Banks.

	July 3, '96.	June 27, '96.	Changes.	
Loans	$162,342,000	$161,383,000	Inc.	$959,000
Circulation	9,894,000	9,863,000	Inc.	31,000
Deposits	104,634,000	97,532,000	Inc.	5,102,000
Due from reserve agts	19,794,000	18,900,000	Inc.	894,000
Legal tenders	6,140,000	6,509,000	Dec.	69,000
Specie	8,610,000	8,932,000	Dec.	322,000
Surplus reserve	1,026,143	1,831,657	Dec.	205,514

Silver.

The silver market has been dull and firm. The action of the Chicago convention in regard to the monetary position of silver has failed to create any speculative movement in it. Dealings in silver bullion certificates on the New York Stock Exchange were only to the extent of 112,000 ounces at 69¼@69c. The London market for bars has been steady at 31½d. per ounce, and the commercial quotations for silver here were firm at 68⅞@69½c. at the close of the week, when 69@69¾c. was quoted.

Foreign Exchange.

The exchange market has been dull and lifeless for the greater part of the week. Inquiry was restricted, though in the last few days a demand for bills appeared from the sugar trade. The supply of commercial drafts was small, but their place was taken at the beginning of the week by offerings on the part of stock-arbitrage houses against purchases of speculative securities here for foreign account. The decreased interest shown by London in our stock market was, indeed, responsible for the hardening of exchange demand. Sterling, which had been drawn at 4.87¾ on Monday and Tuesday, was 4.88 on Thursday and Friday. Posted rates were reduced ½c. to 4.87½@4.88½ on Monday, and remained at that level all week. Foreign bankers were generally of the opinion that while rates might

harden a little the narrow state of the market, and the ease with which offering produced concessions, indicated that gold exports are virtually unprofitable, though $500,000 will be shipped to Germany to-morrow.

* Holiday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¼ @ 4.88½; commercial bills, 4.86½; francs, 5.16⅞ @ 5.15 1/16; reichsmarks, 95¼ @ 95¾.

The Bank of England discount rate remains unchanged at 2 per cent. The bank this week lost £592,000 gold, and its proportion of reserve is 58.56 per cent., against 54.41 per cent. last week. In the London open market discount is ½ @ ⅝ per cent., and call money ¼ @ ½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending July 3, 1896:

	1896.	1895.
Dry goods	$1,683,322	$2,283,453
General merchandise	6,502,866	5,239,284
Totals for the week	$8,186,188	$7,522,737
Previously reported	244,818,951	260,233,348
Since January 1	$253,005,139	$267,756,085

The exports (exclusive of specie) from New York to foreign ports for the week ending July 7 were $620,386 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,369,063	$4,899,937
Previously reported	194,037,837	174,926,122
Since January 1	$201,406,900	$179,826,059

THE STOCK MARKETS.

The New York Stock Market.

A disposition to recover from the depression of the preceding week asserted itself in the New York stock market when it reassembled on Monday last after the national holiday, though later in the week the tone became less steady and prices were affected by renewed declines, the close on Friday being again somewhat firmer. The attacks of the bear operators upon prices were for a time apparently suspended, and the appearance of the market justified the conclusion not only that the liquidation due to bear manipulation had exhausted itself, but that in a number of the active stocks the selling had been out of proportion to the supply of floating shares. This was demonstrated by the extent and activity of the borrowing demand from operators on the short side. It would also seem that London's recent purchasing operations here, although they originated mainly with professional traders in that market, had absorbed a very considerable amount of international stocks, the transfer books of various companies showing that upwards of 50,000 shares had been split up into certificates of the denominations current in London, and had presumably been shipped to the other side. London, however, has been much less active in our market during the present week. Some disposition was shown by its representatives here to renew their purchases when the market exhibited any symptoms of weakening, but on the whole the two markets were much more closely upon a parity, and the opportunity for arbitrage dealings between them was correspondingly lessened. It would also seem that the proceedings of the Chicago convention and the adoption of a radical platform by that body, in relation not only to the currency but other grave financial and political questions, had an effect upon the market for Americans in Europe. In Wall street itself the influence of the outcome at Chicago was somewhat less disturbing than might have been expected from the place which the mere anticipation of them held in the preceding decline. The prevalent impression, indeed, has been that the stock market had by its action more or less discounted the speculative influences of the Democratic convention, and that the indisposition of large operators to take any active part for the moment was due to a desire to await the actual developments and to note their reception by the country. In the latter part of the week the market, as already stated, showed some weakness, and prices lost for a time their steady tone under the pressure of renewed liquidation by small operators, who had bought for a turn on the long side, as well as by holders who were influenced by the radical character of the Chicago platform. A noticeable feature of the situation has been the inactivity of the investment market. Large corporations, as a rule, are entirely out of the bond market for the present, and speculative railway share issues have displayed a weak tendency. There is, however, a demand for prime investments, offerings of which are absorbed by dealers at concessions upon recent quotations for this class of securities. The weakness of the exchange market and the absence of gold shipments is favorably regarded, but had little or no speculative effect, and the same thing may be said of the crop prospects at the west, reports as to the situation in that respect being of a sufficiently encouraging character to have created under ordinary circumstances more or less bullish feeling. The actual trading in the market during the present week has been on a restricted scale, and is confined mainly to small professional interests. There was no specially important features beyond the fact that the international stocks and securities like Sugar, which had previously been objects of attention from the bears, exhibited the greatest disposition to rally in the early part of the week when the selling pressure was relaxed.

Boston Stock Market.

[Special to BRADSTREET'S.]

The past week has shown a more quiet tone in all departments of the market, although general prices show a fair amount of steadiness. Chicago, Burlington & Quincy has declined 1 point, and New York, New Haven & Hartford Railroad 2 points, but other railroads show a slight advance. Mining stocks have been more quiet, but prices hold up well. Sugar has attracted fair attention, and closed 1½ points lower. Bay State Gas has been quiet, with leather stock attracting no attention.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending			
	Price July 9, 1896.	Price July 2, 1896.	Sales July 9, 1896.	Sales July 2, 1896.

TRADE AT LOW TIDE.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, July 10.—Business continues slow in all kinds of merchandise, with operations still conducted in a hand-to-mouth way. The money market has lost all life. There is little demand for new loans, but holders are steady in their views. A little paper is moving at 4½ @ 5½ per cent., but choicest collateral loans are made at 4½ per cent. at four months, with year quoted at 4¼ @ 4½ per cent. Call money ranges at 3½ @ 4½ per cent. The boot and shoe market is quiet, but the tone is steady. Manufacturers of ladies' goods have prepared spring samples, and will soon start travelling men on the road. Men's-wear goods are still being ordered for fall. The factories are quite busy.

Providence, July 10.—There is no improvement in business. Curtailment in cotton manufacturing is not universal, although practically in force by some of the leading manufacturers. There is a disposition among merchants to act conservatively and scan credits closely.

Philadelphia, July 10.—Wool is flat. Dry goods are very dull; retailers find it difficult to push goods even after great concessions are made. The usual summer dullness has been made somewhat more so on account of continued rainy weather. Boots and shoes continue in brisk demand.

Pittsburgh, July 10.—The volume of business is not as large, but at this season a general falling off is looked for. Business during the past three months, while not as large or as profitable as in some past years, all things being considered, has been fairly satisfactory. The iron market remains unchanged; business is still dull, and prices are unchanged. The trade express the opinion that no revival will be noted for some time to come.

Buffalo, July 10.—The annual gathering of the National Educational Association has brought to this city a large number of people and Buffalo has presented a gala-day appearance for the past week There is no perceptible change in general business, the universal report being that it is exceedingly dull. Much unrest is manifested on account of the stand taken at the Chicago convention.

Baltimore, July 10.—Dry goods merchants report they have their salesmen out on the road, and the fall orders are coming in encouragingly. Clothing and boot and shoe houses have had their salesmen out for several weeks, and they consider the outlook for the fall as good as last year and better than it has been for several years previous.

West and Northwest.

Cleveland, July 10.—The commercial situation continues dull, with no material change looked for until after midsummer months. Iron and steel markets quiet and unchanged, and lake freights are extremely low. Country collections are not satisfactory.

Cincinnati, July 10.—Trade is sluggish.

Chicago, July 10.—Improvement in trade is not looked for, as a rule, at this season, but in a few instances it is reported, but so slight that it is hardly worth noticing. The sales of dry goods have held their own and are fair for the season. Clothing and shoes are slow, but traveling men are having fair success on the road with fall orders. In light hardware and bar iron there has been a liberal trade with a small increase in sales, but in other lines dullness prevails. Steel manufacturers report a falling off in the number of inquiries and there are not enough orders being booked to cut any figure. Leather and hides are steady with little moving. Building materials are slow, with the white pine trade demoralized and buyers naming prices. Produce is slow without any special change in prices. Wool receipts, 3,151,739 pounds.

Detroit, July 10.—The movement of merchandise in all lines is very light. Collections show no improvement.

Louisville, July 10.—Trade is featureless, and, on the whole, very quiet. Collections are slow, and there is very little disposition to save discount. Sales in leaf tobacco are about as usual, and prices are practically unchanged.

St. Louis, July 10.—Jobbers of dry goods, shoes and hardware say business for the month thus far shows a slight improvement, but the volume of general trade is below the usual summer proportions and collections are complained of. A careful inquiry among jobbers and manufacturers reveals the fact that purchasers are more than ordinarily conservative. The iron and steel market is unchanged, production being materially decreased by the shutdown of mills. Quite a number of factories have closed for midsummer stock-taking and are in no special hurry to recommence. Leather is quiet, but firm. Lumber is less active than last week, and receipts and shipments are materially less than at same period of last year.

Kansas City, July 10.—Business is quiet, both jobbers and retailers. Collections are fair.

Milwaukee, July 10.—The volume of business continues moderately fair and the general trade situation remains unchanged. Collections are slow.

Des Moines, July 10.—Business, both jobbing and retail, is very quiet. Collections are hard, and much uneasiness is felt over political matters.

St. Paul, July 10.—The noticeable falling off in trade during the past week is traceable largely to salesmen being off the road for the fourth and changing samples for fall goods, but the regular midsummer dull season is upon us, and were it not for staples and orders for goods to be shipped later there would be little doing. Collections, on the whole, are only fair.

Minneapolis, July 10.—Merchandise in staple lines is moving with some freedom, while advance orders for fall goods in nearly all lines are satisfactory in volume.

Duluth, July 10.—General trade continues fairly satisfactory, with local collections rather slow. Grain receipts are large in comparison with the same period of 1895. Lake rates are lower than last week. Shipments heavy.

Omaha, July 10—There has been some improvement in the demand for dry goods and boots and shoes. A brisk demand for groceries. Other lines are neglected. Collections are very dull.

Southern Cities.

Charleston, July 10.—Business in all lines is quiet. Heavy rains are falling too much, it is thought, for crops in the eastern portion of the state.

Savannah, July 10.—Trade has fallen off a little, and collections are not up to last week. Receipts of naval stores are about the same. Local firms are holding goods, and shipments are quite light. Market is firm with good demand.

Atlanta, July 10.—Trade is quiet and collections ordinary. A good rain has helped the farmers.

Augusta, July 10.—Wholesalers report some improvement over May and June trade. But little money is being made by retailers or jobbers. Collections are not satisfactory.

Jacksonville, July 10.—Business is quiet, though good for the season. Collections are better than last week.

Birmingham, July 10.—General trade shows up fairly well for the week, though there are no special features.

Chattanooga, July 10.—The week's business has been quiet.

Nashville, July 10.—Trade remains quiet, though a seasonable output of goods is reported. Collections from the country continue satisfactory, and local money is in ample supply. Trading in real estate is light.

Memphis, July 10.—General trade shows no change. Collections are fair.

New Orleans, July 10.—Business is tame in most lines. Cotton is fairly steady, but there is only limited trading. Sugar is dull, but there is more doing in rice at better prices. Money firmer. No payments on account of the sugar bounty decision have been received as yet.

Galveston, July 10.—Trade conditions continue unchanged. Showers in sections have given cotton some relief, but the crop generally is still suffering from drouth.

Pacific Coast.

San Francisco, July 10.—Commercial markets are quiet, though prices in general merchandise are steady. Fruits and produce are dull. The barley crop is threshing out well. Freights are unchanged except lumber, which is more active.

Portland, July 10.—The salmon pack on the Columbia river has not been very extensive during the last few days, but previous to that time it was large. What has already been canned, together with what will probably be caught during the July run, will swell the pack to fair proportions. There is some uneasiness about the safety of the wheat crop. Country trade and collections are reported better than city. The drug business is especially dull.

Tacoma, July 10.—The second tea cargo of the season arrived this week, and the vessel returns with full general cargo. A season of protracted heat threatens damage to crops. General business shows no changes of note.

Seattle, July 10.—Holiday trade has been good, much better than last year, and in some lines business has not fallen off as is customary. In some sections hot weather is reported to have shriveled wheat.

Canada.

Toronto, July 10.—Wholesale trade shows a little improvement, with a somewhat better feeling. The crop yield in Ontario will be about an average one of recent years, and the quality of the grain generally is remarkably fine.

Montreal, July 10.—No general improvement is noted. Buyers are giving orders only from hand-to-mouth. Some wholesale houses report several cancellations of fall orders. The general trade policy is to go slow. No improvement is expected this season. Several factories have closed temporarily. Orders are scarce and stocks heavy. Collections are fairly good.

Halifax, July 10.—The trade situation here is without special features. There is not much activity in general trade, and wholesalers complain of slow collections.

Dry Goods.

The volume of trade has ruled quiet, although in jobbing departments activity is shown in opening new fall goods in printed fabrics and getting traveling men ready for the road. The cotton goods situation is showing more steadiness owing to the action of many of the mills in closing down for a few weeks. Print cloths have hardened in price, but with general supplies stocked ahead, the demand is yet slow. A few weeks curtailment should help the market by preventing further accumulation, and helping a market for goods already made up. Fall prints in dark styles are opening well, and old stocks, as a rule, have been quite well cleaned out. Ginghams are slow. Dress woolens are in slow demand, and it looks as though the fall demand would be much curtailed. Men's-wear woolens are yet dull. Spring samples are ready to show, and should begin to attract attention very soon.

Wool.

The market is very much depressed, and the business doing is largely confined to sample lots, but few sales of fair-sized parcels of wool being noted. Values are not materially different, but are largely nominal, there being not enough business to establish quotations. The feature of the market is the firm tone in London, and the strong views held by operators at producing points in the interior. Manufacturers are not well supplied, but they will not buy wool until they are able to secure orders for woolens, hence the low prices prove to be no attraction. The supply of old wool that cost high held at the seaboard is large, and dealers are not disposed to show much speculative tendency as long as they have this on their hands. Australian wool is held firm, and sales rule small. Carpet wools are dull but steady.

SIXTEEN MILLION PUPILS.

The Washington *Post* says: "The total enrollment in educational institutions of all kinds in the United States for the school year 1893–94 was nearly 16,000,000, according to the report for that year just promulgated by Commissioner of Education Harris. Of these all but 400,000 were in the regular schools, an increase of about 500,000 for the year. The percentage of total population enrolled in the schools was 20.53. School property gained in value during the year over $26,000,000, and 1,103 more schoolhouses were in operation. Discussing educational growth in the cities, the report says:

"'Instead of ninety-nine drudges producing raw material and one person working to furnish and diffuse directive intelligence, it will come to pass in the distant future that one man will, by the aid of machinery, furnish the raw material, another man's labor will make the useful articles for food, clothing and shelter, ten more will elaborate articles of comfort and luxury, the rest, more than 80 per cent. of the community, will take up vocations having to do with protection and culture. With the growth of cities, therefore, there is a rapid increase of educational facilities. In the past twenty years the south has increased 54 per cent. in population, but its school attendance has increased 130 per cent., more than twice as fast as the population. In the twenty years from 1874 to 1894 the value of school property in the south increased from $16,000,000 to $56,000,000, an addition of $40,000,000, or $2,000,000 a year. Higher education has also made a good record.'

"The report includes Specialist McDonald's criminological investigations. The latter seeks to prove that there can be no rational treatment of crime until the causes are investigated. He estimates nine-tenths of crime to be due to bad social conditions. He attacks the theory that crime is a disease in a medical sense, claiming that 82 per cent. of criminals are in good health."

GUATEMALA EXHIBITION, 1897.

The London *Journal of the Society of Arts* says: "Information has been received from the Foreign Office through the Science and Art Department respecting a Central American Exhibition, to be held at the capital of the republic of Guatemala, from March 15 to July 15, 1897. All goods intended for exhibition will be allowed to enter duty free, but in the foreign section all goods, when disposed of, will have to pay the duty thereon and carry out the fiscal regulations of the country, except in cases where the article or articles sold have taken a prize, in which case they will be exempted altogether.

"With reference to the exhibition, the consul-general at Guatemala reported to the Marquis of Salisbury 'that at the present time the quantity of British goods finding their way to Central America compares favorably with other countries, except the United States; still, it appears to me that this exhibition might be made a means of yet further introducing British industries, if our mercantile community will take it up. It would be necessary for the exhibitors to have some gentleman of good standing, well acquainted with commerce and the requirements of the country, to represent the English section, receive orders, and act as an intermediary between the exhibitors and the purchasing public, so as to build up a permanent increase in the use of English goods. At the present time there is a great demand for machinery (for railway contractors, coffee plantations, sugar plantations, etc.) and hardware of every description; improved appliances for dairy purposes, electric light and motive power, plant, bicycles, etc., all clothing materials, musical instruments, cutlery, jewelry, foodstuffs, fancy goods, and "articles de luxe," generally.

"'The government are earnestly desirous for foreign nations to take part in the exhibition; at the same time, it must be remembered that it was decreed by the National Assembly that this should be a Central American Exhibition, and that in its general principles this must be adhered to; but there will be a department assigned to foreign nations, enjoying all the privileges possible, and the right of competing for the prizes.'

"The exhibits will be: (1) Science and letters; (2) education; (3) fine arts; (4) mechanics and construction; (5) agriculture, horticulture, arboriculture—special cultivations; (6) fauna and flora; (7) ornamentation; (8) various industries; (9) natural products; (10) transport; (11) mining; (12) immigration.

"All applications for space must be addressed to the central committee before August 31, 1896."

EUROPE SEEKING TRADE IN THE ORIENT.

Foreign newspapers explain that "engineers and commercial agents have been sent out to China and Japan by the leading iron and steel concerns of Belgium, with the result that important depots have been established in the Far East, which sends regularly very large orders to Belgium. The result of this enterprise on the part of Belgian capitalists, a Brussels correspondent writes, has already been felt by the leading English lines of steamers. Since last season the Peninsular & Oriental Company have established a fortnightly direct service from Antwerp to Japanese ports. This was followed by direct and regular sailings on the part of the Shire, Glen, Union and North German Lloyd companies. Subsequently the New Commercial Service, a Spanish company, was formed to perform the same voyages, and this was followed in turn by the German Rickmers Line, which took the place of the Union Line, making in all six regular services from Antwerp to Yokohama, each one of which has as much as it can do to carry the cargo booked by its company. King Leopold has for years been anxious to see a closer commercial union between Belgium and Japan, and within the last few days Viscount Aoki, Japanese ambassador to Berlin, who is also credited to the Court of Belgium, has signed a new commercial treaty between the two countries, the Eastern and the Western."

JAPANESE PELAGIC SEALING.

The Japanese are said to be taking an increased share in the seal fisheries of the North Pacific, although so far as these were carried on from the Japanese ports they were not so successful last year. "Of the vessels engaged in sealing 23 were British, 17 American and 5 Japanese, the catch amounting to 31,154 skins, against 59,950 the previous year. The British consul at Hakodate, from whose report these figures are taken, observes that the decrease in the number of vessels engaged (45 in 1895 against 61 in 1894) was due to difficulty in finding skilled hunters; but the Japanese employed in the schooners from the Canadian ports are returning home and are encouraging their countrymen to engage in the enterprise, so that the share of the Japanese in the sealing industry is likely to increase, especially as they are developing the ordinary fisheries on the Siberian coasts and finding them very profitable. Last year the Japanese fishermen caught 600,000 salmon and 160,000 salmon trout. In the island of Saghalien the fisheries in the hands of the Japanese show marked progress. The stations leased by them number 84, and the catch at these was valued at $330,000. Seventy-one vessels were employed, of which two were steamers, and about 2,000 fishermen. Another Siberian coast industry being developed by Japanese is that of edible seaweed. From Saghalien 10,000 tons of this article were sent to China in 1894. The Siberian seaweed is said to be inferior to that of the Yezo coasts, but it is always salable in China."

THE IRON WAGES SCALE SITUATION.

The Pittsburgh *American Manufacturer* says: "Although the situation in regard to annual wage scales for the mills is somewhat mixed, it is thought that a general difficulty will be avoided and everything amicably arranged before long. The main difficulty is in the Mahoning valley, and for the first time in two years every mill is closed down. This is caused by the disagreement over the advance in the puddling rate as proposed by the workers. The valley manufacturers have not agreed to the advance, hence the mills closed on Tuesday last at the expiration of the scale year. The tinplate manufacturers and workmen have also failed to agree, and with a few exceptions those plants are now closed down. On the other hand, the sheet mills have arranged terms for the coming year. Some changes were made in the agreement of last year, but they do not materially affect the trade. Thus a clause has been added to the foot notes stating that on and after July 1, 1896, rollers and crews on sheet jobbing mills working three turns shall change around from second to third turn, and each roller draw his money from the office and pay his crew. Another clause has been added which provides that no more than three changes in the classification of any sheet or jobbing mill can be made during the scale year, and that due notice shall be given before each change. To the scale fixing wages of sheet-mill hands an addition has been made providing that on large jobbing mills working over 50-inch rolls, pair heater shall receive $2.25 per day; matcher, $2 per day; second catcher, $2 per day. This is an advance of about 10 per cent. for the day hands. To that part of the scale fixing terms for roughing and catching on sheet and jobbing mills is added a clause stating that on Nos. 22, 23 and 24 gauges, in doubling in pairs, 90 pairs of 96 inches or shorter shall constitute a turn. Day hands to be paid in proportion to the output.

"Outside of the valleys the general iron scale, as presented by the Amalgamated Association, has been more fortunate. Several Pittsburgh firms have signed, and signatures from other districts have been received. One new feature in the situation is the disposition to join the movement shown at some of the mills which have heretofore been regarded as non-union. This shows that the Amalgamated Association has been extending its lines during the past year. Although quite a number of mills are closed down, there is little apprehension of extended trouble. Reports from Youngstown state that the feeling there is quite hopeful. At this writing the tinplate manufacturers and workmen are again in conference, and prospects are good for a settlement. Even were the different scales all arranged the mills would not all be in operation. Trade has grown so dull that there is ample time for repairs, and the stoppage for this purpose will be considerably extended this summer."

POSSIBLE SOUTH AMERICAN MARKETS.

At the recent farewell banquet in New York of the members of the National Association of Manufacturers and others, who recently sailed on the St. Paul for Southampton, to go thence to South America, with a view to making arrangements for the enlargement of trade between South American countries and the United States, the president of the National Association, Mr. Theodore C. Search, spoke, in part, as follows: "These men who represent all these various industrial interests are not undertaking their journey of 13,000 or 14,000 miles simply to show samples or to sell goods. The work which lies before them is of far greater magnitude and of far greater importance than any orders for merchandise which they may bring back with them. This party is virtually a commission of commercial experts, covering a wide range of business interests. As experts they will study the commerce of southern Brazil, the Argentine Republic and Uruguay; they will ascertain the conditions which keep the trade of those countries within its present channels; they will find out what goods are most in demand in those markets, where they are purchased, and to what extent our manufacturers and merchants can compete with European business houses for this trade with fair prospects of success.

"As business men of experience and judgment, these commissioners will gather such information as will enable them upon their return to suggest what practical steps will be necessary to secure for our manufacturers and our merchants a larger share of the foreign trade of the Argentine Republic, Uruguay and Brazil.

"As American merchants and manufacturers, we count ourselves as pretty shrewd traders, and, therefore, we find everywhere in our dealings with the South American countries one point which troubles us sorely. We are buying more from those nations than we are selling to them. Further than this, our purchases from them have been increasing more rapidly than our sales to those countries have been growing.

"Narrowing the inquiry to the three countries which this commission will visit, there are several features of our trade relations with Argentina, Uruguay and Brazil which call for investigation. We buy annually from Brazil about $80,000,000 worth of the various products of that country, but we sell to the people of that nation only about $15,000,000 worth of our goods, while Great Britain, buying only about $20,000,000 worth from Brazil, sells nearly $40,000,000 worth of merchandise yearly to that country. While the United States is by far the best customer Brazil has, that country buys more from Great Britain, France and Germany than from us. That is not reciprocal trade.

"Germany, France and the United States each sells about $10,000,000 worth of goods in the Argentine Republic yearly, while Great Britain sells as much as all three together. We buy only half as much as we sell in the Argentine Republic, but both sides of our account with that country ought to show some larger figures. If Great Britain can do $53,000,000 worth of business yearly in the Argentine Republic, certainly we ought never to be satisfied with an insignificant $15,000,000—less than one-twelfth of the total foreign trade of that country.

"Uruguay has a foreign trade of about $57,000,000 per year, but our share of this is only about 6 per cent.—$3,588,089—out of the total. Of the countries from which Uruguay buys to meet her wants, Great Britain, Germany, France, Italy, Brazil, and even Spain, have a larger share in the trade than the United States.

"Why we do not have a larger share of the foreign trade of these South American countries and what must be done to increase our portion are problems which cannot be solved off-hand and at long distance. To establish our trade there we must do as our competitors have done so successfully—go down there, stay there, live among the people with whom we want to do business, study their wants, and be willing to adapt ourselves to their requirements."

GOLD IN NATIONAL BANKS AND THE TREASURY.

Mr. M. L. Muhlenman, the New York expert, makes an interesting statement of the distribution of gold in national banks and the Treasury on May 1 for a series of years:

	Gold—in national banks.			Net gold in Treas.	Other cash—in national banks.		
May.	All.	N. Y. city.	Other.		All.	N. Y. city.	Other
1890	153.2	59.0	94.6	186.2	141.6	26.6	115.1
1891	164.6	54.0	110.6	141.7	159.4	35.5	123.9
1892	200.1	77.1	123.0	119.9	196.2	51.8	144.4
1893	170.0	58.1	111.9	92.0	164.9	41.3	123.6
1894	204.8	79.6	125.2	100.2	269.0	113.7	155.3
1895	179.5	55.4	124.1	91.2	206.0	76.5	130.0
1896	157.8	46.6	111.2	125.5	211.8	72.4	139.4

"It is rather remarkable that the national banks of the country have been able to increase their holdings of gold during the period when Europe has taken such large quantities from this country. The banks have lost gold only during the period of bond sales. The national banks have really no use for gold, while the Treasury has. * * * *

"The following shows the denomination of the money in the hands of the people and the percentage of the various forms of currency in circulation on July 1:

	Large denom. amount.	Small denom. per cent.		P. C. of whole.
Gold coin	$456,128,483	....	....	30.2
Silver dollars	52,175,998	....	100.0	3.5
Subsidiary silver	59,999,805	....	100.0	3.9
Gold certificates	42,320,759	87.6	12.4	2.8
Silver certificates	331,259,509	10.3	89.7	22.7
Treasury notes	95,217,361	11.0	89.0	6.3
Currency certificates	31,840,000	100.0	....	2.1
Bank notes	215,331,927	10.8	89.2	14.2
United States notes	225,451,358	34.0	66.0	14.3
Totals	$1,509,725,200	....	....	100.0

A PHASE OF THE STEEL BILLET AGREEMENT.

The Cleveland *Iron Trade Review* says: "The life of the billet pool has been a matter of speculation from the day of its formation. The difficulties in the way of a combination so commanding and involving so many great and diverse interests seem to have been taken account of by its organizers, and the size of the forfeit and the rigidity of the articles of agreement are in keeping with the strain that was evidently anticipated both from without and within. The ready predictions of a short life to the agreement have overlooked the serious consequences of breaking the agreement, apart from any considerations of faith. Yet there are not wanting those who assert that if the arrangement is perpetuated it must be on a new basis, one that will be some cure to the tremendous handicap put upon mills whose product is largely or wholly billets. There is no question of the commanding advantage given to the giants in steel making by making billets rather than ingots the basis of the tonnage allotment. In a time of slack operation like the present, and prices of steel products, with the exception of beams and channels, determined by active competition, there is practically no chance for the customers of the all-billet mill against the big producer, if the latter is at all anxious for business. To the steel manufacturer who begins with ore and ends with nearly all forms of finished steel, it might easily be a matter of no concern whether he turned out a pound of billets, as long as there was no limitation on his tonnage of ingots that went by the route of the blooming mill to plate mill, beam mill, bar mill or sheet mill, and then upon the market.

"With billets at $20.25, Pittsburgh, and bar steel $22 to $23, it can readily be seen that the margin will not allow the bar mill that goes into the market for billets to turn its wheels. And the question that confronts the steel mill whose trade comes from merchant mills is not whether it will get a liberal allotment of the total billet tonnage, which was a matter of some concern in the preliminary negotiations, but whether it will have any business at all. It is this class of mills that is directly affected by the building of open-hearth steel plants by the trade which they have heretofore supplied. And if the market for billets is very largely cut off by the pool, never to be restored, it becomes a serious question with the strictly billet mills whether their pool investment is a paying one.

"Whether the developments that have come thus early will lead to the granting now of the original contention of this class of steel mills is a problem. It is apparent, at least, that an ingot tonnage basis that puts converter against converter would help to relieve what might eventually prove a severe strain on the agreement as it exists."

CANADA'S TRANSATLANTIC STEAMSHIP SERVICE.

The Cleveland *Marine Review* says: "Canada's entire change of government, brought about at the recent election, may overthrow the plans for a transatlantic steamship service, but, of course, there will be nothing definite in this regard until the new government comes into power and its policy is outlined. For years the successive conservative administrations, now overthrown, have been trying to establish this new line of communication with the old world. Parliament was, some time ago, induced to vote a substantial subsidy to any company that would provide a fast service. The subsidy is $750,000 a year for a 20-knot service, by boats of the very best kind. Through the representation of the Dominion government the imperial authorities have agreed to supplement this, if necessary, to the extent of $375,000. Tenders were called for on both sides of the Atlantic, and on the very day on which the present government was defeated at the polls the last of the bids from England were received at Ottawa. The cabinet ministers have had the bids under consideration, and it is understood that of some half dozen offers received the tender from the Allan Line, one of the oldest and largest of Dominion shipping corporations, is the lowest, but details have not as yet been given out. The old government has done the preliminary work of interesting capitalists and the mother country in the undertaking, and it will now be turned over to the new administration."

FOREIGN TRADE OF GREECE.

The London *Daily Financial News* says: "The foreign trade of Greece is somewhat expanding. According to the latest returns to hand, the imports in March amounted to Dr.10,028,879, an increase of Dr.3,109,365 over the corresponding month of 1895, while the exports reached Dr.5,890,289, or Dr.292,958 more than in March, 1895. The figures for the three months ended March 31 are:

	Imports.	Exports.	Excess of imports over exports.
1896	Dr.28,112,183	Dr.15,979,706	Dr.12,132,477
1895	18,644,863	14,807,448	3,837,215

and the adverse balance of trade has therefore increased by Dr.8,295,262, or at the rate of over Dr.33,000,000 a year. This is a very serious matter for a country as poor and as drained of gold as the Hellenic Kingdom. The above balance has to be paid for abroad in gold somehow, and the gold premium is consequently likely to rise still further. The revenue benefited, of course, by the greater import, in so far that the import duties yielded in March Dr.2,276,189 (being an increase of Dr.392,386) and in the first three months of the year Dr.6,566,441 (increase Dr.1,600,735); but this moderate advantage is more than counterbalanced by the growing impoverishment of the country. In 1893 the imports exceeded the exports by only Dr.3,450,000, in 1894 by Dr.35,670,000, and in 1896 the difference is likely to assume still larger proportions. The unfavorable development of the foreign trade is one of the principal reasons why the Athens government, although desirous of arriving at an amicable understanding with its foreign creditors, finds it quite impossible to offer acceptable terms."

THE FRENCH LUMBER MARKET.

The *Northeastern Lumberman* says: "Just now considerable importance attaches to the condition of the French market for lumber. The import duties have been considerably reduced, and the influx of stock from other countries must increase accordingly. France has always imported a large amount of lumber from Germany and Austria-Hungary, but for years the larger source of supply has been Russia and Sweden. Within a few years the Swedish trade has fallen off, while importations from Canada have greatly increased, and those from the United States in a less degree. As is told in another column in a translation from a French lumber journal, the demand for American oak is showing a gratifying improvement.

"The bulk of the wood shipped to France from Canada is spruce, largely small sizes, such as 3x7 and 3x8, while the demand from the United States is for oak, black walnut and yellow pine. The trade in oak and yellow pine can undoubtedly be greatly enlarged by close attention on the part of exporters to the exact wants of French consumers. They often want specific sizes and lengths, and want the stock nearly free of knots and other defects. Sap is especially objectionable and will not be paid for in oak, and there is complaint of rough sawing, which should certainly be heeded, as it is nearly always the result of carelessness or incompetence in the sawyer. The Frenchman also only wants the best varieties of oak, such as are close and even grained and check the least in drying.

"There is little doubt that now is a favorable time to push this trade. The demand for hard woods in France was light during 1894 owing to a general depression in business, and the season of 1895 opened with an excessive amount of stock on hand, which caused a dull trade up to near the close of 1895. But the present season has opened under much better auspices, and there is every reason to believe there is an opening for a considerable amount of hard wood and yellow pine from this country. There are numbers of honorable importing houses in France from whom American exporters can be sure of the fairest treatment, but no haphazard shipments should be made, and none without a pretty thorough knowledge of the requirements of the market—hard wood."

REASONS FOR THE SIBERIAN RAILWAY.

The *Railway Review* says: "Siberia is a Russian Canada, larger and more populous, and, like Canada, it has a great future before it, says the *Fortnightly Review*. It is very rich in gold, while there are whole hills of graphite (black lead) and lapis lazuli; coal can be picked up on the very road near Nerchinsk; there is silver in the same district, and there are rich mines of iron near Nikolaefsk. Siberia, like Canada, is rich in fish. On the Amur river 200,000 puds of the kita fish have been caught within a few weeks in August, when the fish ascend the rivers; the pud (pood) being 40 pounds, that means 8,000,000 pounds of fish. In the Khabarofka museum is a stuffed kaluga fish weighing 30 puds, or 1,200 pounds, caught in the Amur. The Russians have been struck by the fact that 'the prosperity of Canada and its productive activity have grown and continue to grow with a rapidity which appears to us (Russians) miraculous, and by us inimitable, just from the date of the completion of the Canadian Pacific Railway from the Pacific to the Atlantic ocean.' In 1889 they deputed two engineers to observe the Canadian line and its conditions and results. Attention in Russia was drawn to the facts that Canada, a country then of 4,000,000 people, had, by its own resources, without any pecuniary help from outside, connected the two oceans by an iron road 4,500 versts (3,000 miles) long, over very difficult and expensive ground for building, in the short time of four years; that the energetic population of Canada, 3,600,000 in 1871, and only increased to 4,300,000 in 1881, reached 5,000,000 a year or two after the first through train passed Winnipeg in 1886; that the quantity of grain carried in Canada had increased from 303,571 tons in 1886 to 500,000 tons in 1888; that in places without population there had arisen seven new towns, such as Vancouver, founded only in 1886, and holding 9,000 inhabitants in 1891. It was made known to Russia that 'the cost of the Siberian Railway should not be even 65 per cent. of the cost of the Canadian Pacific.'"

TRADE OF VENEZUELA.

The London *Times* says: "The last report from the British consul at Caracas includes reports from vice-consuls at La Guayra, Puerto Cabello and Maracaybo, and it seems that the only British consular officer in Venezuela who has lately resigned is a Mr. Moses Taurel, vice-consul at Barcelona. Trade seems to have been worse in 1895 than even in 1894. Mr. Andral, consul at Caracas, attributes this to the reaction which has taken place after exceptionally extensive trade due to the influx of large amounts of foreign capital. Agriculture is confined to coffee and cocoa. The country has immense plains adapted for cattle, which should be a great source of wealth, as in the Argentine; but the stock raised is of an inferior kind, and is very little more than is required for home consumption. Transport is a great difficulty. The Orinoco, the great natural waterway, has its trade paralyzed by a navigation monopoly, and numerous villages on its banks have been abandoned. British trade in iron, machinery and hardware is the most important, though there is keen rivalry on the part of America and Germany. Latterly some agitators endeavored to create a commercial war against Great Britain, but their efforts have scarcely attracted any notice. When the people desire a good, reliable article they give the preference to one of English make, but on account of general depression cheap wares are more in demand and are supplied from other countries. In cottons the British lead; the best goods for that market, Mr. Andral observes, are those which make a good show and are clever substitutes for superior articles. Owing to political considerations it is expected that the trade between the United States and Venezuela will show a marked increase; but the great incentives to this are proximity and facilities for communication. The absence of new industries is due to the lack of private enterprise and not to want of encouragement by the government. Concessions are frequently granted for developing the natural resources of the country, but with no result. The population is inadequate to develop the country and the various schemes of immigration have failed. The total revenue of Venezuela in 1894-95 was £1,927,002, and in 1895-96 about £1,800,000."

A recent press dispatch says that "a large sample warehouse has been secured at Caracas, Venezuela, through the instrumentality of the Pennsylvania museums, making an important addition to the already large number of exhibitions of American manufactures throughout the world. The object of this wareroom, like those in other countries, is to bring the products of American manufacturers more to the notice of foreign countries, thereby increasing our export trade. In this particular instance a great triumph has been scored over Germany. Under the provisions of the contract with the Venezuelan government permanent exhibits will be maintained in Caracas, Ciudad, Bolivar and Valentia, and no duty charged until the goods are sold and delivered. The regular duty on goods exported to Venezuela is 100 per cent. The granting of the concession to the United States will shut out all other nations who desire to establish a similar institution for at least a year and a half."

SOUTHERN SECURITIES.

The Louisville *Courier-Journal* says: "To show that harm has already been done to the silver states, let us compare the quotations of their bonds at this period of agitation and at a time before the populistic movement had gained such strength. The figures one year ago and of this week will do.

"The southern state securities which are regularly listed for sale upon the New York Stock Exchange, and in which dealings are sufficiently large to justify the sending out of daily quotations by the press associations, are those of Alabama, Louisiana, Missouri, North Carolina, South Carolina, Tennessee and Virginia. The prices of these one year ago, as given in the state and city supplement of the *Financial Chronicle*, and the quotations last Monday were as follows:

	June 28, 1895.	*June 29, 1896.*
Alabama Class A 4-5s	109	105
Alabama Class B 5s	110	105
Alabama Class C 4s	100	95
Alabama Currency 4s	100	100
Louisiana new con. 4s	99	97¼
Missouri 6s	..	100
North Carolina 6s	128	120
North Carolina 4s	107	100
South Carolina non-fund	1⅛@2	1
Tennessee new set 6s	...	80
Tennessee new set 5s	...	108
Tennessee old 6s	...	60
Virginia Centuries	62⅓	58
Virginia Centuries deferred	6	5

"It is true that other bonds have also fallen in price, but their decline is due entirely to the currency clamor, and those bonds whose security is unquestioned are in many cases higher than last year. A sale last week in Philadelphia of Pennsylvania Railroad 6 per cent. bonds, for instance, brought the remarkable price of 136. They have fourteen years to run, and the purchaser, if he holds them till maturity, can expect to realize but 3.03 per cent. on his investment. About three weeks ago the city of New Haven, Conn., sold $100,000 of 4 per cent. bonds at a little over 110. And Massachusetts 4 per cents were recently floated in England at a price which netted to the purchaser only a little over 3¼ per cent. New York and Philadelphia have also floated bonds at nearly as good figures. Our own city's 4 per cent. bonds bring 5 to 6 points more than the state of North Carolina, whose entire debt is only $3,322,800, of which the state owns nearly one-tenth, while Louisville's bonded indebtedness on January 1 last amounted to $9,041,809.

"A deeply humiliating lesson is conveyed in these figures if the people would only stop for a moment to consider them."

JAPANESE FINANCES AND THE WAR.

The London *Times* says: "Mr. Lowther, of the British legation in Tokio, reports that the Japanese revenue for the year, including $40,000,000 of the war indemnity, is estimated at about $138,000,000 and the expenditure at $152,000,000, being an increase of $47,000,000 in revenue and of $62,700,000 in expenditure. To meet the deficit a new tax is proposed on the registration of lands, businesses, etc., a sort of income tax on businesses, an increased tax on saké and a tobacco monopoly. Put in sterling, Japanese revenue in 1895-96 was £9,750,000, and in 1896-97 is estimated at £15,000,000, the expenditure for the same years being £9,600,000 and £16,460,000. For the establishment of an iron foundry over four million dollars have been voted, to be spread over four years.

"The total cost of the war up to the end of the last financial year was $225,000,000, of which $80,000,000 had been repaid as indemnity, and a new war loan covered $30,000,000 more. Previous war loans gave $80,000,000 more and the reserve fund supplied the balance. The supplementary budgets for Formosa and Wei-hai-Wei together amount to nearly $38,500,000, of which the estimated revenue from Formosa will meet over $6,500,000, while Wei-hai-Wei yields nothing. The national debt now amounts to $520.753,119, or, taking the dollar at 2s. 2d., to £56,415,141, of which only £130,360 is foreign. It is intended that the debt shall all be redeemed in thirty-eight years."

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

C. P. FRALEIGH, - - - - - - - - Secretary.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 18, 1896.

Results of serious importance to the Democracy as a party have been produced by the action of the Chicago convention. The platform has been repudiated by men of light and leading in the party in different sections of the country, particularly in the north and east and in the middle west. It is very significant as regards the nature and extent of the breach made in the party by the adoption of the platform at Chicago that of the cabinet of President Cleveland some members have already declared openly against the ticket, and that almost all are counted as probable bolters. Of the leading delegates from New York state in the convention, ex-Secretary Whitney has declared that under no possible circumstances or conditions could he be induced to vote for the Chicago ticket or assist it. Ex-Governor Flower, one of the delegates-at-large from the state, will do what he can to defeat the ticket, and in this attitude he will be supported by large numbers of his political brethren.

Some of those dissatisfied with the action of the revolutionary convention at Chicago have suggested the launching of a third ticket with a platform voicing the sentiment of the sound-money Democrats. A demand for such a convention has been issued by the gold-standard Democrats of Illinois on the ground that sound-money Democrats owe it to the country to make it certain at once that their revolt against free silver is determined and will be organized, and that it is unfair to oblige the credit of the nation and the business and industrial interests of the people to merely guess what the sound-money Democrats will do in November and wait until November to find out. Whether this course will be adopted or not remains to be seen. Much will undoubtedly depend upon the attitude of the Democrats in New York state, and this still remains a matter of doubt. Conferences to determine upon the attitude to be adopted have been held during the past week, but so far as the public is informed, without result. The principal uncertain factor in the situation is Senator Hill, who has pursued a policy of delay. In the meantime some of the local political leaders have declared for Bryan and Sewall through a desire apparently to preserve the character of regularity.

The revulsion against the ticket is not confined to leading members of the party. That it has a wide basis, and that the action of the individual bolters referred to is representative and symptomatic, is shown by the repudiation of the platform and ticket by Democratic newspapers in different sections of the country. Party journals of great and deserved influence have rejected the action of the Chicago assemblage with emphasis, and some of them have advised their readers in vigorous terms to vote for McKinley. The list of bolting party journals is growing. Their influence must stand for something, and the opposition of the independent press, which was prompt to manifest itself, cannot be lightly regarded. Altogether, the outlook for the Chicago ticket is not of the most promising kind.

An effort is being made by the managers of the Bryan campaign to secure the indorsement of the Chicago nominee by the conventions of the Populists and silver parties, which are to meet at St. Louis next week. Present indications appear to point to their success. Many of the silver leaders, notable among them being Senator Teller of Colorado, have declared in favor of indorsing Bryan's nomination, and their advice will carry great weight. As regards the Populist convention, the chances seem to be in favor of an indorsement of the Chicago ticket, though of course the event is still in the future. It is certain that the Chicago nominee is regarded by many if not most leading Populists as sufficiently representative of the sentiments of their party to render their support of him easy. A union of all the Populists and silverites with the Democrats supporting the 16-to-1 ticket is viewed with some concern by the sound-money men who will in that event put forth redoubled efforts to insure the defeat of the combination.

The New York State Bankers' Association opened its third annual convention at Niagara Falls yesterday. The session was opened by President J. G. Cannon in an address in which, quoting some statistics of failures from BRADSTREET'S, he directed attention to the great burden borne by the bankers and the commercial community of the state of New York as the result of failures. He spoke of thirty-five failures in which the bankers of New York had been particularly interested, and which occurred in the first six months of 1896, and into whose affairs an investigation had been made. Twenty-two of these concerns made detailed statements, and it was found that seventeen of them, or 77 per cent., were not in a condition to deserve credit. Of the whole number — thirty-five — twenty-seven either refused to make statements, or, in doing so, revealed their financial weakness, a fact which he held constituted a most powerful argument in favor of the uniform statement system.

In discussing the monetary situation Mr. Cannon gave some good advice to the bankers. He said that too frequently when a tradesman or a farmer goes to his banker to secure a loan he is met with a refusal on the ground that there is a scarcity of money, or he is informed that because of the scarcity of money he must pay a high rate of interest. This, he said, is a poor policy to pursue, especially if money is not scarce. The banker should rather carefully study the conditions that surround his customers, and when refusing advances should frankly and honestly give his reasons for so doing. If a farmer, for instance, is raising only one crop, and that crop likely to fail, thus obliging his banker to wait for his money an entire year, he should be advised by the bank officer to put in more diversified crops or to produce something that will sell for cash, so that he can pay his loans at the bank at maturity. Or if a merchant is selling to a class of trade in a community that is undesirable he should be cautioned and advised regarding this whole subject. In other words, Mr. Cannon continued, the banker should be looked upon by his clients the same as a good family physician is looked upon by his patients, and there should exist between them the utmost confidence.

United States Commercial Agent Moore at Weimar gives an account of the anti-option law recently passed by the German Reichstag. This law prohibits dealings in options, and is intended to restrict speculation in stocks. It appears from the account given of the law, that as to stock speculation the restrictions adopted threaten to exclude from the German exchanges a large class of American industrials and mining and railroad properties, and are especially severe upon new projects. In each exchange government inspectors will be stationed. No stock can be placed on the lists except by direction of a committee, at least a majority of whose members are not members of the exchange. No stock can be listed unless the corporation has been in existence at least one year and has submitted a profit and loss statement for the year; nor can any stock be listed until the committee has thoroughly examined into the soundness of the new corporations and satisfied itself as to the truthfulness of the statements made in the prospectus. Any person guilty of deceit in placing or promoting stocks may be fined 15,000 marks, and there are other severe penalties for offenses against the law.

In a statement regarding the subject of international arbitration, made before the House of Lords yesterday, Premier Salisbury said that the negotiations between the United States and Great Britain were not complete, but that they are advancing amicably. He added, that on the smaller question of Venezuela, regarding which the United States had assumed an attitude of friendly protection, difficulties arose out of the fact that Venezuela's claim placed two-thirds of the colony of British Guiana subject to arbitration. The first thing necessary was to ascertain the real facts in regard to the controversy from the history of Venezuela. When that had been fully ascertained by a commission in which both countries had confidence, he felt that the diplomatic questions which would follow would not be very difficult of adjustment; but even if they should be, those difficulties would be overcome by arbitration. It had been impossible to move faster owing to the absence of a full knowledge of the facts in the case. The labor involved had been enormous.

Touching the question of a general system of arbitration between the United States and Great Britain, Lord Salisbury said there would be difficulty in dealing with cases so large as to contain issues of a vital character. After much discussion with the United States upon that point, he thought that the tendency of the United States was to desire the rapid and summary decision of a question. The British government thought that the principle of obligatory arbitration was attended with considerable hazard. Proper machinery must be first provided. In recent years the United States had evinced a disposition to take up the causes of many South American republics, but this government had not quarreled with that disposition. Great Britain, he added, had taken similar interest in disputes regarding the frontiers of Sweden, Holland, Belgium and Portugal. In studying the welfare of neighboring people it is necessary to remember that the claims of such people may possibly become matters of arbitration, and hence that it is necessary to guard against an obligatory system of arbitration. For these reasons, his lordship said, he had approached the question with considerable caution.

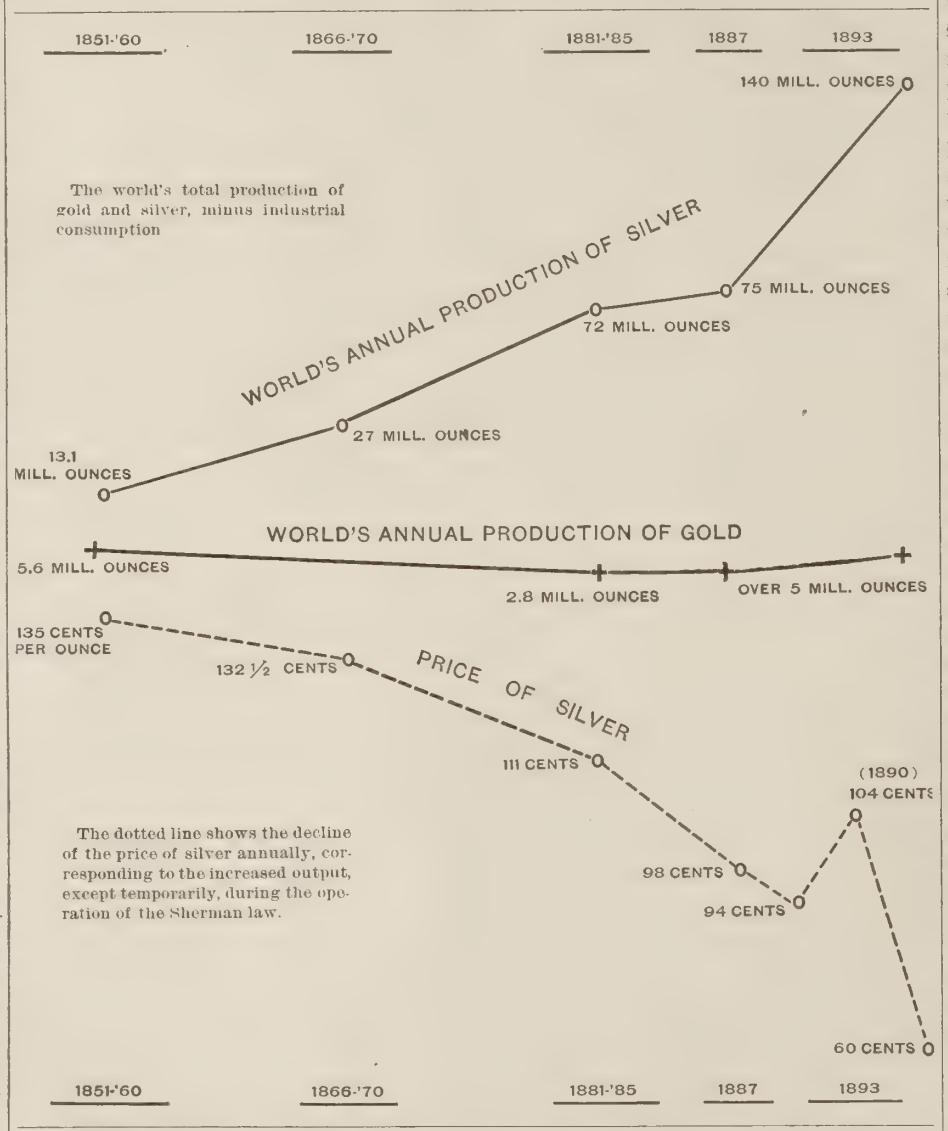
THE SILVER QUESTION.

The present political campaign, leaving aside partisan questions, is evidently to be one of education. The meaning of free silver, 16 to 1, is being discussed in the daily papers and by word of mouth as, perhaps, it has never been before. The most regrettable feature of the situation, at this stage of its evolution, is that so many who are pronounced free silverites and, for that matter, so many who are gold standard advocates, have found themselves not thoroughly equipped for the task of explaining why they hold the views they do. If the campaign is to be fought out on lines of inquiry and logical argument there will be little to fear concerning the outcome, and it follows that every friend of sound money, by which is meant antagonism to the doctrine of free silver, 16 to 1, ought to consider himself a committee of one from now until election day to spread the facts of the situation among his fellowmen.

Perhaps the most lamentable feature in existing conditions is found in the unreasoning, often sentimental sympathy, expressed for the so-called "white metal," as if, indeed, it were an entity, could be abused or offended or have an injustice done to it. When one comes to a question of fact, he finds staring him in the face the metal gold as the accepted standard of value among the more enlightened nations of the world. It is an old and trite story to recount the evolution of money throughout the nations of the earth from the era of cowrie shells up to that of gold. It is equally well-known that such commodities as skins, hides, tobacco, grain, iron and copper as well as silver has each served its purpose as money. That gold is to-day the standard among the first commercial nations of the earth is due to much the same reasons that make the value of any commodity; to its being the most desirable metal for the purpose on various accounts; to its being the most stable in value, due to its comparatively steady rate of production as compared with silver, and to its costing more nearly the same number of days' wages to produce, in given quantities, over a period of time, as compared with other commodities competing for use as money. All questions of value are largely dependent in the last analysis on general agreement as to worth, desirability, cost to obtain and special qualities furthering the object at hand. For these and other reasons gold has come to be the standard of value among the more important nations of the earth. Exceptions are found in China, Mexico, Peru, India and Japan.

In the United States the silver dollar was authorized by the original mint act of April 2, 1792, at a ratio to gold of 15 to 1; the coinage was free and unlimited, and the dollars were made a legal tender for all purposes. In 1834, an act was passed changing the weight of all gold coins, but not that of the silver dollar, which made the ratio 16.002 to 1. In 1837 an act was passed changing the ratio of silver to gold, so that it became about 16 (15.988) to 1, and on February 12, 1873, the coinage of silver dollars was discontinued by the omission of that coin from the list of those authorized to be coined, inasmuch as 371¼ grains of silver used in the dollar had long been worth more than $1, and no silver dollars were in circulation. In 1878, what is known as the Bland-Allison act, reauthorized the coinage of silver dollars at the same weight and fineness as provided in the act of 1837. It also continued its legal-tender quality, unless otherwise stipulated in the contract, but the amount to be coined was limited to that which could be produced from purchases of not less than $2,000,000 nor more than $4,000,000 worth of silver bullion monthly. In July, 1890, the coinage of silver dollars, after July 1, 1891, was discontinued, except to the amount required to redeem Treasury notes provided for by that act.

The act of 1873, by which the coinage of silver dollars was discontinued, has been characterized as the "crime against silver," presumably because of its alleged omission from the products of our mints. It is well at this time to see what this alleged "crime against silver" has amounted to. The total coinage of silver dollars in the United States prior to 1873, for eighty years, amounted to only $8,045,838, and for many years prior to 1873 there were none in circulation, owing to their ratio having been established in 1837 at, practically, 16 to 1, and the commercial value of silver during the intervening period making such dollars worth more than 100 cents, as a commodity. Under the act of 1878, from trade dollars redeemed under the act of 1890, and from seigniorage on the last item, there have been coined within twenty years silver dollars amounting to $419,332,450, or more than fifty times as many silver dollars as were coined in the eighty years prior to 1873. So much for "the crime against silver."



The unthinking and unreasoning demand or cry for the free coinage of silver at the ratio of 16 to 1 seems to be based, in part, on sentimental grounds, inasmuch as that ratio was established by the coinage act of 1837. So much misconception and ignorance exists as to what the expression 16 to 1 means as applied to the coinage of silver dollars, that it may be well to restate it. The gold dollar is composed of 23.22 grains of pure gold and 2.58 grains of copper alloy, 25.8 grains in all, and the silver dollar is composed of 371.25 grains of pure silver and 41.25 grains of copper alloy, or 412.5 grains in all. The ratio of the 25.8 grains of gold (and alloy) to the 412.5 grains of silver (and alloy) is as 1 to 16, and practically a similar ratio exists between the number of grains of pure gold and pure silver in the gold and silver dollars.

Commercial bar silver at New York was quoted at 68.75c. per ounce of 480 grains on the 13th inst. The value, therefore, of the silver dollar on that day may be expressed by $\frac{371.25}{480}$ of 68.75, or 53.17c. Hence "the fifty-three cent dollar." Dividing the number of grains in the ounce (480) by 25.8 grains, the total number of grains of gold and alloy in a gold dollar, an ounce of gold dollars is found to be worth $18.60. A similar calculation with reference to an ounce of silver dollars makes it plain that the latter is worth only one-thirtieth of the value of an ounce of gold dollars. In weight the silver coins are sixteen times heavier, but in value only one-thirtieth as much.

When the ratio of 16 to 1 was established in 1837, it represented the actual or nearly the actual value of equal weights of silver and gold dollars. To-day, as shown, the ratio of value of the silver dollar and the gold dollar is almost one-half what it was at that time. A continuance, therefore, of the coinage of silver dollars at the ratio of 16 to 1 would mean the stamping of fifty-three cents worth of silver with the dollar mark, and its being made a legal tender for the payment of a dollar's worth of indebtedness.

A question demanding attention at this time is the claim of so many so-called "friends of silver" that it was due to the demonetization of silver, the so-called "crime against silver" in 1873, that the commercial value of silver has declined. This is a point on which there has been self-deception, for the claim will not bear the test of examination or analysis. There will be found in connection with this article a chart on which is indicated by means of irregularly drawn lines the increase in the world's production of silver (exclusive of that portion used in the industrial arts) during the past forty years, together with a dotted line indicating the tendency of the price of bar silver, and another irregular line indicating the course of production of gold throughout the world, also exclusive of that used in the industrial arts. If it were wheat or corn, or iron or copper, or some other widely distributed useful commodity concerning which the tendencies of production and prices were indicated during the past forty years, it would, perhaps, be plainer to some people. In any event, we find by reference to this chart that the world's production of silver (exclusive of that used in the industrial arts) increased nearly elevenfold between 1856 and 1893, since which time the production has still further increased. It is also noticed that the world's production of gold (exclusive of that used in the industrial arts) fell off during the first two-thirds of the forty years referred to, since which time it has increased to nearly or about the same total per annum as that coined at the first date in the graphic illustration used. The striking feature of the chart is shown in the two lines representing, respectively, the world's production of silver and the course of the price of silver. It will be noted that the tendency of the latter was, during the period named, to fall off in about the same ratio as production increased, with one noteworthy exception, in 1890, when by the operation of the Sherman act for a brief period the price of bar silver was artificially forced up. Since that time the inevitable law of supply and demand has reasserted itself, and the price has declined as the supply has continued excessive. With reference to wheat, or cotton, or corn, or iron, an illustration of this character would draw from the most obtuse the conclusion that the cause of the depression in its price was the excessive, the absolutely unparalleled increase in production the world over.

If further reasoning were required, it would only be necessary to point out that whereas the average annual production of silver throughout the world from 1873 to 1893 was about 78,000,000 ounces, between 1851 and 1872 it was only about 21,000,000 ounces, pointing to a total annual increased average production of silver throughout the world in the latter twenty years as compared with the former of about 57,000,000 ounces, thus indicating conclusively the failure of the monetary demand for silver to employ the total output of the world, exclusive of the demand for industrial uses. To those who have argued that the increase in the world's population would naturally demand a corresponding increase in the supply of silver for money, it is only necessary to add that, whereas the population of the more enlightened nations of the earth increased only about 28 per cent. between 1873 and 1893, the world's silver output during that period trebled. This, without taking into consideration the decreased use for actual money in the commercial world in recent years because of the increased employment

A GRAPHIC ILLUSTRATION OF WHY THE PRICE OF SILVER HAS DECLINED SO SHARPLY IN LATE YEARS.

of representatives of money such as checks, drafts and other forms of credit, the extent of the use of which, unfortunately, is not generally understood or appreciated.

THE TREASURY RESERVE AND THE EXCHANGE MARKET.

Among the causes which contributed to the disorganization of the stock market and the severe decline in prices during the week just ended, the decrease of the Treasury gold reserve had a leading place. In fact, it may be said that the renewal of gold shipments and the appearance of an inclination, however slight, on the part of interior banks, private capitalists or others to obtain gold at this juncture, presumably for the purpose of hoarding it, was calculated to have a very disturbing influence on financial and speculative sentiment. The gold shipments to Europe for the week amounted to $1,275,000 by the steamers sailing on Tuesday and Thursday, and shipments announced yesterday by to-day's European steamers are $2,000,000 in amount, or a total during the week of $3,275,000. The Treasury gold reserve, however, which at the end of last week was about $99,250,000, has suffered a larger diminution than is indicated by withdrawals of gold on the part of gold shippers, its amount on Friday being $95,000,000. While some exaggeration has doubtless prevailed in regard to the extent of the disposition to accumulate specie, in view of the contingencies which the existing situation might produce, a tendency of that character has to all appearances shown itself. Inquiries upon the subject are said to have been made by many interior institutions, and in some instances—this indeed having also been true during the preceding week—private parties or corporations have availed themselves of the services of bullion dealers to procure the gold for them, usually by the tender of United States notes at the Sub-Treasury and the withdrawal of gold thereon. Banking interests at this center have, however, in every way discouraged such manifestations, and it may also be noted that bullion dealers whose services were taken advantage of in the matter just indicated, and for which of course they were paid a small commission, have in one instance at least announced their unwillingness to act any further in such transactions, taking the ground that the situation offered no warrant for it. In spite of this and of a general and commendable disposition in financial circles to avoid exaggeration as to the danger of anything like a run upon the Treasury gold at this juncture, the speculative markets, always sensitive to such influences, have reflected a certain degree of apprehension in the same connection, and it may be noted that a mere rumor that the leading bankers connected with the bond syndicate operation of 1895 were in communication with the Treasury, with a view to supplying it with gold on some basis if such action should become necessary, had a prompt and effectual influence in checking the bear movement in stocks and creating the rally in prices which marked the stock transactions of Thursday afternoon.

The action of the foreign exchange market has been of a character to justify the apprehensions which have found expression during the week in regard to the probability of heavy gold exports. The rate for demand sterling, which at the close of last week was about 4.88¼ or slightly lower, rose sharply since Monday last on a notable scarcity of commercial drawings, but more particularly on the appearance of an exceedingly large demand for bills of exchange. This latter feature of the exchange market was not explained by anything in connection with the commercial situation other than that foreign creditors have in some cases requested remittances, although there is no tangible evidence that this was by any means general. Suggestions have also been heard that some financial interests, particularly those connected with foreign trade have purchased exchange with the view of hoarding gold or for speculative purposes. It is difficult, however, to trace the demand in question to such a source, and the movement of exchange to a higher level has apparently been the result of the feeling of uncertainty which at such times affects all interests that have any connection with the exchange market, as buyers of bills, just as under similar circumstances the market for securities is influenced by general tendencies from corresponding causes. The supply of bills of exchange drawn against foreign stock purchasers in our market was decidedly small during the early part of the week, but the more decided foreign buying here, which developed on last Thursday in connection with the decided weakness of the stock market, appears to have resulted in a much more ample offering of such drafts with the result that exchange on that day manifested a weaker tone. The situation, however, in this connection necessarily remains unsettled. International bankers are desirous on all grounds of avoiding heavy gold shipments, and a corresponding reduction of the Treasury gold reserve with further disturbing effects on the financial situation, and the unsettling of confidence which they would aid in producing. At the same time the situation has been a difficult one.

TO THE FARMER, THE LABORING MAN AND THE CLERK.

To the Editor of BRADSTREET'S:

SIR—I am asked to say, *first*, what free silver of full legal tender at the ratio of sixteen parts silver to one part of gold would mean to the farmer; *second*, to the laboring man and the industrial employee, and, *third*, to the clerk or other employee in a commercial establishment.

The payments which are now made to these three classes, farmers for their products, laboring men for their work and clerks for their services, are on a gold basis; that is to say, they are paid in representative money, which through the right exercise of the power of the Treasury under the mandatory provisions of existing laws is kept at par with gold.

The purpose of the financial plank in the Chicago platform is to pass a force bill coupled with a coinage act. Under the latter it is proposed to give western mine owners, who now produce silver bullion and sell it at a profit, at the ratio of thirty to thirty-two pounds of silver to one pound of gold, the privilege of coining it free of expense into silver dollars weighing at the ratio of sixteen pounds of silver to one of gold. Bankers engaged in the foreign traffic, in place of drawing bills of exchange for the $250,000,000 in gold coin each year which European states have for the past ten years owed us annually for their purchases of grain, provisions, cotton, etc., in excess of our purchases of goods from them, may spend this balance of our European credit on behalf of whoever is entitled to draw the bills, bankers or others, in the purchase of silver bullion at the rate of thirty to thirty-two pounds of silver bullion to one of gold, bring it to the United States Mint, have it coined into dollars at the ratio of 16 to 1, and force those dollars upon farmers and others.

A coinage act is merely an act for the manufacture of coins. That exhausts the word. Free coinage would be perfectly safe without a force bill or legal-tender act in addition, because no man who had any common sense would accept a bad dollar, intrinsically worth 50c. or thereabouts, in place of a good dollar, unless forced to. An act of legal tender is an act of force. The purpose of the silver party is to deprive the mass of the people of their free choice by acts of legislation forcing bad money upon them when of their own choice they would always desire and choose good money.

What will be the effect of free silver, 16 to 1, upon laborers? They will be cheated in two directions. The first effect of such an act of force, coupled with free coinage, would be general trade paralysis and widespread bankruptcy, corresponding to the conditions which the danger of a mere threat of free coinage brought about in 1893, only a great deal worse. Vast numbers of workmen would be reduced to compulsory idleness, while wages would be reduced. Ere long prices of domestic products would slowly rise. The prices of foreign products, sugar, tea, coffee and the like would be doubled at once. Thus the laborer would be cheated both out of his work, out of his wages, and out of his goods. He would be oppressed at every point.

The farmer might slowly secure a higher price for his crops, but it would become necessary for railway managers to advance their rates or to stop their traffic. The goods which the farmer buys, especially those of foreign origin—tea, coffee and sugar—would be rapidly advanced or doubled in price, because after the product or import had first been cut down by the bankruptcy of the owners it would be but slowly increased, and the price would be advanced in respect to what the farmer buys, while the farmer must go on cultivating full crops whether he can sell them or not at an advance.

Clerks and employees of commercial establishments would, in the first instance, be discharged from bankrupt establishments. Others would be thankful to retain their places at whatever could be offered. Rents would be among the first subjects to be advanced with the price of land; it would be difficult to forecast whether clerks and employees would be subjected to greater loss than the laborors. One thing may be remembered, a laborer can always find something to do if he is willing to do it; a clerk or employee may often be wholly deprived of work for a long period. The proposed silver legislation would, in effect, be protection of the most obnoxious kind of two classes, the miners of the west and the bankers of London, Paris and Berlin, through affording those two classes the power to force bad money upon the people of this country, and even to deprive the whole community of the right to make contracts in terms of gold, a proposed measure being one forbidding any contract except in the terms of the bad money to be forced into circulation.

Bearing in mind that low prices when brought about by way of science and invention are always coupled with increasing rates of wages, which was true down to the silver panic of 1893 since the resumption of specie payment in 1879, one cannot help wondering how the advocates of special protection to silver miners and foreign bankers expect to persuade laborers and employees that they will be benefitted by a forced advance in the prices of the necessaries of life.

It may not be so difficult for them to persuade farmers that they may get some benefit out of higher prices, even if these higher prices are forced by the circulation of bad money. No class has suffered so much as the farmers from the depression and check to enterprise which was brought about by the silver panic of 1893; yet when the case is fairly presented to farmers they will presently detect the fraud.

The capacity of the farm lands now under intelligent cultivation in this country has gone far beyond the consuming power of our own people. For the last ten years the export of farm products has ranged from 10 to 20 per cent. of the whole product, averaging 15 per cent. By a comparison of the declared value of these exports with the farm prices of the same quantities at the farms, a very close estimate has lately been made of the number of persons occupied in agriculture who depend absolutely upon exports for their entire market. The number exceeds 2,000,000 persons occupied in agriculture, and probably exceeds 2,500,000, the proportion of persons being rather greater than the proportion of values, owing to the amount of hand labor which is necessary in making cotton.

The valuation on a gold basis of these exports of farm products ranges from $500,000,000 to $800,000,000 a year. Farmers as a class therefore possess the power to demand payment at the gold standard to the amount of $500,000,000 to $800,000,000 a year, while the dependence of foreign nations upon this country for food and fiber is increasing rather than diminishing.

When these facts are made plain to farmers and the question is squarely put to them whether they desire to be paid in good money—in money good the world over, needing no act of force in the spending, holding within its own substance the elements of its own value, or whether they will empower the silver miners of the west and foreign bankers to force bad money upon them whether they will or no, bad money being silver dollars, which contain within their own substance only one-half or a little more the value for which such dollars are to be forced upon them—can anyone doubt what their reply will be? The whole problem before the advocates of a sound monetary system at the present time is how to bring these facts before the masses of the people.

The bullion value of the silver mined last year slightly exceeded $30,000,000. Its coinage value exceeded $60,000,000. That is to say, if the product continues, as it is likely to continue, to be as great, the privileged class of silver miners may secure a profit on a forced circulation of dollars at 16 to 1 of about $30,000,000 a year, and from their profits in the past they can well afford to employ retainers to mislead honest-minded people or shallow persons who are put forward by them in their effort to carry out their wishes.

EDWARD ATKINSON.

Boston, July 15.

AMERICAN TRADE EXTENSION ABROAD.

Attention has been frequently called to the efforts making by the National Association of Manufacturers to bring about more intimate trade relations between the United States and the outside world. The trip of a number of representative American manufacturers to South America has been already alluded to, as has the journey of several delegates of the National Association to Denmark for the purpose of investigating the opportunities for the extension of American trade in that country. Some encouraging news has been received regarding American trade prospects in Denmark from the American representatives there, Mr. B. W. Campbell, of Cincinnati, special commissioner of the National Association of Manufacturers, and Mr. Charles G. Currey, of Louisville, representing the Louisville Board of Trade. These gentlemen were accompanied to Denmark by Mr. T. Soegaard, of the Department of Foreign Affairs of Denmark. The party reached Copenhagen several weeks ago. A letter from Mr. Campbell to Mr. Theodore C. Search, president of the National Association of Manufacturers, is of interest as telling of the very enthusiastic reception tendered the delegates from the United States by officials and business men of Copenhagen.

On the arrival of the steamer bearing the delegates in the harbor, the latter were met by delegations of prominent officials and business men and given a cordial reception. All the vessels in the harbor were decorated, the American flag being universally displayed. The newspapers gave two and three columns daily in describing the visit of this American delegation. Every facility that could aid in accomplishing the mission of the delegates was placed at their disposal. One of the finest buildings in the city was donated free of charge for the display of samples of American goods which the delegates took with them. A steamship company has placed a vessel at their disposal with which to visit various parts of Denmark. All information to be obtained regarding the business conditions and trade opportunities will be furnished by the Board of Trade of Copenhagen, and much good seems likely to result from this particular effort to extend American trade.

Simultaneously with the receipt of this report from the delegates to Denmark has come a report from Consul Plumacher, of Maracaibo, Venezuela, to the State Department, regarding the contracts made by representatives of the Philadelphia Museums with the Venezuelan government for the display of American manufactures in the various cities of Venezuela. The first news of the successful outcome of the Museums' efforts in this direction, it will be remembered, was given publicity through BRADSTREET'S some months ago. The concession obtained from the Venezuelan government, as explained then, not only allowed for the displaying of American goods in Caracas and other cities in Venezuela, but permitted the import of goods in bond, duties to be paid when the goods were sold and passed into consumption. Permission has been granted the representatives of the Museums to construct a building three stories in height for the use of a museum, and permission has also been given for the establishment of similar museums in the cities of Valencia, Maracaibo and Ciudad Bolivar. All the materials necessary for the construction of these buildings are to be admitted free of duty. Commenting upon this example of enterprise on the part of the Philadelphia Museums representative Consul Plumacher says: "In several communications to the Department of State and for many years past, I have advocated the establishment of permanent exhibitions abroad of all classes of goods manufactured in our country, to give to the people of other nations an opportunity to personally inspect and compare our goods with those of the old world. Germany, England and France overrun South America with commercial traveling agents, mostly energetic young men, well versed in the Spanish language and the customs of South American people, selling from small samples and catalogues, but a commercial traveler for an American house is seldom seen here. As these traveling agents must cost great outlays to European houses, it is clear that permanent exhibitions are cheaper for the extension of our trade. Such an enterprise should have the strongest support of manufacturers in the United States."

A POPULIST VIEW OF THE CHICAGO PLATFORM.

A document of greater or less contemporaneous interest has just been issued by Secretary Turner, the secretary of the national committee of the so-called People's party. It is of particular interest as indicating the light in which the ticket and platform adopted recently at Chicago are viewed by representative men among the Populists. Mr. Turner says in this document, which is a manifesto advising the Populists to ratify the nomination of Bryan at St. Louis, that the result of the late national Democratic convention at Chicago is undoubtedly the triumph of populism. A large portion of the voters in the Populist party in the south and west were, he says, originally Democrats, and left the old party because it was dominated in every national convention by the eastern Democrats, who represented "Wall street and the monopolists of New York and New England." It became quite apparent to every thinking man, he says, that as long as New York was allowed to make the platform and name the candidate of the Democratic party "the great plain people would have no show," and that their rights and wishes would always be ignored. "Believing this, the thinking men among the rank and file determined to quit the old party and organize a new party. Hence the existence of the Populist party. They formulated their demands and declared it to be true democracy. Within the last five years more than two thousand newspapers have sprung up, and the questions of monetary reform and true democracy have been agitated from one end of the country to the other by the Populists. The sentiment growing out of this became so strong that it could be no longer resisted, and when the Chicago convention met it was made manifest."

Secretary Turner goes on to say that the Democratic party at Chicago "to all intents and purposes substituted the Populist platform for the old platforms that the party has been using for years, and which were dictated and foisted upon the people by the gold bugs of the east." "Every gold bug in the whole country has," he adds, "undoubtedly analyzed the situation; they all denounce Mr. Bryan as a Populist, and they also denounce the platform as Populist doctrine from beginning to end." The manifesto goes on to say: "It cannot be successfully denied that the principles advocated by the Populist party have captured the Democratic party, and have driven out of its ranks that element which has always been opposed to true democracy, and which from the beginning has been affiliated with the Republican party, its natural home. All Populists in these United States should rejoice that their principles have taken such a hold upon the American people that one of the great political parties of the nation has been compelled to adopt those principles and nominate a ticket pledged to carry them into execution. For what greater victory could we ask? The time has come when every man must give reason for the faith that is in him. If the Populists think more of their principles than they do of mere party organization, they will be compelled to unite with the forces going in the same direction, and thereby rescue our country from all the dire calamities which we have predicted would befall it should the gold standard be permanently fastened upon us." It is to be supposed that a man in Secretary Turner's position is to be regarded as an expert witness as to what constitutes good populistic doctrine, and if he is to be so regarded his manifesto must make interesting if not entirely pleasant reading for Democrats of conservative tendencies.

FOREIGN TRADE STATISTICS.

Statistics for the completed fiscal year are presented in the preliminary foreign trade figures just issued by the Bureau of Statistics of the Treasury Department. These figures, which are corrected to July 15, show total exports of merchandise for the month of June amounting to $66,618,162, which represents an increase of over $11,600,000 as compared with the corresponding month of last year. The imports for the month were valued at $56,159,045, which represents a decrease of over $5,500,000 as compared with the corresponding month a year ago. Of the imports those free of duty were valued at $25,146,179, a decrease of nearly $5,600,000 as compared with June, 1895, while the dutiable imports were valued at $31,012,866, which is an increase of not quite $100,000 as compared with the corresponding month last year. The exports for the month showed an excess of $10,459,117 over the imports last month, whereas in the corresponding month a year ago the imports showed an excess of $6,694,214 over the exports.

For the twelve months ending with June the exports were valued at $882,519,229, which represents an increase of nearly $75,000,000 as compared with the preceding year. The imports were valued at $779,717,306, which represents an increase of over $47,700,000 as compared with the preceding year. The dutiable imports were valued at $409,930,908, which represents an increase of nearly $41,200,000 as compared with the preceding twelve months. The non-dutiable imports were valued at $369,786,398, which represents an increase of a little over $6,500,000 as compared with the preceding year. The exports showed an excess over the imports for both years, the excess amounting to $102,801,923 in 1895–96 as compared with $75,568,200 in 1894–95. The exports, as will be seen by comparing the figures, exceeded the imports in value by over $102,800,000, whereas the excess in the fiscal year preceding amounted to only a little over $75,500,000.

Exports of gold coin and bullion for June amounted to $6,915,066, as compared with only $131,641 in June, 1895, whereas the imports amounted to only $899,325 as compared with $2,095,391. The exports showed an excess over the imports amounting to $6,015,741 in June last, whereas in June, 1895, the imports showed an excess of $1,963,750 over the exports. For the twelve months ending with June the exports of gold coin and bullion amounted to $112,309,136, an increase of over $46,000,000 as compared with the preceding twelve months. The imports of gold coin and bullion for the year amounted to $31,787,849, which represents a decrease of over $3,300,000 as compared with the preceding year. In both periods the exports were in excess of the imports, the excess amounting to $80,521,287 in 1895–96 as compared with $30,984,449 in 1894–95.

The exports of silver coin and bullion for the month of June amounted to $4,347,778 as compared with $4,087,836 in June, 1895. The imports for the month were valued at $1,206,951, an increase of nearly $250,000 as compared with the corresponding month of 1895. In both months the exports showed an excess over the imports, the excess amounting to $3,140,827 in June, 1896, as compared with $3,128,232 in June, 1895. For the twelve months ending with June, the exports of silver coin and bullion were valued at $59,862,956, an increase of over $12,600,000 as compared with the preceding fiscal year, while the imports were valued at $13,136,611, an increase of over $3,500,000 as compared with the preceding year. For both periods the exports showed an excess over the imports, the excess amounting to $46,726,345 in 1895–96 as compared with $37,674,797 in 1894–95. The movement of gold ore was comparatively small as usual, the exports for the year being valued at only $100,811 and the imports at $1,736,639. The movement of silver ore was more important. The exports for the year were valued at $678,984 in 1895–96 as compared with $67,969 in 1894–95. The imports of ore, on the other hand, were valued at $15,620,448, an increase of nearly $5,000,000 as compared with the preceding year.

DISCRIMINATION AND THE SHORT-HAUL CLAUSE.

One of the cases most recently decided by the Interstate Commerce Commission, McClelen et al. vs. Southern Railway Company et al. involved the application of the so-called long and short-haul clause, Section 4, of the interstate law. This is the section of the law which provides that it shall be unlawful for any common carrier, subject to the provisions of the act, to charge or receive any greater compensation, in the aggregate, for the transportation of passengers or of like kind of property, under substantially similar circumstances and conditions, for a longer than for a shorter distance over the same line in the same direction, the shorter being included within the longer distance, though the section is not to be construed as authorizing any common carrier to charge and receive as great compensation for a shorter as for a longer distance. The complainants in the case before the Commission set forth that the defendant railroads had established rates on different classes of freights from Baltimore, New York, and Philadelphia to Piedmont, Alabama, which were in excess of those to Anniston, Alabama, and that the charging greater rates for the shorter distances from the seaboard cities mentioned to Piedmont than for the longer distances over the same

lines, in the same direction from the same points of shipment, to Anniston, constituted a violation of the long and short-haul clause, and that they thus gave an undue and unreasonable preference or advantage to Anniston, and subjected Piedmont and those doing business in the surrounding country to an undue prejudice or disadvantage in violation of the act to regulate commerce. There was no allegation that the rates in question to Piedmont were excessive or unreasonable in themselves, the gist of the complaint being that they were unreasonable and unjust as compared with the rates to Anniston.

In the course of the hearing it was shown that Piedmont merchants encountered active opposition from Anniston merchants in territory in the immediate vicinity of Piedmont, and that the lower rate to Anniston drew trade that way, as one witness put it. The Piedmont merchant, it was shown, buys his goods in the same markets and at the same prices as the Anniston merchant, but the lower rates to Anniston enable the Anniston merchant either to undersell the Piedmont merchant or to realize a greater profit at the same price. In territory equidistant from Piedmont and Anniston, the former does considerable business. Between this equidistant territory, however, and Anniston, a mountain intervenes, and this mountain is to the disadvantage of Anniston, and to some extent neutralizes the disadvantage in rates to which Piedmont is subjected. Whenever the Piedmont merchant can sell at all in competition with the Anniston merchant, it is at a less profit because of the higher rates to Piedmont.

The Commission decided that, under the circumstances, the higher rates to Piedmont were unlawful, and it directed that an order be issued requiring the carriers complained of to desist from making and enforcing them. It held that the exaction, without lawful excuse, of a greater compensation in the aggregate for the shorter than for the longer haul over the same line in the same direction, the shorter being included in the longer, which is forbidden by Section 4 of the act to regulate commerce, is only a form of unjust discrimination or undue preference, to which, it seems, Congress desired to call particular attention because of its prevalence in certain sections of the country. The complaint alleged violations of this provision of the law, and the proof, so far as rates are concerned, related to this species of discrimination. The proof, the Commission said, was positive, and was not denied, that the defendants in the rates complained of made the lower charge in the aggregate for the longer haul over the same line through Piedmont to Anniston, and that this discrimination resulted in injury to Piedmont merchants and in giving Anniston merchants the advantage in territory where they met in competition.

It had been contended by the railroads that the greater charges for the shorter distances to Piedmont were justified by the competition of another railroad subject to the act to regulate commerce. The commission said, in answer to this contention, that under the construction by the commission of the fourth section, or "long and short-haul clause," of the statute, in its former rulings, this claim could not be admitted except upon application to the commission for exemption from the rule, because the competition under which the defendants would justify the lower rates to Anniston, the longer haul, than to Piedmont, the shorter haul, arose with a competitor, the Louisville & Nashville Railroad Company, which is an interstate carrier by rail and amenable to the act to regulate commerce. It said, further, that the elements of competition, and all matters relative thereto, might be presented to the commission for determination upon application of defendants for relief from the operation of the fourth section of the act, under the proviso to said act, and that the decision in the case was in no wise to be construed to preclude the defendants from making such application under the provisions of the act.

FOREIGN PARTICIPATION IN THE STOCK MARKET.

London is credited with having been a large purchaser of stocks in Wall street during the past month. The buying from that quarter and the encouraging speculative feeling which followed the St. Louis convention was, as was pointed out in these columns at the time, followed by sales which left very little on the credit side of the account. The foreign participation that had been in progress before the Chicago convention reached a decision and the weakness in prices that has followed the action of that body in regard to platform and candidate have, however, been on a large scale, and the fact that a good many stocks have transferred into ten-share holdings for shipment abroad has created the impression that the movement meant a more or less permanent absorption of our securities by foreign speculators. The current estimates of the amount thus taken vary, and are necessarily unreliable. Some authorities put it at between 150,000 and 200,000 shares during the past fortnight. Still the feeling has been that it was a genuine movement, and that even if the British investing public continued, under existing circumstances, to be sceptical in regard to "Americans" the speculative interests in the London market were inclined to take a favorable view of the outcome of the fight for sound money in its relations to stock-market values here.

Subsequent developments have, however, seriously tended to modify these impressions. The activity of the American department of the London Stock Exchange has, indeed, been much greater than for a long time past. Cabled accounts, however, agree upon one point, namely, that the public is not active, and that the trading has been in the main the work of a few houses usually interested in American stocks. There is nothing to negative the report that some of the large operators in the mining market have given a certain amount of attention to our stocks and purchased speculative lines of the same on the decline of the past fortnight. This, however, does not seem to have been general, nor do the interests in question appear to have found any considerable number of imitators.

People in this market with London connections have been somewhat reticent in regard to the conditions surrounding London's apparent revival of interest in our securities. It is therefore interesting to read in the London *Statist* of July 4 what purports to be an inside account of the manner in which the activity in the American department originated. The insinuation, in short, is that it originated in New York, and that its net result is to transfer large bull accounts from the latter city to London. It states that a belief exists in well informed quarters that the contemporaneous appearance of a series of "slumps" in prices at New York with a series of mysterious but large purchases in London, and the consequent erratic behavior of the two markets was due, as is claimed, to the fact that a large New York speculative interest "operated on an enormous scale in American railway shares—and by this expression of 'shares' must be understood Louisvilles and Milwaukees, in which alone are there any appreciable dealings in these days. Particularly in Milwaukees were there heavy commitments. A desire evidently existed to stop the combination from making large profits at the expense of the market. In other words, what so often happens in America was enacted, the group was 'gone for.' The first operation was to call in from it money it had borrowed to carry the large load of shares running into several tens of thousands in the aggregate. The necessity arose for the combination to realise, so as to meet its engagements. Now comes the curious feature. It is suspected—very shrewdly so—that the day-to-day plan of New York dealing was found so treacherous and inconvenient that, while this group had been realizing with both hands in New York it has been the real purchaser in London. So that the 'bull' account has been as quietly as could be arranged shifted to London."

This latter alleged feature of the situation is attracting some attention here. The fact that foreign buying on such an apparently extensive scale failed to give more support to values has not escaped notice. It has tended to affect the speculative position of international stocks and to encourage the vigor and confidence with which the bear party have pressed their attacks on them during the present week, features which would scarcely have appeared if the leading speculative operators had concluded that the foreign public interests there had actually absorbed such apparently large amounts of our shares. It must also be mentioned that the arrangements at which the *Statist* hints were not directly connected with the ordinary arbitrage trading between New York and London in the securities having international quotations, a form of business which is always seen in operation when activity in Americans springs up in London from any cause.

SIX MONTHS' CAPITAL RAISING IN LONDON.

Attention has been called in these columns from time to time to the extraordinary accumulation of idle money in the London market and the equally extraordinary numbers of new companies and undertakings being floated there in all departments, except the American. The London *Economist* now presents a very interesting summary of the results in this respect during the first six months of the year 1896. "Great as was the application for new capital which marked the first quarter, the movement has been unabated since March 31, and the sum total of new stock and bond issues offered in London for the half year ending June 30, according to the *Economist's* figures, reaches a total of £79,494,000, or $397,970,000, a sum which exceeds the offerings of any corresponding half year since 1890, when the Argentine boom was still in existence. For the three months just ended the amount of the applications of this kind to the public was no less than £48,000,000, or $240,000,000, the record for the same quarter in the preceding year being £23,000,000, or $115,000,000 against £19,000,000, or $95,000,000 in 1894, and £18,000,000, or $90,000,000 in 1893.

The same journal gives an interesting classification of the various loans and share issues which contribute to the sum total of £79,494,000 for the half year. The items in its list are:

Foreign government loans	£11,[illegible]
Indian and colonial loans	[illegible]
British corporation stocks	[illegible]
Colonial and foreign corporations	[illegible]
Home railways	[illegible]
Indian and colonial railways	[illegible]
Foreign railways	[illegible]
Mining companies	[illegible]
Land and finance companies	[illegible]
Cycles and appliances	[illegible]
Motor carriages and cars	[illegible]
Breweries and distilleries	[illegible]
Companies to acquire patents	[illegible]
Stores and trade companies	[illegible]
Manufacturing companies	1,965,200
Hotels, theaters, etc.	[illegible]
Lighting and water	[illegible]
Docks, harbors and shipping	[illegible]
Miscellaneous	[illegible]
Total	£79,494,000

The principal foreign loan was that of the Chinese government, and it is remarked by the newspaper from which the figures just given are quoted that the proceeds of this operation never left the Bank of England, except it was paid out to meet the wants of the Japanese Treasury to meet its obligations to Great Britain, thus reducing the disturbing effect of the operation upon the London money market. The only other foreign loan was that of the Uruguayan government, which endeavored to place £1,000,000 5 per cent. bonds at about 71 per cent. of the par value, "an attempt which, notwithstanding the high rate of interest, did not prove very successful." The actual money calls, as stated by the *Economist*, payable during the half year upon this enormous total of capital raised, or attempted to be raised in Great Britain, were £33,700,000, or $168,500,000, and, as it states, it was somewhat remarkable that these large demands should have made no apparent diminution in the amount of the idle capital available for such purposes.

A brief reference is made by the journal in question to the cycle "boom" and the way it has been worked by the enterprising company promoters. The amount of over £11,000,000 credited to this item includes cycle manufactures, as well as concerns engaged in the production of tires and appliances. No less than £5,000,000 represents the capitalizing of the Pneumatic Tire Company's business, though, as it states, a large number of the concerns turned into joint-stock companies have made their appeal for public capital without adequate record of their past performances, the *Economist's* brief reference to the matter being calculated to create the impression that the enterprises in question do not, as a class, have a very substantial foundation.

Most of the other items explain themselves. Mines, however, are an exception. The sum given in the above tabulation is classified by the *Economist* into West Australian, £4,256,200; New Zealand, £1,074,000, and all others, £2,154,000. Owing to the political situation in South Africa that region has furnished comparatively few examples, and the energies of the promoters of such enterprises have been turned to "Westralians," while it is also stated that in a few instances the development of gold properties in British Columbia and in the gold fields of Cripple Creek, Col., furnish the basis of the applications. The "Westralians," however, furnish the bulk of such applications, and the authority in question does not fail to point out that in flotations of this kind the vendor usually takes a part—sometimes the majority—of the purchase price in shares. In fact, it offers a warning to the British public against ex-

cessive confidence in accepting the plans and statements of promoters in this class of enterprises.

RUSSIAN FINANCE.

Russian finance is little understood even in Europe. On this side of the Atlantic it is an unknown quantity, except when, as has lately happened, Russian plans enter into the foreign banking world and create a drain upon our gold reserves. For this reason a recent article in the London *Daily Financial News* can be quoted with interest. It deals largely with the personality of M. De Witte, the present Russian Imperial Minister of Finance, who succeeded the renowned Wyschnegradsky, and who has distanced him in cleverness if not in real financial ability.

The point is made that when De Witte was called to his high post "Russia had already accumulated a vast national debt, and was mainly dependent upon Germany for the issue of loans. The English market was practically closed, whereas France had held completely aloof from Russian securities. Under such circumstances, Prince Bismarck's well-known official advice to his countrymen to sell out of, and his simultaneous order forbidding the Imperial Reichsbank to grant advances on, Russian funds, might well have discouraged the financial authorities at St. Petersburg. But De Witte could not be baffled. He boldly addressed himself to the French republic, whose political isolation and urgent necessity of counterbalancing, by means of an alliance, the power of united Germany, Austria and Italy, seemed to offer a splendid field for the execution of his financial schemes. As far as it is generally known, Russia never entered upon a formal contract with France, though she made a great show of her friendly disposition towards the Paris government, and on these slender grounds managed to raise loan after loan, which French investors absorbed eagerly, as they were told by their issuing houses that the security compared favorably with French rentes, whereas the rate of interest was considerably higher. What with new loans, conversion of older issues and the guaranteed railway bonds, as well as the 400,000,000 francs raised by China under Russian guarantee, the French are now believed to hold about thirty different kinds of Russian loans of the aggregate value of $2,200,000,000, or in round figures, two-thirds of the whole national debt of the empire. The debt itself and its service are rapidly increasing. The figures for the last two years were:

	——Rubles——		
	1896.	1895.	*Increase.*
Debt in gold	2,038,284,210	1,882,920,563	155,363,647
Debt in paper	2,884,060,317	2,704,627,539	55,441,778

By simplifying the account at the official rate of 1.60 ruble paper for one ruble gold the total debt on January 1, 1896, amounted to 3,801,000,000 rubles gold, or $3,040,000,000."

Taking the Russian official budget for the current year, the journal in question figures out that the country at the close of the year was deeper in debt by 450,000,000 rubles, or $240,000,000, than at year before. The same authority continues in these words: "In the present year expenditure seems to increase even on a higher scale than before, if the returns of the first two months, so far published, indicate the course of the entire period. This may be due, of course, to exceptional circumstances, although it, nevertheless, shows the growing tendency of incurring a practically unlimited expenditure. If Russia could not count upon the constant and powerful support of the French haute finance her credit would seriously suffer from an attentive perusal of her actual position. The facility of borrowing has made her reckless. She spends hundreds and hundreds of millions for the construction of railways which cannot pay the working expenses for generations to come, while she stops at no expense where the furtherance of her political ambition is at stake. In this spirit she interfered, in conjunction with France, between China and Japan, and almost compelled the former power to accept a loan of £16,000,000 at the low charge of 4 per cent. interest. The Eastern nations may be excused if they imagined that Russia really advanced the money, whereas she got France to find the cash on the security of her guarantee. This fact was, moreover, concealed by the nominal participation of Russian banks in the issue."

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

The traffic officials of the principal western roads have received summonses to appear before the Interstate Commerce Commission in Chicago on August 4 to answer under oath whether they have directly or indirectly given undue preferences or advantages by paying rebates, or making other unlawful concessions to shippers on business from Kansas City, Leavenworth, Atchison, St. Joseph, Omaha, St. Paul and Minneapolis and all points east thereof. The roads to be investigated are the Atchison, Topeka & Santa Fé; Chicago & Alton; Chicago & Northwestern; Chicago, Burlington & Quincy; Burlington & Northern; Chicago, Great Western, Milwaukee & St. Paul; Chicago, Rock Island & Pacific; Chicago, St. Paul, Minneapolis & Omaha; Hannibal & St. Joseph; Missouri, Kansas & Texas; Missouri Pacific; Illinois Central; Wabash, and Wisconsin Central lines. As no complainant is named, it is assumed the Interstate Commerce Commission has decided to institute these proceedings for the purpose of finding out whether the lines have been paying rebates and manipulating rates on grain, etc., from points in the west. Under the ruling of the United States Supreme Court in the Brown case, witnesses will be compelled to answer, under oath, all questions, even if incriminating them. This will be the first investigation of this nature since the Supreme Court declared the law constitutional, and therefore great interest is manifested in its result. The railroads named above are ordered to file answers with the commission by July 23.

The depression in the pig-iron market resulted in a meeting of prominent producers at Philadelphia this week, whose purpose was presumed to be an attempt to devise some method of regulating production and prices. None of those present at the conference were willing to explain. Within the past few years pig-iron prices have become "somewhat demoralized," owing to excessive output, manufacturers both north and south having cut prices to an extent not generally anticipated, in the attempt to outdo competitors. When the recent falling off in demand for crude iron is recalled, the effect on the industry may be imagined. Some of the most important pig-iron producers of Pennsylvania, Tennessee and Alabama were present at the conference, and, it is understood, they discussed the condition of the trade, causes of depression and plans for relief, but without definite conclusion, so far as known. The Philadelphia *Ledger* says: "On other occasions futile efforts have been made to organize a pool, trust or combination. A majority of the representative producers could not be obtained at the previous meetings and prices could never be controlled with satisfaction." There are 469 furnaces in this country.

Advices from Washington indicate that, owing to the fact that the amount of silver dollars in the Treasury available for the redemption of Treasury notes has become reduced to 10,659,582, and will be further reduced by redemption during the current month, the coinage of silver dollars by the mints will be increased from $1,500,000 to $3,000,000 per month from August 1, and will probably be continued at that rate, in order that the Treasury may have a sufficient stock to redeem Treasury notes presented in exchange for silver dollars. On March 1, 1893, the Treasury held 29,390,461 standard silver dollars for the redemption of Treasury notes issued under the act of July 14, 1890. On the 15th inst. the number of silver dollars held by the Treasury for the redemption of Treasury notes is 10,659,582. Since March 1, 1893, the coinage of silver dollars has aggregated $11,983,056. Of this sum, however, $2,311,677 was profits or seigniorage, which leaves $9,671,379 for the redemption of Treasury notes. The amount of Treasury notes redeemed in silver dollars and canceled from November 1, 1893, to July 14, 1896, was $28,402,258.

The Texas trade outlook, naturally enough, resembles that in the country at large. Uncertainty as to the political outcome in the coming fall tends to restrict business within narrow lines. The agricultural situation, too, in some respects is less encouraging than one or two years ago. In sharp contrast with last year, the corn crop this year will be quite short, and the same is true of oats, wheat, and of nearly all cereals, dry weather early in the year having cut short nearly all these crops. The cotton crop outlook, however, so far as yield is concerned, is quite encouraging, and predictions of a yield of 30 per cent. in excess of last year are confidently made. The outlook as to prices, however, is less favorable at the present time, values being, as a rule, very low. The fruit crop of Texas this year has been a very large one, and the return from the citrus crops particularly has been very good. The sugar crop promises to be very much larger. In manufacturing and industrial lines steady progress is being made. New coal mines are being constantly opened up, and a profitable business for the railroads is predicted for next autumn and winter. The jobbing business has been and is now fairly good. Reports as to collections are not unsatisfactory. The outlook, as above stated, for general business is regarded as in some respects uncertain. The opposition which has been developed to the free-silver idea in Texas is one of the most encouraging features under review. Some predictions have been made of Texas being carried this fall for sound money, but it is safe to say that such a result would surprise and delight the most sanguine advocates of an honest currency.

CURRENT BUSINESS NEWS.

Industrial.

The twentieth annual convention of the Glass Bottle Blowers' Association of the United States and Canada has been in session in Streator, Ill., this week.

The Miners' Union at Cripple Creek, Col., have ordered a strike to compel the mine owners to employ none but union men.

Convict labor for road work is being utilized in California, and the California Highway Bureau has had a rock-crushing plant erected at the penitentiary at Folsom. The convicts quarry the stone and attend to the crusher, and the broken stone is supplied free to road contractors, a check being kept to insure that the stone is used for the purpose intended.

Secretary Rounseville of the Fall River Cotton Manufacturers' Association, has received a letter from a southern cotton manufacturer in which the writer says that 1,913,000 out of a total of 2,500,000 spindles in the south have agreed to shut down 38½ per cent. of the time between July and October.

From the monthly reports made to the *American Manufacturer* it is estimated the total production of pig iron in the United States for the first six months of 1896 at 4,967,487 tons. "The production for the first six months of 1895, according to reports made to the American Iron and Steel Association, was 4,087,358 tons, and for the last six months 5,358,750 tons. In other words, the production for the first six months of 1896 is 879,929 tons in excess of the production for the first six months of 1895, and 391,263 tons less than the production for the first six months of 1895, and 391,263 tons less than the production for the last six months of 1895."

The total production of crude petroleum in the United States in 1895 was 52,983,526 barrels, valued at $58,671,279, against 49,344,516 barrels in the previous year, valued at $35,522,095. Statistics compiled for the Geological Survey by expert Joseph D. Weeks, show that all important producing districts shared in the increase, except West Virginia and New York, which showed slight decreases. Since the beginning of operations in Titusville, Pa., in 1859, the enormous total of 709,713,403 barrels of crude petroleum have been produced in the country, of which 516,657,260 barrels represent the product of the Pennsylvania and New York oil fields. The stocks in the Appalachian oil fields at the close of last year were 5,344,784 barrels, a decrease from 6,499,880, the stock on hand at the close of the preceding year. The features of the year were the stock decrease, the increase of production in Ohio, Indiana and California, rise in prices and extension southward of the profitable producing districts of the Appalachian range.

Commercial.

The fourth annual convention of the National Retail Jewelers' Association was in session at Atlantic City this week. The next meeting place will be Detroit, Mich.

A Baltimore dispatch says: "Three thousand tons of iron ore from Conception bay, Belle Isle, Newfoundland, arrived at Sparrow's Point Saturday in the British steamer Glenmavis. It is the first cargo of the ore shipped from the Conception bay mines to the United States, and is the first consignment of 50,000 tons to be brought to this port for the Maryland Steel Company. To make a test of the ore, the compay will soon put another furnace in blast."

The report of the H. B. Claflin Company for the half year ending June 30, 1896, is interesting as portraying the conditions ruling in the dry goods trade during the first half of the year. After paying dividends at the rate of 5 per cent. on the $2,600,300 of first preferred stock, and at the rate of 6 per cent. on the $2,570,600 of second preferred, the surplus for the $3,829,100 of common stock was only .41 of 1 per cent., as against 5.67 per cent. in the preceding six months. After paying the half-yearly 3 per cent. on the common stock, therefore, the surplus is now reduced about as much as it was increased in the autumn of 1895.

The Chattanooga *Tradesman* has received a large number of letters during the past week from southern manufacturers in regard to the present condition of trade and the outlook in industrial circles. "These reports are in the main encouraging. While the unsettled financial question tends to depress business and the usual midsummer dullness prevails, the prospects are still encouraging for an early renewal of activity."

The United States and Hayti Telegraph and Cable Company has been incorporated at Albany with a capital of $1,800,000, the route and points to be connected to be as follows: From New York City to Coney island, thence by submarine cable to the island of Hayti, in the West Indies; and from New York city, through the states of Connecticut, Rhode Island and Massachusetts to Boston. The directors are John W. Mackay, George Clapperton, Albert Beck, John Beattie and Charles E. Merritt of New York City, Albert B. Chandler and Edward C. Platt of Brooklyn.

The southern iron and steel industries report a decreased demand, except in the Birmingham district, where the furnaces are in full blast with prospects of an idle furnace being blown in at an early date.

The New York *Journal of Commerce* says, editorially: "There is some force in the complaint of the canal boatmen of the elevator charges at Buffalo, and there may be some in their complaint of the elevator charges here. It is certain that New York has sharp competition from the ports south of it, and that it is of great importance that this competition shall be met."

The information obtained by the Philadelphia Museums is secured through the various chambers of commerce abroad, government commissioners and resident correspondents. Furthermore, some of the Museums' staff are constantly investigating the markets where American goods should be more largely sold. "And, while the exports of manufactured goods have been larger during the past year than ever in the history of the United States, still, by the proper use of the valuable information to be secured at this, the greatest commercial institution in the United States, it is argued the figures for 1897 will show a still more gratifying result."

A meeting of large watch-jobbing firms was held in New York this week to consider a proposal to form an association to maintain prices, but a resolution was adopted declaring the plan inexpedient.

The general cargo trade from Hamburg to Philadelphia keeps brisk. "Two vessels are about due from that port, and one left on Sunday, and two more are now loading there for Philadelphia. Sugar forms the good part of the cargoes. This is because the output from Cuba, which, before the present insurrection began, supplied the United States with most of its sugar, is small."

A London correspondent of the Philadelphia *Ledger* writes: "The value of American agricultural implements imported from the United States into England has risen from $322,895 in 1887 to $757,715 in 1895, while the total value of American exports of such implements to all countries has risen during this period from $2,427,000 to $5,319,000, a pretty certain indication that foreign buyers want these implements."

Financial.

The following securities were sold at auction this week at New York:

11 Shares Texas & Pacific Railway Company, $100 each	5¾
$110.26 Texas & Pacific Railway Company, 2d mortgage bond, scrip	6½
125 Shares Deadwood-Terra Mining Company, $25 each, per share	$1.35
56 Shares Boston Land Company, $100 each, per share	$2.25
$20,000 The Marietta Run Coal and Coke Company, 1st mortgage 6 per cent. gold bonds, due March 1, 1913. March, 1895, coupons on	$1,000
30 Shares Murray Hill Bank, $50 each	101

The State League of Coöperative Savings and Building Loan Associations has been holding a convention in Brooklyn. Thomas F. Larkin, president of the league, said in an address: "The delegates present represent the Coöperative Savings and Building Loan Associations of the state of New York, with a membership of 150,000 persons and an investment of about $50,000,000; not invested in western farm mortgages or ordinary real estate for speculative purposes, but in the homes of the members, men and women, of these associations."

The convention of the New York State Bankers' Association, held at Niagara Falls yesterday, was an important gathering.

The Columbus Street Railway Company has declared a quarterly dividend of 1 per cent., payable August 1.

The Toledo & Ohio Central Railroad Company has declared a quarterly dividend of 1¼ per cent. on its preferred stock, payable July 25.

The Boston & Maine Railroad Company has declared a quarterly dividend of 1½ per cent. on its common stock, payable October 1, and a semi-annual dividend of 3 per cent. has been declared on its preferred stock, payable September 1.

Charles O'C. Hennessey made an address Thursday on "Home Owning and Taxation" before the League of Building and Loan Associations, which has been holding a convention in Brooklyn. "He said that the last statistical report of the banking department indicated that there were 25,000 heads of families in this State who were paying for homes worth $50,000,000 through the co-operative building and savings associations, More than $10,000,000 of small savings went every year to swell the home-getting fund. He regretted the fact that the tax laws do not encourage thrift, industry and home-getting. The laws of 1861 granted special exemption in the matter of taxation to small savings of the investing members of these institutions, but not so with the borrowing members."

Railroads.

The following gross and net railway earnings are reported for May:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Alabama Gt. South'n	$111,214	$110,464	$10,878	$17,055

* Deficit.

The Long Island Railroad Company has declared a quarterly dividend of 1 per cent., payable August 1.

The all-rail east-bound shipments of dead freight from Chicago last week were 64,816 tons, against 46,605 tons the previous week and 63,873 tons the corresponding week of the previous year.

The Nashville, Chattanooga & St. Louis Railway Company has declared a quarterly dividend of 1 per cent., payable August 1.

The Henderson Bridge Company has declared a dividend of 2½ per cent., payable August 1.

The Washington & Idaho Railroad, extending from Spokane to Cœur d'Alene, a distance of 158 miles, was sold here yesterday under foreclosure at Tekoa, Wash., to the reorganization committee of the Oregon Railway & Navigation Company for $1,615,740. This completes the purchase of all branch lines of the Oregon Railway & Navigation Company, and the plans of reorganization will now be rapidly completed and the receiver discharged.

The report of San Antonio & Aransas Pass for 1895 shows:

	1895.	1894.	Changes.
Gross	$1,971,828	$1,946,752	Inc. $25,076
Operating expenses	1,416,183	1,324,365	Inc. 91,818
Net	$555,644	$622,386	Dec. $66,742
Other income	1,294	----	Inc. 1,294
All income	$556,939	$622,386	Dec. $66,742
All charges and taxes	769,839	763,546	Inc. 4,293
Deficit	$210,900	$141,159	Inc. $69,741

The report of Houston & Texas Central for the year 1895 shows:

	1895.	1894.	Changes.
Gross	$2,388,714	$3,829,842	Dec. $441,128
Operating expenses	2,076,703	2,434,368	Dec. 317,665
Net	$1,312,011	$1,435,474	Dec. $123,463
Other income	9,211	----	Inc. 9,211
All income	$1,321,222	$1,435,474	Dec. $114,252
All charges and taxes	918,188	902,394	Inc. 15,794
Surplus	$403,034	$533,080	Dec. $130,046

The Illinois Central Railroad Company has declared a semi-annual dividend of 2½ per cent., payable September 1.

A Chicago dispatch to the New York *Evening Post* says that fair orders are being placed for cars. The Burlington has ordered 1,000 stock cars, 500 cars from the Wells-French Company and 750 cars from the Michigan Peninsular Car Company. The Illinois Central has contracted for 500 coal cars and 300 refrigerator cars. The Chicago, Paducah & Memphis is negotiating for 500 to 1,000 cars.

Stephen Little, the expert accountant employed last winter to examine the books of the Baltimore & Ohio Railroad Company, made his report on Monday to the reorganization committee. The report is comprehensive, and will be got ready for distribution among security holders as soon as possible.

Foreign.

A Buenos Ayres dispatch says: "A rich gold mine in the province of San Juan has been purchased by a firm of American capitalists. The deposits are very large. An American mining engineer, representing a syndicate in the United States, who has been investigating certain gold mines, states that the prospect of developing such resources is excellent in the provinces of San Juan, Salta and Catamarca. Especially with the aid of improved American machinery may the most favorable results be expected, says the engineer."

A correspondent of the Glasgow *Herald* writes: "The stories that have come from Japan as to the new navy have been so numerous, and sometimes so circumstantial, that one has to be very chary in accepting them. It may be remembered that it was said that Lord Armstrong's company had arranged to lay down works there; the terms even were given. I hear from a source in Japan that it may be relied upon that no such arrangement has as yet been arrived at. Indeed, the Japanese desire to establish yards themselves, and the Mitsubishi firm, one of the best known, will likely establish works at the mouth of the Minato river, which will be especially suitable for repair work, the position being of tactical advantage."

The International Express and Transportation Company of North and South America has recently obtained a concession from the government of Costa Rica, by which it will be permitted to do both a local and also an importing and exporting express business in that country. The concession is for a term of twenty-five years.

The Brazilian State Government of Minas-Geraes voted in the beginning of 1894 the foundation of a new city to replace Ouro-Preto, the ancient capital. "The decree provides that this city, which shall be called Minas, shall be finished in four years. The new city will be built in squares, on the American system, and will comprise all the most modern sanitary and other improvements. Several foreign firms have already obtained concessions for work in connection herewith. In a short time tenders will be invited for lighting the town and the laying down of electric tramways. Several hundreds of houses have still to be built."

The *Rubber World* says: "The largest rubber crop in the history of the Amazon trade was gathered during the season just closed, but this is no indication that the supply is becoming exhausted. On the contrary, new facts are constantly coming to light to point out a wider extent of the rubber forests than was formerly suspected. Every year, too, these forests become more accessible, either through new geographical discoveries or by additions to transportation facilities."

The government of Costa Rica is issuing a decree withdrawing its present system of currency and establishing a gold standard.

The French Chamber of Commerce, which was organized in New York some months ago, with Consul-General Bruwaert as honorary president, has been officially recognized by the French government, and it will now be an official medium of communication with that government.

The *Revue Scientifique* says: "The administration has just made known the first results of the census of Paris taken on the 29th of March. These results show a population of 2,511,955 inhabitants for the entire capital. If this figure be compared with that obtained five years ago (say 2,424,703 inhabitants), we find that the increase has been 87,250."

The London *Times* has made public a dispatch from Vienna saying that Emil Holub, the noted African explorer, has received details of the discovery of gold fields in the Orange Free State which rival those of the Transvaal.

It is stated at the office of the consul of Costa Rica in New York that the government of Costa Rica had passed an act removing the import duties and wharfage charges on paper, inks and other printing materials. The importation of printing machinery is at present free of duty. The duties on printing paper were previously 2c. per kilo, which is equivalent to about 90c. per 100 pounds. Publishers in Costa Rica have been urging the removal of the duties for some time.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Injunction—Pipe Line.

The New Jersey Court of Errors and Appeals has reversed the decision of Vice-Chancellor Bird granting an injunction preventing the United States Pipe Line Company from crossing the tracks of the Pennsylvania Railroad Company at Foul Rift, near Belvidere. This decision, it is understood, will permit the building of the pipe line across New Jersey and permit it to reach the seaboard as a competitor to the Standard Oil Company.

Shipment—Contract - Delivery.

The Supreme Court of Louisiana held, in the recent case of The Orr & Laubenheimer Company vs. Wilson et al., that ship agents and fruit dealers having contracted for the lease of a vessel for use in their business at a fixed price and for a definite term, deliverable about July 13, 1894, were not at liberty to recede from their engagement at will, and decline to accept delivery, if tendered seasonably; and having declined to accept delivery of the vessel when formally tendered to them on July 29, 1894, they had become bound to the plaintiffs as lessors in the full amount of the price stipulated in the contract, and that an effort on the part of the lessors, subsequently to the defendants' default, to use the vessel so as to reduce their damages to a minimum, could not be viewed as an acquiescence in their abandonment of their contract, which defeated plaintiff's recovery.

Carrier—Contract - Condition—Damage.

In the case of Eryesether vs. Great Northern Railway Company, recently decided by the Supreme Court of Minnesota, it appeared that the defendant contracted with plaintiff to transport live stock to a point beyond the line of its road, it having to deliver it to another and connecting road for transportation to its destination. The contract contained a provision that, as a condition precedent to his right to recover any damage for any loss or injury to said stock, plaintiff should give notice in writing of his claim therefor to some officer of the defendant company or its nearest station agent before the stock was removed from its place of destination or delivery, and before it mingled with other stock. It did not appear that the defendant had any officer or agent at the place of destination or delivery. The court held that under the circumstances the condition was unreasonable and void.

Partnership—Dissolution—Mortgage.

The Supreme Court of Indiana held, in the recent case of Davis vs. Niswonger, that a complaint averring that plaintiff and defendants were partners in the hardware business; that they executed a chattel mortgage which was foreclosed; that their property was sold to the mortgagee under an agreement that he should sell the same and account to the partners for any balance after paying the mortgage debt; that he transferred the property to defendant, who sold part of it for more than the amount of such debt, and retained such balance and the remaining property, was insufficient on general demurer. The court held that such a complaint failed to show any cause of action for the dissolution of the partnership in that it was already dissolved by the transfer of all its property; that, failing to show the existence of firm property, it showed no cause for the appointment of a receiver, and that since the sum which the mortgagee received upon transferring the property was not stated, it was not shown that any balance was due the plaintiff under the conditional sale, and the defendant must be presumed to have purchased such property from the mortgagee in good faith.

Warranty—Breach—Rescission.

In the case of Lynch vs. Curtman, recently decided by the Supreme Court of Minnesota, the court held that the submission by the court to the jury of the question whether the vendor warranted the quality of a chattel and the instructions of the court as to the effect of a breach of the warranty if one existed was erroneous; that the breach of a warranty neither rescinds the sale nor gives the vendee a right to rescind, but merely a right of action for damages; that where the vendor makes statements as to the quality of the article, but accompanied by an express and positive refusal to warrant it and a like notice to the vendee that he will not, and does not, warrant it, his statements as to quality must be deemed mere expressions of opinion and not a contract of warranty, at least in the absence of any fraud or deceit and where the property is present for the inspection of the vendee, and that the admission of certain oral evidence was not in conflict with the rule that the terms of a written contract cannot be contradicted or varied by contemporaneous oral evidence, the oral contract being upon an entirely different subject from that covered by the written one, although both contracts were parts of the same transaction.

Insurance—Stipulation - Ownership.

The Supreme Court of Georgia held, in the recent case of The Orient Insurance Company vs. Williamson, that where it was stipulated in a policy of fire insurance issued to a woman, covering a building described in the policy as "her one-story frame, shingle roof dwelling," that the policy be void "if the interest of the insured in the property be not truly stated therein," or "if the interest of the insured be other than unconditional and sole ownership," it was error, upon the trial of an action brought upon the policy by the insured, to reject a plea, offered in due time, alleging that when the policy was issued, the plaintiff was not the owner of the property, because she had previously conveyed the same to another by a fee simple deed, and that if the defendant had known this fact it would not have issued the policy, and that this was true, although the deed in question might have been made to secure a debt, its effect being to pass the title.

Sale—False Representatio

The Kentucky Court of Appeals held, in the recent case of Wright et al. vs McAlpin Company, that in an action to recover the purchase price of goods sold by plaintiff to defendants, the court did not err in allowing plaintiff to file an amended petition praying for the recovery of the goods upon the ground that they were obtained by false and fraudulent representations made by defendants as to their solvency, it being alleged that plaintiffs did not know of the false representations until after the filing of the original petition; that the fact that an assignment for the benefit of creditors had been made by the purchasers of the goods did not prevent a recovery, as the assignee occupied no better position than the assignors, and that while it might be that a summons should have been issued against defendants on the amended petition before a specific attachment was issued, yet, as all parties seemed to have been finally brought into court and defense was made, defendants were not prejudiced by the failure to issue a summons.

Note—Alteration—Materiality.

The Supreme Court of Georgia held, in the recent case of Winkles vs. Guenther et al., that where a change made by erasure and interlineation appeared in a written contract, it was not such an "alteration" as is referred to in section 2852 of the Georgia code if made before execution, but was such an alteration if made afterwards without the consent of the other contracting party; that the materiality of an alteration is a question of law for the court, while the time when and the intention with which a change is made in a written contract are questions for the jury, and that where suit was brought upon a promissory note which showed on its face that the amount originally written therein had been changed to a larger amount, and the defendant filed a sworn plea of non est factum, and also a plea alleging that, without his consent, the note had been "raised" in amount after he had signed it by one claiming a benefit under it with an intention to defraud the maker, the burden of proof was on the plaintiff to explain when and for what purpose the change was made.

Railway—Passenger—Accident.

The Supreme Court of Georgia held, in the recent case of The Western & Atlantic Railroad Company vs. Volls, that a person going to a flag station on a railroad at which there was no ticket office, for the purpose of boarding a train, was upon properly signifying an intention to get upon a passenger train which had actually stopped, entitled to the rights of a passenger; that where a train stopped at such a station and after an employee thereon had assisted some passengers to alight, started to move on, and the plaintiff then informed this employee of her desire to get aboard, and he thereupon signaled to the engineer to stop the train, which was done, the train stopping at a low place where it was difficult to mount the platform steps, and the employee then undertook to assist the plaintiff to get upon the train, it was, under these circumstances, a question for the jury whether or not the employee in so doing was acting within the scope of his duty, and that upon the assumption that he was so acting, the company was liable for injuries received by the plaintiff on account of a fall occasioned by the employee's negligence in rendering the assistance mentioned.

BUSINESS NOTES.

England's Manufacturing Supremacy.

According to a writer in a leading German newspaper England leads the way in the production of furniture, glass, carpets, wall papers, and all the other articles which go to make up the artistic and comfortable home, and nowhere are these goods more popular than in Germany. "From month to month," he adds, "we hear and see more frequently that English and American furniture, carpets and stuffs are imported wholesale and sold, that rich people fit up their houses in the English style—in short, that something like an Anglo-American fashion threatens us, in the same way as a French fashion long ruled us in the past." There are "English shops" in all the great towns, and the best and most costly English manufactures for household use "find a ready sale, because they are well made, because they are useful and convenient, and, finally, because they are artistic in design."

Growing Merchant Marine.

The report of the Navigation Bureau shows that during the year ending June 30, 1896, 709 vessels of 204,000 gross tons were built in the United States and officially numbered by the Bureau of Navigation, compared with 682 vessels of 133,000 tons for last year, an increase of 71,000 tons. Steam vessels built numbered 322 of 135,000 tons, compared with 283 of 75,700 tons for the previous year. Steel as chief material of construction has increased to 106,900 tons from 47,700 tons for the previous year. Nearly three-fourths of the steel tonnage was built on the great lakes. The tonnage built and numbered on the great lakes was 104 vessels of 92,000 tons, compared with 93 vessels of 38,000 tons for the previous year. This indicates the rapid increase in size of the vessels of the lake fleet.

New Deal in Borax.

The *Oil Paint and Drug Reporter* says: "Interesting developments came a few days ago, in the receipt of a prospectus of the Pacific Borax and Redwood's Chemical Works, Limited, an interest in which was offered to the British public June 22. The prospectus gives the output of borax of the American company for the three years ending August 31 as follows: 1893, 7,498,542 pounds; 1894, 7,341,832; 1895, 9,570,849, the figures showing conclusively that the lower prices of last year largely increased the consumption. If to the increase of 2,229,017 pounds for the year ending August 31, 1895, there be added 3,524,699 pounds increase in the import of borate of lime for the year ending June 30, 1895, all of which was practically imported after August 31, 1894, under lower tariff, we have an increase in the American consumption for one year of 5,753,716 pounds."

Iron and Steel Imports.

The following is a statement of the total quantities of iron and steel supplied by Great Britain, Germany and Belgium to the total imports of different countries in 1882:

	—*Imports of iron of all kinds from*—		
	England.	*Germany.*	*Belgium.*
Belgium	86,000	121,000	....
Holland	329,000	101,000	94,000
United States	1,192,000	125,000	30,000
France	205,000	122,000	115,000
Austria	6,000	118,000	....
Russia	164,000	109,000	21,000
Italy	107,000	60,000	39,000
Switzerland	....	46,000	....
Spain	32,000	30,000	42,000
Denmark	....	14,000	....
Norway	10,000	3,000	....
Sweden		4,000	....

"From the above figures it is clear that we (Great Britain) do not now meet with Continental competition for the first time. On the contrary, it is rather an old story, going even as far back as the last century, when we imported most of our bar iron from Russia, and most of our steel from Germany and Sweden."

Opportunities at Montgomery, Ala.

A Montgomery, Ala., correspondent writes to BRADSTREET'S as follows: "It should interest readers of BRADSTREET'S to know that Montgomery, Ala., offers great facilities for the manufacture of jeans, cassimeres and union goods suitable for fall and summer trade, and a shoddy mill would prove of great value, as there is no market here for woolen rags. A tannery and shoe factory could also be established to an advantage, and as Montgomery is the center for wholesale business in this section, and is a distributing point for most of Alabama, southwest Georgia, Florida and a part of Mississippi, a ready market would be found for all the above lines. All the necessary material is available, and labor can be had with the experts necessary to give instruction. Thousands of pounds of wool and hides which are shipped from here yearly could be manufactured into clothing and shoes at a small cost. Cotton goods are manufactured on a large scale, but wool appears to be overlooked. With practical heads the necessary capital could be raised with which to establish the woolen plant, the tannery and shoe factory, which are so much needed at this point."

Coinage of Pig Iron.

A Georgia man who says he is a 16-to-1 man, but does not want any halfway measures, declares that he accepts the arguments of the advocates of free silver and agrees with the remedy so far as it goes, but it does not go far enough. "I am in favor of the free and unlimited coinage of pig iron at a ratio of 16 to 1 by the United States alone, and can prove by the best authority that such a policy on our part will raise prices, put plenty of money in circulation, give the honest debtor a chance to pay his debts, thereby making the whole country prosperous." The writer proves by liberal quotations from Bryan and Senators Jones and Stewart that the free coinage of pig iron and the stamp of the government would make its bullion value the same as its mint value. "He also proves by the same authorities that there need be no fear of a contraction of the currency, for if gold and silver should be driven out by the baser metal there is plenty of pig iron to take their places and so give the people plenty of money. He declares that wages would be compelled to rise, because no man would be fool enough to work for $1 a day when he could make $1,000 a day picking up rusty nails and old horseshoes and taking them to the mint for coinage."

Street Railway Fares.

Extraordinarily low rates per mile are indicated by the distances for which a passenger may ride for a single five-cent fare, by the use of transfers, on some of the street railways, as may be seen in the following table compiled by the *Street Railway Journal*:

City.	*Track mileage.*	*Miles for 5 cents.*	*Rate per mile.*
New York	458	12.5	.0040
Chicago	760	15	.0033
Philadelphia	462	11.75	.0043
Brooklyn	393	18	.0028
Boston	275	9.9	.0051
St. Louis	335	15	.0033
Jersey City-Newark	175	8.25	.0060
Cincinnati	263	10	.0050
Milwaukee	159	9	.0056
Denver	212	11.5	.0043

"Brooklyn appears to take the palm by giving an electric railway ride of 18 miles for 5 cents, but Chicago beats this in the case of a steam road which carries passengers a straight trip of 21 miles for a single nickel, and goes to the expense of printing, selling, collecting and auditing a ticket for each trip also. But, taking the average distance traveled, street railway rates are not so remarkably low compared with those of steam roads, for an immense number of their fares are received for short trips of 1, 2 or 3 miles, for which 5 cents is a profitable rate, and passengers are constantly leaving and arriving on every run through a populous city. On the long runs the business would be done at a heavy loss were it not for the large returns from the short trips."

Russian Labor Troubles.

The London *Times* says: "About 40,000 factory hands are on strike in St. Petersburg, and many cotton mills have stopped work. The strikers maintain an orderly demeanor, and do not give any ground for repressive measures, although papers formulating their demands are frequently found in the courtyards and workshops. They demand the reduction of the working day from 14 to 12 hours, more time for the midday meal and extra pay. The movement is not confined to the cotton spinners. On Saturday about 3,000 cigarette makers also struck. The same has been the case at the machine and locomotive factories of the Nicholas Railway. There is no doubt that the movement has been got up by careful organizers, and the suspicion of influence from abroad is very strong. Two or three hundred have been arrested and will be tried for breach of contract, as the law compels both employer and servant to give a fortnight's notice. The Cossack with his whip has this time been kept in the background. Russians have hitherto prided themselves on the absence of any labor question in their country. This may have been the case, but the government has for years been forcing the development of manufactures and industries, and there are now hundreds of thousands of comparatively intelligent and disciplined workmen who are rapidly acquiring ideas of the rights of labor as taught abroad. For several years past strikes and disturbances have been on the increase in all manufacturing districts, but they have generally been kept as secret as possible. Socialistic and seditious pamphlets and appeals are circulated among mill hands in great numbers."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Nearly all general merchandise markets continue dull, and the volume of business is smaller than anticipated. Little or no disposition is shown to engage in new enterprises, both city and country merchants continuing to purchase with more than usual conservatism in view of the unsettled financial outlook and the low range of prices.

Bank clearings amount to $955,000,000 for the week, 3 per cent. less than last week. This is a decrease from the corresponding total in July, 1895, of 7 per cent., but an increase of 15 per cent. as compared with the like total in 1894. Contrasted with the corresponding aggregate in July, 1893, this week's clearings are 2 per cent. smaller, and as compared with 1892, 9 per cent. smaller. The more important decreases in prices for staples this week are for iron, steel, petroleum, cotton, lard and coffee. Total number of business failures in the United States this week shows an unexpected increase, 255, compared with 219 last week. When contrasted with the corresponding week in 1895, the increase during the past six business days is 41, and compared with the second week of July, 1894, the current week's increase is 43. During the corresponding week of 1893, however, in the midst of the panic, there were more than twice as many failures as this week.

Stock speculation at New York is dull and prices are slightly better after extensive liquidation and bear selling, which carried quotations below the Venezuela disturbance level of December. The reduction of the Treasury gold reserve by specie exports and gold hoarding to below $95,000,000 was effective in creating the decline. Gold-hoarding tendencies have apparently been exaggerated for an effect on prices. The disposition to rally was increased by the belief that banking interests are inclined to aid the government in an emergency, though reports of a bond issue are manifestly premature. The serious illness of the head of the Vanderbilt family is among the disturbing factors, but the increase of the short interest resulted in overselling and created a disposition to rally prices. Gold shipments for the week amount to $3,275,000, of which $2,000,000 goes out to-day. Foreign exchange is steady at 4 88¾ for demand sterling, and its advance was checked by the disposition of London to buy our stocks.

The iron and steel industry is less satisfactory than a week ago, with increased competition, further sacrifices in price and a decreased prospect for improvement in the near future. The trade generally is duller, and there are fewer sales. Production of pig during June was restricted about 35,000 tons. The like unfavorable situation continues in the woolen and cotton goods industries, and manufacturing lines generally, which continue marked by the same lack of demand which has been conspicuous for the past two or three weeks. Wool sales continue extremely slow, with prices west and at London above a parity with Atlantic coast markets. Unsatisfactory reports continue with reference to lumber, Philadelphia advices being that, in some instances, dealers have taken houses in payment.

Among more favorable features are relatively encouraging reports concerning trade at nine business centers, together with an improvement in quotations for wheat, Indian corn, oats and pork, and firm or unchanged prices for wool, sugar, lumber, leather and print cloths. Baltimore reports various jobbing lines doing well, but (as at St. Paul) with a tendency to defer placing orders until after election. Chicago and St. Louis agree that sales for fall delivery, while fair in some directions, will not equal the record for 1895. Rains have improved crop prospects in Washington. The week has been marked at San Francisco by the departure of a train load of fruit for London, a cargo of wheat for Australia, and two ships loaded with lumber for Europe. Crop prospects in Louisiana and in Texas have improved, particularly with reference to cotton, and country merchants are reported encouraged. Sales of dry goods and notions at Atlanta are about an average; those of shoes are heavier than in 1895, and the distribution of groceries is more active.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 2,963,000 bushels, against 2,167,000 bushels last week, 1,652,000 bushels in the corresponding week last year, 1,873,000 bushels in the second week of July, 1894, and as compared with 5,077,000 bushels in the corresponding week of 1893.

General trade throughout the Canadian dominion, more particularly in Ontario and Quebec, while not active, is less depressed than promised a week or more ago, the distribution of merchandise in some staple lines being fairly satisfactory for fall delivery. This is true with respect to jobbers at Toronto, Montreal and Quebec. Halifax reports the prospect for the codfish catch good, with the hay crop increased and the policy of both city and country merchants one of extreme caution. New Brunswick lumber operators report a good trade. Bank clearings at Winnipeg, Montreal, Hamilton, Toronto and Halifax aggregate $19,879,000 this week, a decrease of about 16 per cent. compared with last week, but only a trifling falling off contrasted with clearings totals in the corresponding week of last year and 1894 as well.

FINANCIAL.

The Money Market.

The New York loan market has been dull and without any marked features, in spite of the earnest discussion in financial circles as to what might develop in the situation under pressure of the silver agitation. Neither this, the rise in exchange, nor the withdrawals of gold, with the consequent drafts upon the Treasury reserve, have had any very appreciable effect. The sharp declines in stock market values seem, however, to have caused some disturbance of loans, though it cannot be said with any certainty that the liquidation witnessed this week was due, to any extent at least, to calling of loans. Call money on the Stock Exchange has ranged between 1½ @3 per cent., the bulk of the business being at about 2½ per cent. The demand for mercantile paper was slightly improved, especially from outside sources, but offerings are on a very limited scale, rates being a little firmer at 5@6 per cent. for double names. The overhauling of loans, consequent upon the decline of stock values already referred to, has created a little better demand for that form of accommodation, and Wall street interests in general are understood to be inclined, where it is possible, to make arrangements running well up to the close of the year. There is, however, little disposition in banking circles to encourage this class of business. The quotations current are 3@3½ per cent. for four months and 4@5 per cent. for longer dates.

Silver.

It is generally noted that the commotion which has existed in the security market and which is attributed in the main to the silver agitation, has been unattended by any activity of a decided kind in silver itself. The market for bullion here and in London has been steady to firm all week. The commercial inquiry fair, and the exports on the usual scale. The London price for bars has been between 31⅜d. @31½d. per ounce, while in New York the variations were from 68⅝c. up to 68⅞c. Trading in silver bullion certificates at the New York Stock Exchange was small, the total dealings being only 99,000 ounces at between 69¼ @68¾c.

N. Y.	68⅞c.	68⅝c.	68⅝c.	68¾c.	68⅞c.	69c.

Foreign Exchange.

Early in the week the exchange market was influenced not only by a scarcity of commercial or security bills and by a disinclination on the part of bankers to draw freely, but by the appearance of a very marked inquiry for exchange. The movement was closely connected with the apprehensive feeling in financial and business circles as to the agitation of the silver question and the political outlook in that relation. The inquiry for exchange was apparently from a number of sources, and it cannot be said that there was any sign of a general disposition to buy exchange as an investment or for speculation, or as a substitute for gold hoarding. The advance in rates was very marked. Posted quotations were marked up ½c. to 4.88@4.89 on Monday, and again on Wednesday to 4.88½@4.89½. The selling rate for bankers' demand sterling, which at the close of last week was 4.88, rose steadily under the inquiry and scarcity of bills described above till on Wednesday the quoted rates were 4.88¾@4.89. On this basis expectations of large gold shipments were of course created. On Monday last $375,000 was taken for export, and on Wednesday $900,000 more. The belief was that to-day's shipments would be very large. On Thursday, however, the renewed buying of stocks by London furnished considerable exchange, and gold bills were also offered, causing a better tone on the market, though demand sterling remained at 4.87¾ and the inquiry was sufficient to absorb all offerings. Friday's gold engagements amounted to $2,000,000 or a total of $3,275,000 for the week, and exchange at the close was dull and steady at 4.88¾.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

July 11.	July 13.	July 14.	July 15.	July 16.	July 17.

@	@	@	@	@	@
4.87¼	4.87¼	4.87½	4.87¾	4.88	4.88

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¼@4.89; commercial bills, 4.87; francs, 5.16¼@5.14⅜; reichsmarks, $95^{9}/_{16}$@$95^{13}/_{16}$.

The Bank of England rate remains unchanged at 2 per cent. The bank this week gained £294,000 specie, its proportion of reserve rising from 58.56 per cent. to 59.16 per cent. In the London open market discount is ⅝@$^{9}/_{16}$ per cent. and call loans ⅛@½ per cent.

Imports and exports of the United States for the month and twelve months ending June, 1895 and 1896 (preliminary figures for 1896, corrected to July 15, 1896):

Excess of imports	10,590,690	14,941,464

The following table shows the imports (exclusive of specie) at the port of New York for the week ending July 10, 1896:

	1896.	1895.
Dry goods	$1,623,956	$7,944,744
General merchandise	6,550,214	9,968,367
Totals for the week	$8,174,170	$12,913,111
Previously reported	253,005,139	267,756,085
Since January 1	$261,179,309	$280,669,196

The exports (exclusive of specie) from New York to foreign ports for the week ending July 14 were $497,790 below those of last week. The following

enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$6,871,283	$6,540,634
Previously reported	201,406,900	179,826,059
Since January 1	$208,278,173	$186,366,693

The New York Banks.

The bank statement for the week ended last Saturday, issued by the clearing house, was remarkably consistent in its details. The items reflect considerable flow of money from the interior, increasing the total reserves over $3,000,000, most of which amount was in legal tenders. Loans increased $953,000, and the gain in deposits of $4,400,000 corresponds closely with the change in cash and deposits. The effect of the other changes was to increase the surplus reserve $1,909,000, the figures of the statement comparing as follows with those of the preceding week:

	July 3, '96.	*July* 11, '96.	*Changes.*	
Loans	$476,199,300	$477,152,900	Inc.	$953,600
Specie	61,866,300	61,950,800	Inc.	84,500
Legal tenders	83,223,700	86,158,500	Inc.	2,934,800
Deposits	499,046,900	503,488,100	Inc.	4,441,200
Circulation	14,556,900	14,595,800	Inc.	38,900
Total reserve	145,090,000	148,109,300	Inc.	3,019,300
Reserve required	124,761,725	125,872,025	Inc.	1,110,300
Surplus reserve	20,328,275	22,237,275	Inc.	1,909,000

At the corresponding date a year ago the surplus reserve was $33,405,300, against $73,941,375 in the corresponding week of 1894.

The Boston Banks.

	July 11, '96.	*July* 3, '96.	*Changes.*	
Loans	$162,027,000	$162,342,000	Dec.	$315,000

THE STOCK MARKETS.

The New York Stock Market.

Demoralized conditions have prevailed to a greater or less extent in the New York stock market during the present week. The decline in prices has been, in some instances, severe, and few portions of the list escaped the effects of the combined liquidation and bearish selling. The word "pannicky," however, could scarcely be said to apply, although the average level of prices reached on the decline has been quite as low as that during the Venezuela break last December. The main cause of the downward movement is, of course, the uncertainty of the political outlook, and the fear aroused by the importance which the silver agitation has now assumed. All public interest in the stock market has disappeared, and professional operators and other holders of stock, after the many disappointments and prolonged waiting to which they have been subjected, have been naturally inclined to throw over their securities. Bear professional interests in the market have taken advantage of this opportunity and conducted an aggressive campaign, which was made more successful by a number of incidents, including the advance of exchange and renewed gold shipments to Europe, while the reduction of the Treasury reserve and the apparently exaggerated talk of hoarding gold also created distrust and uncertainty. Another incident not without disturbing effect, was the serious illness of the head of the Vanderbilt family.

As already indicated, the public has been out of the market, except where they liquidated. On Thursday, indeed, some purchases, particularly of fractional lots at the extreme decline, might be attributed to the investing element, but this tendency was not sufficiently marked to have any important effect. London, which was inactive and apparently suspicious of our market during the early part of the week, came in as a large buyer on Thursday, and its purchases, together with the buying by the rather exaggerated short interest, turned the market on that day and resulted in a substantial rally. On Friday the market was inactive and generally steady, large speculators apparently taking no part and the smaller element being inclined to wait for developments. The fact that gold shipments for to-day fell below the expected amount had considerable effect in this connection. During the entire week the professional character of the Stock Exchange business and the absence of any public interest kept the market from exhibiting any signs of extreme tension, although throughout the whole period the feeling was most nervous and the movement of stocks irregular in the extreme, the temper of speculation responding with great rapidity to any unfavorable news or rumors whatever. The political developments in connection with the reception of the Chicago platform and ticket have apparently been the object of the street's most earnest attention, although the condition of the Treasury reserve and the fear of the further depletion with the possibility of another bond issue have been among the principal elements in producing the disturbance of values, and it may further be noted that a mere rumor indicating that leading banking interests had been consulted in regard to the furnishing of gold to the Treasury was very effectual in causing Thursday's rally. Government bonds were a feature, the new 4s which were quoted at 116⅜ at the close of last week ran off to 112¾ on transactions aggregating $500,000. On Friday the price rallied to 114, but closed at 113½ bid. Bond dealers do not, however, admit that the decline represented any liquidation by real holders of governments, but ascribe the selling to speculative holders, who either obtained the bonds at the time of the last allotment or purchased them on the subsequent decline in anticipation of a substantial advance. The declines in the general market since last Saturday were distributed throughout the entire list and were in some cases very severe, one of the features being the rapid drops between sales, which occurred even in prime investment and dividend-paying securities. This could indicate only one thing—the total absence of buying support. It was certainly very evident in the speculative securities which have been under manipulation by bull cliques or inside interests, and the same process could be seen in many different securities. The increase in the short interest was, however, equally prominent, and to this feature, with the large London buying already noted, the partial rally and steadier tone on Friday may be ascribed.

Boston Stock Market.

There has been more excitement in the market, with transactions increased and general values lower, nearly every active stock feeling a decline to Thursday night. Atchison closed 3½ points lower, with Chicago, Burlington & Quincy down the same amount, while Mexican Central and New York, New Haven & Hartford Railroad went off 1 and 2 points. Boston & Montana sold down 2 points under quite steady trading. Sugar met with considerable attention on a declining market, 35,000 shares changing hands during three days. The decline was a trifle over 3 points. Bay State Gas has been active, but closes lower, while United States Leather preferred declined 8½ points.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending *Price July 16, 1896.*	*Price July 9, 1896.*	*Sales July 16, 1896.*	*Sales July 9, 1896.*

MODERATE DEMAND

FOR STAPLE MERCHANDISE IN NEARLY ALL LINES, AND LITTLE PROSPECT FOR EARLY IMPROVEMENT.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, July 17.—The market for merchandise continues dull, with no life in any department. The money market remains very quiet, with plenty of funds on call, and there is apparently no disposition to lower rates on either long time contracts or mercantile paper. The very highest grade of mill paper with commission house endorsements will pass as low as 4@4¼ per cent., but business paper mostly selling at 4½@5½ per cent. The boot and shoe trade is quiet, but the market is steady and the factories, as a rule, are well supplied with present business, some houses having orders to last until September. Leather is dull, but prices hold steady, with conditions unchanged. Hides are firm, with offerings small, but the eastern demand is light.

Philadelphia, July 17.—Wool is fairly steady with light sales, manufacturers are buying only for immediate use. Dry goods continue dull. Grain, drugs, paints and glass are all inactive, and collections are slow. Lumber has improved a little. Those willing to shade prices and take houses in payment seem to be busy. Tobacco is a little more active. Demand for Havana has fallen off as the majority of manufacturers have been buying steadily all along and have now as much stock as they can afford to carry. Iron shows no improvement, and the future is uncertain. An effort is being made by pig-iron manufacturers to organize to regulate prices, probably through restricted production.

Pittsburgh, July 17.—Local trade continues dull in all lines. Demand for staples is confined to orders for present needs. Some complaint is still heard as to collections, and business generally does not appear satisfactory. The iron market has been very dull, and fewer sales are reported than for some weeks past, and the outlook does not seem promising for any immediate revival in this line for some time to come.

Baltimore, July 17.—Jobbers in the various lines report orders coming in fairly well, although there appears to be a tendency to defer placing orders owing to the uncertainty of the outcome of the election in the fall. Collections very slow.

West and Northwest.

Cleveland, July 17.—General business continues quiet and unchanged.

Cincinnati, July 17.—Business is dull, money plentiful, and collections difficult.

Detroit, July 17.—General business is not up to anticipations even at this dull season. Collections are slow. Crop yield is reported of good quality and up to the average of recent years. The money supply is equal to the demand, which is fair.

Chicago, July 17.—There has been no decrease in the general jobbing trade during the week, and business is fair for the season. Sales of dry goods, clothing and shoes for fall delivery are being made to a liberal extent, but merchants hardly expect to have them exceed last year, owing to the unusually low prices prevailing for grains and the unsettled condition of political and financial affairs. Stocks of leather are not large and the trade is dull, but prices are well maintained. There are no new developments in steel, the features being the continued scarcity, and small size of the orders received. The lumber trade is slow, with an easy feeling and good stocks. The produce trade is dull. Potatoes and apples are lower, but other articles show no material change. Wool receipts 2,644,584 pounds. There is no disposition to start new enterprises. Collections are slow.

St. Louis, July 17.—There is no change in the general situation. Although aggregate sales of staples are satisfactory, country stocks are low, and despite the excellent crops the immediate outlook for a betterment is not more than ordinarily encouraging. Pig iron shows increased activity in a moderate way, but consumption is light. Barbed wire is moving slowly. Prices for lumber are unchanged, but the movement is less than for some time. There is nothing doing in hides, and stocks are heavy. Leather is firm and sales small. Wool is quiet and steady. Values are well maintained in steel and iron, the demand being fair for the season. Bankers say counter transactions are liberal considering the unsettled condition of affairs throughout the country.

Kansas City, July 17.—Jobbers and retail houses report fair sales on staple articles. Country buyers are very conservative and only making filling-in orders. Collections are slow.

Milwaukee, July 17.—Trade throughout the state is reported as quiet, and there seems to be but little activity in the movement of merchandise. Jobbers report collections slow.

St. Paul, July 17.—The only new feature noticeable in the condition of trade this week is the disposition shown on the part of some dealers to put off placing orders for winter goods. There is a fair business in such staples as groceries, hardware and drugs, but with the exception of the latter those show a falling off. Collections are fair.

Minneapolis, July 17.—Trade conditions are unchanged from last week.

Duluth, July 17.—In most lines of trade midsummer dullness prevails. Reports from the country are somewhat conflicting as to the crop situation. Grain shipments are lighter and rates unchanged.

Omaha, July 17.—Trade in all lines is quiet. Collections are dull.

Sioux Falls, July 17.—Trade in general, both wholesale and retail, is quiet. Travelers selling winter goods report fair sales, but a tendency on the part of retailers to wait.

Southern Cities.

Charleston, July 17.—The week closes very quiet in all lines. Collections are complained of. Crop prospects continue good except on the bottom lands where freshets have destroyed a good deal of corn.

Savannah, July 17.—Trade for the week is fair. Collections are fair, good for past three days. Naval stores receipts are light, shipments heavy, demand good and tone firm.

Atlanta, July 17.—The dry goods and notions season is just opening, and sales are reported well up to the average. Boot and shoe sales are reported above last year. Groceries are doing well. Hardware generally is quiet. This is the off season in collections, but they are generally reported up to expectation.

Augusta, July 17.—No change is noted in general trade conditions. Collections are reported slow. Cotton is looking well, and will be marketed early.

Jacksonville, July 17.—Collections are coming in better, otherwise there is no change.

Birmingham, July 17.—Comparing with last month, trade is a little off and still inactive, with no immediate prospects of improvements. Collections are slow.

Chattanooga, July 17.—There has been no material change during the week.

Nashville, July 17.—Trade remains quiet in all lines. Country collections keep up well for the season. No specially new features are noted in business in this section. Conservatism is observed in city and country.

Memphis, July 17.—General trade remains quiet, though good for the season. Collections are fair.

New Orleans, July 17.—Crop prospects are improved. Country orders show some increased demand extending to most lines. There is not much doing in cotton. Sugar is dull, but rice is again firmer.

Galveston, July 17.—General rains have insured a good cotton crop. Merchants are feeling much better.

Pacific Coast.

San Francisco, July 17.—The movement of merchandise in most lines is inactive. A train load of fruit has been shipped to London, and another is being loaded. Two ships loaded with lumber left for Europe, another with wheat for Australia. Collections are not improved. Hides and tallow are dull.

Portland, July 17.—There are no new features in trade this week. Warm weather has stimulated retail business in some lines, but jobbers generally report a dull market. As yet little wool has come to The Dalles, Ore., although there have been buyers on the ground. Collections in general are but fair.

Tacoma, July 17.—Late rains have much improved crop prospects. Arrangements have been made to start up a woolen mill here which has long been idle. General trade is up to expectations, though light.

Seattle, July 17.—Retail trade is quiet, owing to this being the vacation season, but jobbing trade is fairly active considering the season, and is ahead of this time last year. Reports of damage to crops are exaggerated. The yield will be larger this year, owing to increased acreage. Heavy rains this week have improved its appearance.

Canada.

Toronto, July 17.—General trade is fairly satisfactory. The movement is chiefly in seasonable goods, but there is a better disposition with regard to placing orders for autumn and winter goods.

Halifax, July 17.—There is not much activity in general trade. The markets continue quiet in lines of breadstuffs. Codfish is abundant on our shores, and the prospects for a large catch are good. Collections show some improvement. Recent rains have been a great help to the hay crop, which promises to be larger than last year. St. John, N. B., reports dullness in business. The lumber operators all over the province appear to be having a good season. The weather has been favorable to the crops, which are now making rapid progress.

Montreal, July 17.—A little more activity is noticed in general trade. Still, midsummer dullness prevails to a large extent. Contrary to earlier reports, the hay crop promises to be up to the average. Quebec reports business slightly improved, with room for improvement in collections. A cautious policy is everywhere apparent, and retailers are only buying lightly for fall.

Dry Goods.

Business continues slow in all departments, with general conditions not materially changed. The curtailment of production in cotton fabrics continues, but the surplus supply on hand is large and values yet rule low. Raw cotton is declining, but the surplus stock of the raw material is light, although the coming crop gives every indication of being a large one. Printed fabrics for fall are being generally opened in dark styles, although the warm weather should keep up a fair call for light goods. Ginghams are quiet, with conditions unchanged. Dress woolens are dull with mill agents, and little new business is being picked up. Jobbers report a slow trade. Men's-wear woolens yet rule slow. Spring samples are ready to be shown, but clothiers have manifested little interest in them as yet. An attempt to open them will be made soon.

Cotton.

The exports of raw cotton during June and the ten months ending June 30, 1896, with comparisons for similar periods in 1895, were as follows:

JUNE.

	Bales.	Pounds.	Values.
1896	136,567	68,130,694	$5,210,160
1895	167,588	83,950,975	5,574,131

TEN MONTHS ENDING JUNE 30.

1896	4,560,065	2,285,643,058	$186,835,746
1895	6,783,721	3,427,897,026	198,325,388

Wool.

The market continues very dull, and sales are yet confined to sample lots and small parcels that happen to be needed. As buyers require supplies they are paying about former rates, but to induce any purchases of lines further concessions would have to be made. With the London market firm and wools costing there about 10 per cent. above the parity on this side, importers are firm in their views, while the high cost of supplies maintained at the western interior markets prevents holders at the seaboard from being disposed to cut prices on domestic wools any more to make sales. Manufacturers will buy wool when they are able to sell their goods, but until orders come in for the latter they are not attracted by the low values for raw material that prevail. The London wool sale closes July 21. Carpet wools are quite firm abroad, but attract little attention on this side.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JULY 4, 1896, TO JULY 10, 1896, INCLUSIVE.

THE THEORETICAL 21 SHILLINGS.

The London *Westminster Review* says: "In England, at the beginning of the eighteenth century, although gold and silver were coined in unlimited amounts, all the good silver disappeared from circulation as soon as it was issued, and the whole question of the coinage and the relation between gold and silver was referred to Sir Isaac Newton, at first warden and afterward master of the mint. He pointed out that the guinea, although it had been originally intended to represent 20s. only, was, by a Treasury warrant then in force, passing current as 21s. 6d., but that its real value, according to the market value of the metals, was only 20s. 8d., and he recommended, as a tentative measure, that it should be reduced to 21s. At this value the theoretical guinea has remained ever since. It was still, however, overrated by 4d., and silver still continued to disappear from circulation. The explanation of this problem, which has puzzled financiers for so many ages, is really extremely simple.

"When a guinea in gold, worth in the bullion market only 20s. 8d, was allowed to circulate together with a guinea's worth of silver, worth in the bullion market 21s., and a man was allowed to pay his debts in which of them he pleased, he naturally chose to pay his debts with the golden guinea, worth only 20s. 8d. The guinea's worth of silver, worth the full 21s., he preferred to keep in his pocket, or to export at its full value, or to sell to the dealer, who would melt it down into bullion. By being coined it was actually lowered in value, and put on a par with a guinea worth only 20s. 8d. It became, therefore, an established custom among merchants that all obligations should be settled in gold.

"A century later, viz., at the great recoinage in 1816, what had been an established custom was enacted by law. Gold was adopted as the sole standard of currency, and silver and bronze have been coined only in limited amounts, silver being made legal tender up to 40s. and bronze up to 12d. The reason, then, of 240 pennies equaling a pound has wholly passed away, while the inconvenience of such a proportion survives, and is for us now to abolish. We all remember with what ability and ease Mr. Goschen a few years ago called in the foreign bronze coins that were flooding the country. The automatic machines reaped a splendid harvest for themselves, while they were of the greatest assistance to the Chancellor of the Exchequer in collecting the foreigners, by dealing out smeetmeats, cigarettes, 'your correct weight,' and other luxuries, when numberless foreign coins, instead of English pennies, were dropped into the slots. No doubt something of the sort will come to the rescue when it is required to call in English pennies themselves."

THE CANNED GOODS TRADE.

A Baltimore exchange says: "The canned goods trade of this city (Baltimore) is in a very unsatisfactory condition, and those interested in the various branches of the business do not look very favorably on the future. The entire pack of corn and tomatoes last season, which are the leading staples, was small compared with that of the preceding year, but the demand fell flat, and even under the decreased production these goods are reported to have dragged heavily throughout the winter, and prices got down to the lowest known during the past seven years. A well known representative of the trade stated yesterday that the dullness in the business was almost entirely due to the depressed condition of the working classes throughout the west, southwest and northwest, where the greater portion of the pack of this state goes into consumption. During the season of 1895 standard corn sold at an average of 50c. per dozen, but the average price for the same class of goods was from 2½c. to 5c. lower during the past winter. Tomatoes sold at 55c., as compared with 60c. in the year previous, but are now doing slightly better, as the supply is rapidly decreasing. These prices, it is stated, do not more than cover the actual cost of packing the stock, including cost of cans, boxes, labeling and handling. It is due to these stringent conditions that a number of long-established packing houses have been financially embarrassed during the past two years. Owing to the low prices of canned goods, but few packers in Harford county, New Jersey and New York will operate during the present season, and a very small pack is anticipated. Authorities on canned goods state that tomatoes cannot be put up and marketed at less than 75c. to gain any profit, and from 60 to 65c. for corn. In 1892 corn sold as high as $1.25, and, although all other products used in packing were higher, very fair profits were obtained. Three-pound tin cans then sold at from 3 to 4c. each, while now the prices range from 1½ to 1¾c. Canned peaches are now selling at about 75c., but during the winter went as low as 50c., while five years ago they brought 90c. Apples and smaller fruits are comparatively low, with but little demand from any source.

"The cove oyster trade has been dropping steadily since 1889, and no profit of any consequence has been gotten out of each year's pack during the period intervening. In the seasons of 1889 and 1890, the pack of cove oysters each season amounted to about 3,750,000 bushels, while last year's pack barely reached 1,250,000. The prices during a normal season have ruled at $1 for standards and $1.55 for seconds, the prices now being obtained are 70c. and $1.30 respectively."

COMPETITION WITH BRITISH TRADE IN GUATEMALA.

A correspondent of the *British Trade Journal* writes to that paper as follows: "I have much pleasure in forwarding to you some figures in reference to the Guatemalan foreign trade during last year. I give below a table which shows the total value of the imports, specifying the principal countries where the goods came from, and comparing the results of four different years:

	1883.	1891.	1894.	1895.
Great Britain	$827,574	$1,837,395	$1,680,045	$1,530,439
United States.....	529,467	1,524,673	1,803,955	2,627,043
France	149,687	899,535	465,531	856,634
Germany	128,296	1,067,269	918,704	1,643,209
Other countries ...	685,544	2,537,958	2,069,363	1,124,998
Totals.....	$2,420,568	$7,866,730	$6,937,598	$7,782,325

"Now, when so much is being written about the competition of the leading nations of the world, it is well to look at these figures. They clearly prove, though in a small measure, that Germany, above all, is beating England in some quarter or other; for, whereas, the former had a very insignificant fourth place in the Guatemalan markets up to 1883, it occupies at present a strong second, England having fallen to the third rank in a market where, in years gone by, it used to be foremost. The United States have not made so long a stride, but they also have attained a good position. The reasons of this change are, in the main, two—(1) there are many German merchants in Guatemala, and (2) there are German steamship lines plying between Hamburg and Bremen and the ports on the Pacific slope of Guatemala. The Guatemalan consuls in England have made disinterested representations on this subject to British companies, but to no purpose whatever. The exports from Guatemala were as follows:

1883.....	$5,718,341	1894.....	$20,324,589
1891.....	14,175,392	1895.....	26,534,394

"Thus it will be seen that the trade of the country is very rapidly increasing. The railways, which will be finished in two years, are likely to treble it in a short time, and the government expect that the exhibition next year will foster the interests of all concerned."

EFFECT OF FREE COINAGE.

A dispatch from Washington to the *Herald* gives an interview with Director of the Mint Preston on the effect of free coinage. He said: "I can only explain generally what the routine would be, based on experience gained before the repeal of the Sherman law, and upon what free coinage of silver is generally interpreted to mean. In the first place, silver in any form, if not too base for the operation of the mints, will be received from anybody and coined into silver dollars or bars free of charge, except the cost of the alloy employed, which is two cents per ounce.

"The word 'unlimited,' as used in the Chicago platform, means that there shall be no restriction as to the amount of bullion permitted to be received and coined. Unless by legislation the coinage of silver should be limited to American product, our mints would be open to all the silver in the world, and it may safely be stated that, without such a restriction, the United States would, within a few years, have the surplus silver of the world. By surplus I mean all the silver not used by other nations as subsidiary coin.

"Under a free-silver law any one possessing old silver spoons, silverware, or anything else containing silver, would have the privilege of taking such articles to the mints and having them coined into silver dollars. It is not to be expected, however, that the mints will be called upon to perform work of this character. It will be the smelters and refiners who will do most of this work.

"There is a mistaken notion as to the class of people who take bullion to the mints to be coined. It is generally supposed that mine owners do this. As a rule they do not. Their work is confined to taking ore from the mines and selling it to the smelting and refining establishments. There are about a dozen of these establishments now in operation, and, with a free-coinage law, of course the number will greatly increase. From these establishments would come 90 per cent. of all the bullion that would be sent to the mints to be coined.

"It is not to be presumed, however, that under a free-coinage law a person presenting bullion would have to wait for his money until the material which he had presented had actually been coined. All that will be necessary will be to wait until the actual value of his bullion is ascertained. Nor is it to be presumed that any great number of people will go to the mints for their silver dollars. The chances are that you will not find any more cart-wheel dollars in circulation under a free-silver law than there is now. The coin is too cumbersome. The people may want free silver, but they would rather have a government paper equivalent for it than its actual weight in metal.

"At the present time the value of silver in the markets of the world is about thirty pounds of the white metal to one of gold. Our people would, therefore, under the ratio of 16 to 1, have 53-cent dollars, which might circulate for their face value in the United States, but which would only be accepted at their bullion value abroad.

"Unless Congress enacts some special provision preventing it, the nations of the world, in case a free-coinage law is placed on the statute books, can ship all their bullion to the United States for coinage. Here it will receive the government stamp, and will be used to buy American goods for shipment abroad. The result will be that foreigners will get all American goods at half price, while Americans will have to pay the full rate for them.

"There is this danger of our trade being injured. At present silver is admitted free of duty in the United States. Treasury officials say that unless Congress placed a high tariff on the white metal, so as to prohibit its importation, the nations of the world would make the United States the dumping ground for their silver, retaining only a sufficient quantity of the metal in their circulation to act as subsidiary coin."

TRADING IN FUTURES.

Our old friend, the *Northwestern Miller*, says: "It takes a strong man and a courageous one to reverse an opinion to which he has previously committed himself, and Mr. Smith" (of the Toledo Produee Exchange) demonstrates that he is such a man. He differs from most of the old supporters of "future trading in being manly and frank enough to come out squarely and go on record as being opposed to what he now realizes is a wrong principle. Many another former enemy of anti-option legislation, learning the lessons of the last few years, has suffered a change of heart. Few of them, however, are willing to openly acknowledge it. That anti-option sentiment has gained enormously since the Washburn bill was defeated, among people who count—millers who depend for a living on flour making and not wheat speculation, grain handlers who handle grain and not wind, flour buyers guiltless of 'taking flyers,' and commercial journals not dominated by gamblers—is undoubted. The *Northwestern Miller* stands now, as always, unalterably opposed to the present system of dealing in futures, and it is gaining friends daily for its view of the case. It supported the Butterworth bill and stood alone among trade journals in its advocacy thereof. It favored the Washburn bill, later, believing it to be not a perfect, well-finished, practical measure, but a long step in the right direction. It took its stand in defiance of commercial opinion as at that time overwhelmingly expressed.

"Such journalistic wiseacres as BRADSTREET'S, ignorant of the true workings of future trading, because ignorant of all western grain manipulation (and in the west—not in New York—the iniquitous system was and is doing its worst work), such theoretical reasoners as this opposed anti-option legislation bitterly. We can not recall a single trade journal which was independent of exchange influences enough to favor the Washburn bill. As a matter of course, all the milling journals except this were against it, but these, naturally enough, had no weight. The grain men fought it, the millers, almost without exception, opposed it, and the bankers, coached and put into line by powerful grain and milling interests, protested against its passage most vehemently. All the commercial bodies handling wheat or flour resolved against it, appointed committees to go to Washington and fight it and stood firm in their strenuous protest against any interference with their precious privileges. The daily press was almost unanimous in opposing it, and the gambling fraternity, the frequenters of bucket shops and the broken-down hangers-on to the fringe of speculation, howled and shouted against it, making up, altogether, a large commercial army, headed by the grain men, the millers and the banks and followed by the newspapers and the rabble generally.

"The bill was killed, and great was the exultation thereat. The tickers ticked merrily, the wheat pits sang together in joyousness, the wheat men smiled, the bankers rubbed their hands gleefully, expectant of increased profits, the millers were complacent, the trade press congratulatory, the daily press self-laudatory, the exchanges satisfied, the gamblers happy, and the poor, fragmentary human remains which infest the bucket-shop thought that, at last, they had done something truly great. The Washburn bill was dead! There was to follow an era of tremendous activity and profit, and everybody would be on the right side and have money to burn.

"Some way, the prosperous era in wheat and milling circles delayed its coming. Various reasons were given for this, but among them, fortunately, could not be named a curtailment of option privileges. These were untrammeled, unchecked and abundant. The market was free of all threatened legislation. It was left to take its course, in obedience to that lovely principle of which we heard so much when the Washurn bill was under discussion—the 'principle of supply and demand'—that is, the gambler's idea of supply and demand, whereby, for the natural commodity, was substituted an imaginary one. Wind wheat was permitted to go ahead and work out its beautiful destiny. It has done so, and the farmers, the millers, the legiiimate grain handlers and the bankers have paid its cost in tears and treasure. Having destroyed its usual prey, the demon of option trading has turned on its own children and eaten them. Even the speculative exchanges have been reduced to the last gasp, and still we have unlimited and unchecked future trading.

"Finally, and at last, men who think and reason, and who have something still left to protect against the option fiend, are beginning to admit their mistake and are coming to believe, with the *Northwestern Miller* and the advocates of reform, that future trading in wheat is the chief cause of the trade's condition—the ruin of legitimate business. The banks have learned their lesson and paid for it dearly. As the receding wave of financial ease went out, it uncovered, one by one, the enterprises which had erstwhile floated gaily on the sea of commerce and showed the holes in their construction. As they foundered, the banker ruefully observed that wheat speculation, the privilege of which he had mistakenly defended with all the strength of his influence and power, was responsible for the leaks. Of all the flour-mill failures which have occurred since 1893, scarcely one but can be traced, for the cause of its downfall, to the privileges of the option market. The bankers were misled into supporting that which, had they really known it, was the most frequent and potent cause of failure and loss in existence, and, therefore, their worst enemy. The banks which have survived will scarcely object to an anti-option bill to-day. The millers have seen their industry made the sport of Chicago wheat gamblers, and they have learned their lesson. The wheat men have seen their profits dwindle under the present system, and they do not defend it very vigorously."

THE FOREIGN TRADE OF SOUTH AMERICA.

A special correspondent of the Philadelphia *Ledger*, at London, writes that journal June 24 in part as follows: "During the last week or two a modest little paragraph has been circulating throughout the English trade press, to the effect that a body of American gentlemen (most or all of them being practical manufacturers) are going to take an extended trip through Argentina, Uruguay and Brazil. The significance of this journey is accentuated when we learn that the governments of the respective countries named above have expressed a wish for the visitors to prolong their stay and to make the fullest investigations as to business prospects. This information has aroused deep interest among our exporters and manufacturers. Nothing that transpires in the United States, so far as it relates to acquiring fresh markets for trade, passes unnoticed in London and other principal commercial British centers, and the evident anxiety of the Argentine and other governments that the Americans should visit them adds to the prevailing uneasiness. The idea is that there is something behind it all, and just what that 'something' is, we all want to know. You will doubtless remember that a body of English iron manufacturers and operatives recently paid a visit to German manufactories with, of course, the object of finding out their cheaper methods of production, but that visit does not appear to have been at all beneficial to this country, and has only

brought forth a lengthy report of facts which we all knew before. But the visit of the American manufacturers is quite different, as it is understood they are not going to pry into anyone's method of production, but rather to bring the merits of American goods before the people of the respective countries, and to ascertain how such goods can best be introduced there.

"I may as well say here that it is becoming a recognized fact in commercial circles in England that America and England are destined to be the two greatest commercial rivals, and when the United States abolish their tariff barriers your manufacturers will be able to meet and beat England in practically all the neutral markets, and will certainly reign dominant in all those countries which geographically belong to her. As the principal of a great exporting house here said to me the other day: 'I pray that America will retain her protective tariff, because on the day she abolishes it our supremacy in foreign markets is doomed.'

"Now as regards the future. American manufacturers ought to do a much larger trade in all the lines mentioned above. Hardware of the United States make is considered by South Americans to be the best imported, while your sewing machines are unexcelled by any European makes. The South Americans object to European machinery because of the great amount of iron used in its construction, which makes it uselessly heavy. This is particularly the case with locomotives, the European being hard to handle as regards starting or stopping quickly, while the American do not have these disadvantages, and can pull greater loads up heavier grades, and are also much easier to put into order than those of English make. They are also more economical fuel consumers. Perhaps it is these advantages which account for the fact that quite half of the locomotives employed on Brazilian railroads are of United States make. The street cars in Brazil are all of American manufacture. American makers of wood-working machinery should do much more trade than is at present the case with the South American nations. Some United States houses do a considerable business in this line, and there is plenty room for others. Watches, mining machinery. artisans' tools of all kinds, galvanized roofing, dress goods (except white), etc., are all in active demand in the countries which will be visited. As regards dress goods and gray shirtings, I may say that the American article, being free from the starch and gum common to the white muslins of Europe, are much better, are preferred by the higher class of buyers, but European imports are cheaper, and sell among the lower orders. American manufacturers of these goods should pay attention to styles and widths.

"But I would impress upon the readers of this journal the absolute necessity for quicker and cheaper means of transportation. Given that you have the South American trade in your hands and can underbid all Europe. You must also have branch houses and not mere foreign agents, keep a good and comprehensive stock on hand, and let all your salesmen there speak the language fluently, and practically understand the lines they sell, most particularly when it comes to machinery. Extra banking facilities should not be omitted. With a good intercontinental American railway and a quick line of steamers trading direct from United States ports to South America, and with the other advantages mentioned above, there is really nothing to prevent the United States manufacturers from getting and holding the market. When that time comes our own exporters will have to seek fresh fields for their enterprise, although no one can tell them just where to look."

RAILWAY PASSENGER TRAFFIC.

The London *Iron and Coal Trades Review* says: "In view of the greater facilities that are being afforded in this country to passenger travel, and especially the arrangements made within the last week to run corridor trains to the north, and to give 1,000-mile tickets at reduced rates, it will perhaps interest my readers to know the numbers who travel by railway in continental Europe. Signor Bodio, in a recent report to the railway tariffs committee in Italy, gave the following detailed figures as to the mileage and number of passengers on the principal railways of Europe:

Country.	*Mileage.*	*No. pass. per annum.*	*No. pass. per 100 of population.*
Germany	26,250	483,000,000	978
France	23,750	305,000,000	796
Great Britain and Ireland	20,625	864,000,000	2,282
Russia	18,100	33,000,000	33
Austria	9,375	85,000,000	355
Italy	8,750	51,000,000	171
Hungary	6,850	37,000,000	214
Belgium	2,875	87,000,000	1,426
Switzerland	2,185	37,000,000	1,259
Holland	1,875	33,000,000	726
Roumania	1,500	5,000,000	95

"With the exception of Russia and Roumania, Italy has fewer railway passengers per head of the population than any of the other countries, and Signor Bodio adds that, while of the available seating accommodation in trains 35 per cent. is occupied in France, 28 per cent. in Belgium, 27½ per cent. in Switzerland, 27 per cent. in Hungary, 25 per cent. in Germany, only 23 per cent. is occupied in Italy. There are no statistics of this matter for our own country. Better, perhaps, for the railway companies that it should be so."

BUSINESS FAILURES.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, JULY 25, 1896.

It is a rather odd state of affairs when the leaders of a party, in what has long been one of the great pivotal states in electoral contests, are forced into a position of hesitating about whether to ratify the ticket and platform adopted by a national convention of the party. This is the situation in New York, where the state leaders of the Democratic party are counseling the members of the party in the state to refrain from action one way or another regarding the ratification of the Chicago ticket until after the meeting of the state convention of the party, which is to be called to hear a report from the delegates to the convention at Chicago and to nominate presidential electors, and take such other action as may be thought best in the premises. Most of the Democratic organizations in the state have respected the request of the state leaders, but a few clubs and committees have taken action, some for and some against the Bryan ticket and platform. The situation is indeed an odd one, and is rendered all the more noticeable because of the lack of any strong, clear suggestion of guidance on the part of the principal state leaders.

The talk of a third ticket has grown during the week, suggestions to that end having come from many gold-standard Democrats in the north and east and the middle west. The lead in the movement for a third ticket to represent the gold-standard Democrats has been taken by the Democrats of Illinois, and on their initiative a meeting of representative Democrats from nine states was held at Chicago this week, at which a resolution was unanimously adopted declaring that there should be a Democratic national convention held, a Democratic platform enunciated and a Democratic ticket nominated, the convention to be held not later than September 2. It will be noticed that the framing of the resolution conveys the implication that the platform adopted at Chicago was not Democratic, a contention insisted upon by the gold-standard men among the Democrats. Ex-Secretary Whitney has come out in an interview in which he declares that the nomination of a third ticket cannot be prevented unless the managers of the campaign for McKinley modify their attitude in relation to the sound-money Democrats and fight the campaign on the issue of sound money alone, burying for the time all other issues, and particularly that with which in the past Mr. McKinley has been so closely identified. Chairman Hackett, of the New York Republican State Committee, asks for specific propositions from Mr. Whitney, and intimates that he is willing to meet that gentleman half way.

It is not usual for the Chamber of Commerce of New York to meet during the summer vacation, but the conditions of the present campaign are regarded as calling for special action on the part of the Chamber. At the instance of the sound-money committee of the Chamber, a special meeting is to be called to consider how the Chamber can best make its influence felt in opposition to the free-coinage movement. It is expected that this meeting will be held next week. The last meeting of the Chamber in vacation time was held three years ago, in order to urge the repeal of the compulsory purchase clause of the Sherman law. It is to be hoped that the special meeting will be well attended, so that the expression of opinion by the Chamber may be made as impressive as possible.

Shareholders in building and loan associations are not likely to be deceived by the arguments of the advocates of free coinage at the ratio of 16 to 1. Their sentiments were voiced in a very decided way in the resolutions adopted by the National Building and Loan Convention at Philadelphia this week. In these resolutions the convention declared that the interests of all shareholders of building and loan associations in the United States demand that the present standard of values, upon which our monetary system has been based since the resumption of specie payments in 1879, shall remain unchallenged and inviolate; that the interests of every class in the community, and especially those of the great wage-earning class, imperatively demand that every dollar in circulation, whether coin or paper, shall be equal in purchasing power, and therefore equal in value, to every other, and that patriotism demands that the dollar bearing the mint mark of the United States shall be the equal of the dollar of the most advanced nations, and entitled to full faith and credit all over the world, and to that end it must be maintained free from all suspicion, debasement or repudiation. Declarations of this character will do much good in the campaign now, and the widest publicity should be given to them, as a means of helping to make the way clear for wavering voters.

An interpretation of the recent civil service order of the President has been prepared by the Civil Service Commission, and has been adopted for the government of all the executive departments. According to this statement the object of the order was to classify all laborers or workmen regularly assigned to work of the same grade as that performed by classified employees; to prohibit the assignment hereafter of unclassified laborers or workmen to work of the same grade as that performed by classified employees, and to require all vacancies in positions of classified laborers or workmen to be filled, in accordance with the civil service rules, through examination and certification by the commission. The order originated from the well-known fact that many employees borne on the rolls as laborers or workmen were performing clerical, watchman, messenger or other work of a classified character. In this way an unclassified service, composed of employees engaged upon classified work, had been rapidly developing in evasion of the civil service law and rules. The executive order referred to was issued for the purpose of correcting this evil and preventing further evasions of the law and rules. Of course the enforcement of the order depends finally upon the action of the respective departments, but the commission suggests that if the departments designate clearly by name those so-called laborers who become classified by the executive order, and those who remain unclassified, the line will be so distinctly drawn that it will hereafter be clearly maintained. The adoption of the statement by the departments would seem to indicate, however, that the order will be carried out in the spirit in which it was framed.

Statistics made public during the course of the last fiscal year pointed to a marked increase in the volume of immigration, and the forecast rendered possible by the earlier figures is borne out by the completed statistics for the year. A statement recently prepared by the Commissioner of Immigration shows the number of immigrants who arrived in this country during the fiscal year ended June 30, 1896, to have been 343,267, as compared with 258,536 during the fiscal year 1895. This represents an increase of not far from a third as compared with the figures of last year. The whole number debarred and returned during the year was 3,037, as follows: Paupers, 2,010; contract laborers, 776; idiot, 1; insane, 10; diseased, 2. Those returned within one year because of their having become public charges numbered 238. The number debarred and returned in 1895 was 2,596. It is worthy of note, as indicating the race character of the new immigration, that both Italy and Austria-Hungary sent more immigrants than the United Kingdom, while Russia stood fourth on the list as a source of the new additions to our population.

Some of the figures regarding railway capital given in the annual report of the statistician of the Interstate Commerce Commission for the fiscal year ending June 30, 1895, are of interest, though they are somewhat belated. It appears that the amount of railway capital on June 30, 1895, was $10,985,203,125, or $63,330 per mile of line, an increase during the year of $188,729,312. Railway capital was distributed as follows: The capital stock amounted to $4,961,258,656, of which $5,201,697,351 was common stock and $759,561,305 preferred srock; funded debt, $5,407,114,313; classified as bonds, $4,659,873,548; miscellaneous obligations, $445,221,472; income bonds, $246,103,966, and equipment trust obligations, $55,915,327. Current liabilities amounted to $616,830,156; of the capital stock outstanding, $1,169,071,178, or 23.57 per cent., was owned by the railway corporations, as well as $437,508,841, or 9.30 per cent., of bonds outstanding. These figures show an increase in the corporate ownership of securities, which is regarded as probably rather due to railway consolidation than to the strengthening of reserve funds.

It appears that stock to the amount of $3,475,640,203, or 70.05 per cent. of the total outstanding, paid no dividend, and $904,436,200, or 16.90 per cent. of funded debt, exclusive of equipment trust obligations, paid no interest during the year covered by the report. In no other year since the organization of the division of statistics has so large a percentage of stock passed its dividends; or, except in 1894, has so large a percentage of funded debt defaulted its interest. Of the stock paying dividends, 6.89 per cent. of the total stock outstanding paid from 4 to 5 per cent.; 5.39 per cent. of this stock paid from 5 to 6 per cent.; 4.41 per cent. paid from 6 to 7 per cent., and 3.99 per cent. paid from 7 to 8 per cent. The total amount of dividends was $85,287,543, which would be produced by an average rate of 5.74 per cent. on the amount of stock on which some dividend was declared. The amount of bonds paying no interest was $624,702,293, or 13.41 per cent.; of miscellaneous obligations, $54,498,288, or 12.24 per cent.; of income bonds, $225,235,619, or 91.52 per cent.

BANKERS AID THE SITUATION.

The banks and bankers of the metropolis have again given striking evidence not only of their readiness to work in unison for the protection of business and financial interests, but of the influence in restoring confidence which such action on their part at once creates. At the beginning of the week the uncertainty with regard to the United States Treasury reserve was having a decidedly unsettling influence upon the money market, and, through it, upon all business. Gold shipments to Europe by the steamers leaving this port on Tuesday and Thursday last amounted to about $5,000,000, all of which was provided for by withdrawals against legal tenders presented at the Treasury and redeemed from the already depleted gold reserve. Under the pressure of these demands, coupled with the withdrawal of a certain amount of gold for Canadian institutions and the petty but still important drain from institutions or individuals who desire to hoard gold, the specie redemption fund had, by Thursday night, been reduced to a little over $86,000,000, or $14,000,000 below the level which has been fixed upon as its normal and safe limit.

Even before this reduction in the ultimate redemption fund had reached its limit the leading bankers of this city were at work, and, as will be seen, with success, to meet and check the disturbing influences that would inevitably follow a continuance of this outflow, and the growing danger of an appeal for further bond issues which it inevitably involved. At the close of last week, long before the danger involved in a further decrease of the government gold reserve and the depression of values in the stock and investment markets which it tended to create had reached their height, a number of the leading bankers and bank presidents consulted informally, and, as a result, the matter of bringing the questions before the banking fraternity generally was undertaken by Mr. Frederick D. Tappen, president of the Gallatin National Bank. At the same time the equally important question of securing coöperation on the part of the foreign bankers engaged in the exchange market was assumed by Mr. J. Pierpont Morgan.

The result of these gentlemen's efforts is seen, at the close of the week, in the disappearance of the apprehensive and disturbed feelings which ruled the money and stock markets, and the reassertion of a feeling of confidence that for nearly a month has been lacking among investors and financial interests generally. The twofold task assumed by the gentlemen in question was, in the first place, to secure from national banks and other financial institutions in this and other leading cities the surrender of such a portion of their gold holdings as would restore the Treasury reserve, so rapidly decreasing under the demands made upon it by exporters and those who wish to hoard gold, to its natural limits, and at the same time to secure coöperation on the part of international banking houses, so that not only would artificial exports of gold depending upon the payment of commissions or inducements from foreign governmental and banking interests be avoided for the immediate future, but that there might be a general and therefore effective resistence offered to withdrawals of specie from this country through the concerted action of the houses and interests which alone possess the facilities for carrying out transactions of that character.

In spite of insinuations that some of the banks were influenced by the fact that declining stock values were affecting the quality of the collateral for their loans, and that any effort to liquidate in such cases would be tantamount to precipitating a real panic, the response of nearly all the institutions in New York, and the concurrence of a number in Boston, Philadelphia and Chicago in the proposition, must be ascribed to the generally patriotic disposition of bank officials and directors, and their appreciation of the responsibility towards the business community which the present crisis imposed upon them. Holding, as the New York banks do, something like $60,000,000 of specie, nearly all of which is in gold, the original proposition was that 25 per cent. of the amount, say $15,000,000, should be turned over to the Treasury in exchange for legal tenders. Growing, as the movement has done, in favor both of the banks and business community, it has reached larger proportions than its originators at first anticipated, the total deposits under this head, both in New York and other cities, amounting up to Friday evening to about $17,000,000, and resulting in a restoration of the government specie reserve to about $106,000,000.

No less important, however, is the action of the foreign bankers, upon whose initiative depends the continuance of gold shipments. It has been often pointed out that while no other civilized country is so open to attacks of this character upon its specie redemption reserve, the fault is not with bankers, but with the legislation which thus exposes it. It may also be mentioned that the recent advance in exchange rates and consequent necessity of shipping gold in order to secure a supply of bills has been due not so much to any anxiety on the part of foreign capitalists and bankers generally about the fate of the currency controversy in this country as to the disposition on the part of debtors with open accounts in Europe to meet their obligations before there was any possibility of a premium on gold, and the consequent advance of exchange which it implies. The matter was taken in hand by Mr. Morgan, and at a meeting held in his office on last Wednesday, a committee, representing the most eminent foreign bankers and drawers of exchange on New York, were appointed to suggest a remedy and formulate plans for concerted action on the part of banking interests in this emergency.

The committee which has the question in charge is a thoroughly representative one, though the difficulty and delicacy of their task is apparent. Many rumors on the subject were circulated, one of the most common being that it was in contemplation to form a pool to supply the exchange market with some £10,000,000 to £15,000,000 worth of bills, thus meeting all legitimate requirements for remittances to Europe till the grain and cotton movement in autumn furnishes a natural volume of exchange. Another suggestion has been that the leading foreign houses here shall decline further commissions to procure gold for continental banks and bankers under the familiar arrangements under which a small premium is paid. At any rate, and without the announcement of a definite plan on the part of bankers, the foreign exchange market has undergone a decided change. Rates for demand drafts on London, which were 4.89 early in the week, have fallen to 4.88½, and no gold is to be shipped to-day.

THE QUARTER'S PRICES MOVEMENT.

In recording the movement of prices for staple agricultural and industrial products during the first quarter of the current calendar year in these columns, it was necessary to characterize it as somewhat of a disappointment, particularly after the stimulation to trade and the upward movement of quotations between March and September, 1895. There had been, of course, a falling off in demand in wholesale lines before the Christmas holidays of 1895, and there was a natural sluggishness on the part of retailers in anticipating wants early in the current calendar year. But it was supposed pronounced activity and better prices would show themselves before the middle of the year.

The regular quarterly tabulation of prices for 108 staple articles, raw and manufactured, produce, cattle and meats, showing fluctuations in prices at quarterly intervals during the past five years, is again presented, the most striking feature of which is that 47 items furnished lower quotations on July 1, 1896, than on either April 1 or January 1 this year, 29 of which, or nearly one-half, may be classified as agricultural products. Quotations which were higher on July 1 than on April 1 or January 1 are only 16 in number, of which nearly one-half are products of the farm or garden. These exhibits of the movement of prices during the past six months may be contrasted as follows:

LOWER ON JULY 1 THAN ON APRIL 1 AND JANUARY 1, 1896.

Wheat,	Peas,	Eastern pig,
Corn,	Cotton,	Southern pig,
Oats,	Wool,	Tinplates,
Barley,	Hemp,	Aluminium,
Rye,	Flax,	Lead,
Hogs,	Linseed oil,	Bituminous coal,
Pigs,	Cottonseed oil,	Petroleum, crude,
Milk,	Castor oil,	Petroleum, refined,
Beef,	Olive oil,	Rosin,
Pork,	Mackerel,	Turpentine,
Bacon,	Coffee,	Glass,
Lard,	Tea,	Spruce lumber,
Butter,	Standard sheetings,	Alum,
Cheese,	Print cloths,	Bicarbonate soda,
Sugar,	Ginghams,	Caustic soda.
Beans,	Cotton sheetings,	

HIGHER ON JULY 1 THAN ON APRIL 1 AND JANUARY 1.

Sheep,	Rice,	Copper,
Hams,	Lemons,	Tin,
Potatoes,	Bread,	Resin,
Currants,	Leather,	Nails,
Wool, Australian,	Steel beams,	Rubber.

In addition to the list for which prices were higher on July 1 than on April 1 and on January 1 this year, it should be explained that quotations for horses, eggs, hay, hides, union leather, jute, raw silk, steel billets, quicksilver, southern coke, tar and opium were higher on the 1st inst. than three months ago, but not higher than on January 1 this year, and that quotations for wheat flour, peanuts, southern pig iron, Bessemer pig iron, anthracite coal, brick, phosphate rock and ground bone were higher on July 1 than on January 1, 1896, although lower than they were three months ago. Supplementing the list of articles and products, prices for which were lower on July 1 than on April 1 and on January 1 this year, quotations for wheat flour, beef, mutton, peanuts, Bessemer pig iron, lime and ground bone were all lower on the 1st inst. than three months before, although higher than on January 1.

Some notion of the depression in values since the panic of 1893 may be gained from consideration of the fact that out of more than one hundred staple articles and products quoted in connection herewith, nearly one-half, 45, were quoted lower on July 1 this year than on the corresponding date in 1895, 1894 and in 1892, the year prior to the panic, when business was considered generally prosperous. Below is given a list of items which, by reference to the accompanying tabular exhibit, may be seen to have been lower in price on the 1st inst. than on July 1 last year and the year before and in 1892, of which 27, or more than one-half, are agricultural products:

LOWER ON JULY 1, 1896, THAN ON LIKE DATES IN 1895, 1894 AND 1892.

Corn,	Beans,	Southern pig iron,
Oats,	Potatoes,	Tinplates,
Rye,	Wool,	Aluminium,
Beeves,	Hops,	Lead,
Hogs,	Tobacco,	Hemlock lumber,
Horses,	Phosphate rock,	Paper,
Beef,	Hemp,	Tin,
Pigs,	Jute,	Bituminous coal,
Mutton,	Linseed oil,	Southern coke,
Pork,	Castor oil,	Lime,
Bacon,	Olive oil,	Turpentine,
Ham,	Codfish,	Bicarbonate soda,
Lard,	Salt,	Caustic soda,
Butter,	Lemons,	Print cloths.
Cheese.	Oak leather,	

Contrasting prices on the 1st inst. with those one year ago, sixty-four out of the more than one hundred given are found to be lower, the following in addition to those previously mentioned as being lower at this time than on like dates in three preceding years:

ALSO LOWER ON JULY 1, 1896, THAN ON JULY 1, 1895.

Wheat,	Rice,	Petroleum (2),
Barley,	Hides (2),	Spruce lumber,
Flour,	Leather,	Alcohol,
Sheep,	Bessemer pig iron,	Eastern pig iron,
Coffee,	Steel beams,	Ground bone.
Tea,	Quicksilver,	

Comparing quotations on July 1, 1896, with those on the like date in 1894, a period of extreme depression after the panic of 1893, it will be found that, in addition to the list of quotations which were lower on July 1 this year than on a like date in 1895 and in 1894 and 1892, prices for the following were lower on the 1st inst. than on July 1, 1894:

ALSO LOWER ON JULY 1, 1896, THAN ON JULY 1, 1894.

Barley,	Cottonseed oil,	Pine lumber,
Flax,	Coffee,	Borax,
Australian wool,	Rice,	Phosphate rock,
Cottonseed,	Tar,	Opium.

That there has been some gain in the general tendency of prices within the past two years becomes manifest from the fact that while 64 quotations on July 1 this year were lower than one year ago, only 56 of the more than 100 articles and products quoted were lower on July 1 this year than two years ago, when trade was most depressed, immediately following the panic of 1893. Yet, when comparison is made with July 1, 1892, which may perhaps be regarded as the summit of the period of prosperous business, which began in 1888, it is found that prices for 75 out of more than 100 staple articles, etc., were lower on July 1 this year than on July 1, 1892. Forty-five of these have been given in a preceding grouping, that in which articles and products are mentioned, prices for which were lower on the 1st inst. than for one, two and four years ago. In addition, prices for the following were

LOWER ON JULY 1, 1896, THAN ON JULY 1, 1892.

Wheat flour,	Gingham,	Cottonseed oil,
Wheat,	Cotton sheetings,	Tar,
Sheep,	Southern pig iron,	Glass,
Eggs,	Bessemer pig iron,	Pine lumber,
Peas,	Steel billets,	Spruce lumber,
Australian wool,	Steel rails,	Borax,
Flax,	Steel beams,	Nitric acid,
Tea,	Silver,	Sulphuric acid,
Leather,	Quicksilver,	Ground bone,
Raw silk,	Anthracite coal,	Cottonseed.

As might be expected, the list of quotations which were higher on July 1 this year than in 1894, just after the panic, is most conspicuous among groups, prices for which show advances. There are forty items in this class, as follows:

HIGHER ON JULY 1, 1896, THAN JULY 1, 1894.

Wheat,	Hides (2),	Connellsville coke,
Flour,	Leather,	Petroleum (2),
Sheep,	Raw silk,	Rosin,
Eggs,	Cotton sheetings,	Brick,
Sugar,	Eastern pig iron,	Nails,
Peas,	Bessemer pig iron,	Glass,
Peanuts,	Steel billets,	Spruce,
Currants,	Steel rails,	Carbolic acid,
Cotton,	Steel beams,	Sulphuric acid,
Raisins,	Silver,	Alcohol,
Bread,	Copper,	Quinine,
Mackerel,	Quicksilver,	Rubber.
Molasses,	Anthracite coal,	

As contrasted with July 1, 1895, a period in which there was a moderate advance in

COMPARATIVE PRICES OF 108 STAPLE ARTICLES, RAW AND MANUFACTURED PRODUCTS, PRODUCE, CATTLE AND MEATS,

AT QUARTERLY INTERVALS, SHOWING FLUCTUATIONS IN QUOTATIONS FROM OCTOBER 1, 1891 TO JULY 1, 1896, COVERING THE PERIOD OF RECENT EXTREME DEPRESSION.

quotations, prices on July 1 this year show fewer advances, 31 in number, as follows:

HIGHER ON JULY 1, 1896, THAN JULY 1, 1895.

Peas,	Jute,	Nails,
Peanuts,	Cotton sheeting,	Pine,
Raisins,	Steel billets,	Alum,
Currants,	Steel rails,	Borax,
Cotton,	Silver,	Carbolic acid,
Australian wool,	Copper,	Sulphuric acid,
Hay,	Anthracite coal,	Opium,
Bread,	Cottonseed oil,	Quinine,
Mackerel,	Connellsville coke,	Rubber,
Sugar,	Rosin,	Hay.
Molasses,	Brick,	

Corresponding comparisons with reference to July 1, 1893, after the outbreak of the panic, but before it had had time to have a marked effect on prices of staples generally, and with July 1, 1892, are as follows:

HIGHER JULY 1, 1896, THAN JULY 1, 1893.

Rice,	B. A. hides,	Tar,
Raisins,	Copper,	Nails,
Currants,	Connellsville coke,	Carbolic acid,
Hay,	Crude petroleum,	Alcohol,
Flour,	Refined petroleum,	Quinine,
Molasses,	Rosin,	Rubber.

HIGHER JULY 1, 1896, THAN JULY 1, 1892.

Rice,	Mackerel,	Refined petroleum,
Currants,	B. A. hides,	Rosin,
Cotton,	Hemlock hides,	Brick,
Sugar,	Copper,	Nails,
Hay,	Connellsville coke,	Alum,
Molasses,	Crude petroleum,	Carbolic acid,
Quinine,	Rubber,	Alcohol,
	Opium.	

From this it is plain that, aside from petroleum, a number of drugs and chemicals, hides, and a few agricultural products, prominently rice, cotton and hay, the range of prices of staples has not gotten up to the level reached at the time of or prior to the panic of 1893.

THE POPULIST AND SILVER CONVENTIONS.

Public interest has this week been centered upon St. Louis, where the Populist and Silverite conventions have been in session. Ordinarily the doings of these organizations would not attract a great share of public attention, but this year conditions are of such a nature that the proceedings of the conventions may have important consequences. It must be borne in mind that the Populist party cast over a million votes at the last presidential election and got the electoral votes of four states as the result of a fusion with the Democrats. It is many years since a third party carried so large a proportion of the total popular vote. Apart from this, however, has been the probability of the indorsement of the candidate of the Chicago Convention by the gatherings held at St. Louis—a probability which seems to have been made a certainty this week as the result of considerable management on the part of Mr. Bryan's supporters.

Of the two conventions which met at St. Louis this week that of the Populists naturally attracted the greatest share of attention, representing, as it did, the larger number of voters. From the outset the practical work of the convention turned upon the question whether it should indorse or nominate Bryan or should take up another condidate, and while the supporters of Bryan developed great strength, the convention included a strong body of radical members who, representing mainly southern constituencies, fought hard to prevent the indorsement of Bryan, on the ground that to accept even part of the Chicago ticket would involve political suicide for themselves and their party. This element was designated by the name "middle-of-the-road" men, because of their disposition to avoid entangling alliances and to walk politically with neither of the leading parties, but to keep the even tenor of their way apart from them.

The proposition to support Bryan was treated differently by the two conventions. In the silver convention both the temporary and the permanent chairman proposed the indorsement of Bryan, and their suggestion was greeted with applause. In the Populist convention the temporary chairman made no direct reference to an indorsement of the Chicago nominees, but declared his belief that the convention would not turn itself into a Democratic annex or a Republican annex, but would find a way between. Throughout his address he laid stress upon the importance of maintaining the Populist organization intact. One thing seemed plain from the start, namely, that whatever might be the outcome as regarded the indorsement of Bryan, his associate on the ticket could not secure much support from the members of the convention, and it was early proposed to substitute another name for his in case Bryan should be indorsed or nominated.
